

OU-6042 RFA Appendix Tables

February 18, 2020

To provide additional insight into the distribution of Medicare beneficiaries with opioid use disorder across different US states and counties the following tables were created:

OU prevalence for Medicare beneficiaries.

Emergency department (ED) visits for OU Medicare beneficiaries.

Hospitalization rates for OU Medicare beneficiaries.

Claims and enrollment data from CMS' Chronic Condition Warehouse (CCW) for CY 2018 were used in the aforementioned tables. The CCW is a database CMS originally established for researchers to study patient chronic conditions but was expanded to be a resource tool to conduct a broad range of studies related to the program.

The following definitions were used when creating the four tables listed above:

Fee for service (FFS) Medicare beneficiaries: Medicare beneficiaries that had Part A and Part B coverage for 2018, and no HMO coverage for all 12 months of 2018.

OU Medicare beneficiaries: Medicare beneficiaries who met any of the three opioid-related sub-indicators of the calendar year:

Diagnosis and Procedure Basis for OU

Opioid-Related Hospitalization or ED visits¹

ED visits: Count of non-denied claims for ED visits. These include both ED visits that result in hospitalization and those that do not result in hospitalization. If two claims for ED visits exist for same beneficiary and same day they are counted towards the total if the claims are submitted by different providers, and they are counted as one claim if the claims are submitted by the same provider.

Hospitalizations: Count of non-denied claims for inpatient and observation stays. If multiple claims exist for same beneficiary with the same admission date they are collapsed into a single inpatient stay. If an observation stay immediately followed by an inpatient stay they are considered a single event and counted only once. The number of observation stays that are not immediately followed by inpatient stays are considered independent events and their total is added to the overall total.

Geographic identifiers: All geographic identifiers are based on Medicare beneficiaries' residences. We use providers' location, so in some instances, beneficiaries that reside in one area but receive services in another area are still counted as part of their residence's area and not as part of the area where they receive their care. The following geographic identifiers are used:

State: Based on SSA state code from beneficiary enrollment file. All 50 states and DC are listed.

State county: Based on SSA state and county from beneficiary enrollment file.

Urban/Rural: Based on CBSA's urban/rural designation.

All States: national figures that include 50 states and DC.

Total ED utilization: Total counts of ED events per region.

Average ED utilization per Medicare beneficiary: (Total ED utilization per region)/(Total number of Medicare beneficiaries from the region)

Total hospitalizations: Total counts of inpatient stays and observation stays per region

Average hospitalization per Medicare beneficiary: (Total inpatient stays and observation stays per region)/(Total number of Medicare beneficiaries from the region)

For a detailed list of diagnoses and procedures see Condition Algorithms <https://www2.ccwdata.org/categories>
