Circumstances of Change Request for OMB 0920-1287

The Centers for Disease Control and Prevention (CDC), Division of Global Migration and Quarantine (DGMQ) requests a nonmaterial/non-substantive of the currently approved Information Collection Request: “2019 Novel Coronavirus Airport Entry Questionnaires”.

The Traveler Health Declaration form is an information collection tool used by CDC to facilitate public health follow-up of travelers who may have been exposed to or infected with a communicable disease. Currently, CDC has Office of Management and Budget, Office of Information and Regulatory Affairs approval for a web-based, fillable-PDF, and paper-based Traveler Health Declaration form.

In response to the outbreak of coronavirus disease 2019 (COVID-19), CDC has been tasked with conducting public health assessments at U.S. airports of travelers coming from areas experiencing an outbreak of a novel (new) coronavirus (named “COVID-2019”). The purpose is to detect ill individuals or individuals at risk of being ill with COVID-2019. Currently, CDC is conducting these assessments for travelers from Iran, Ireland, People’s Republic of China (excluding the Special Administrative Regions of Hong Kong and Macau), the Schengen Area of Europe (Austria, Belgium, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Monaco, Netherlands, Norway, Poland, Portugal, San Marino, Slovakia, Slovenia, Spain, Sweden, Switzerland, Monaco, and Vatican City) and the United Kingdom.

CDC has now been tasked with expanding the assessment for travelers from Brazil and may expand to new outbreak areas as the response continues to evolve.

As such, CDC is requesting the following changes to include Brazil, and to incorporate feedback on ways to better improve processes and incorporate the changing nature of the COVID-2019 response:

- Update the **United States Traveler Health Declaration Form** to include the following:
 - Update name of disease to “coronavirus disease 2019 (COVID-19)” pandemic at top of form
 - Remove question about Hubei Province since this is no longer needed to ask specifically and falls within People’s Republic of China in the footnote. (“In the past 14 days, have you been to Hubei Province, China?”)
 - Add Brazil to the list of countries that will be screened on the bottom of the form.
 - Re-order countries in footnote to be in alphabetical order and identify what the United Kingdom includes.

Operationally:

- Travelers coming from Brazil will also be screened
- The paper version of the United States Traveler Health Declaration Form will now be shared with TSA so airlines can provide the form to passengers coming to the United States on flights from Brazil.

Increase in Annualized Total Burden Hours:

The previous burden calculated for this data collection consisted of 2,349,475 hours. As a result of the changes proposed in this change request, and an update of estimates of travelers from other countries as part of the airport entry questionnaire, the new burden will consist of 244,702 hours. Travel from the current countries has reduced significantly, allowing for the total burden to decrease even with the addition of another country. An updated burden table is included below (changes are highlighted).
