Assumptions:

^a We have assumed that an average of 9 respondents per year will be subject to 40 CFR subpart L and an average sources will become subject to the rule over the three-year ICR period. Note that the burden for any new source CFR part 60, subpart Kb.

^b This ICR uses the following labor rates: \$120.27 for technical, \$141.06 for managerial, and \$58.67 for clerical Bureau of Labor Statistics, June 2019, "Table 2. Civilian Workers, by occupational and industry group." The rate increased by 110 percent to account for the benefit packages available to those employed by private industry.

^c We have assumed that each respondent will take 0.5 hours to complete the annual maintenance inspection.

- ^{d.} We have assumed that each respondent will take twelve hours twice per year to write semiannual emissions reports.
- ^{e.} We have assumed that each respondent will take thirty-three hours four times per year to file and maintain records.
- ^{f.} We have assumed that each respondent will take two hours twice per year to complete the performance evaluation.
- ^{g.} EFR - External Floating Roof. IFR - Internal Floating Roof.
- ^{h.} We believe that all vessels have been degassed and that all controls have been installed, as they were to be installed.
- ^{i.} We have assumed that two percent of existing sources will request a delay of repair in the annual report.
- ^{j.} We have assumed that no sources will select the option for a fixed roof vented to a control device, and thus have not included this option in the analysis.
- ^{k.} Totals have been rounded to 3 significant figures. Figures may not add exactly due to rounding.
