<p>The Middle Grades Longitudinal Study of 2017-18 (MGLS:2017) is the first study conducted by the National Center for Education Statistics (NCES) to follow a nationally representative sample of students as they enter and move through the middle grades (grades 6–8). The data collected through repeated measures of key constructs will provide a rich descriptive picture of the academic experiences and development of students during these critical years and will allow researchers to examine associations between contextual factors and student outcomes. The study focuses on student achievement in mathematics and literacy along with measures of student socioemotional wellbeing and other outcomes. The study includes students with disabilities for whom descriptive information on their outcomes, educational experiences, and special education services are being collected. The study conducted an Item Validation Field Test (IVFT) in Winter/Spring 2016 to determine the psychometric properties of assessment and survey items and the predictive potential of items so that valid, reliable, and useful assessment and survey instruments could be developed for the Main Study. An Operational Field Test (OFT) was conducted in Winter/Spring 2017 with a follow-up in Winter/Spring 2018 to test the near-final instruments and recruitment and data collection procedures and materials in preparation for the MGLS:2017 Main Study Base Year (MS1). The MS1 data collection took place in Winter/Spring 2018. OMB has approved recruitment activities for the MS2 data collection, tracking of the MS1 sample, and plans for the MS2 data collection, which is currently ongoing. (OMB# 1850-0911 v.20-26). The current request is to (1) extend the end date for the student data collection one month to July 31, 2020; and (2) add an additional reminder email to sample members. Both changes aim to increase participation and the number of student responses. This request does not increase participant burden or cost to the federal government.</p>
