

TANF Data Report - Section Two
 Disaggregated Data Collection for Families
 No Longer Receiving Assistance under the TANF Program

INSTRUCTIONS AND DEFINITIONS

General Instruction: The State agency or Tribal grantee should collect and report data for each data element. The data must be complete (unless explicitly instructed to leave the field blank) and accurate (i.e., correct).

An "Unknown" code may appear only on four data elements: (#15 Date of Birth, #16 Social Security Number, #24 Educational Level, and #25 Citizenship/Alienage). For these data elements, unknown is not an acceptable code for individuals who are members of the eligible family receiving assistance (i.e., family affiliation code "1"). States are not expected to track closed cases in order to collect information on families for months after the family has left the rolls. Rather, States are to report based on the last month of assistance.

1. **State FIPS Code:** Enter your two-digit State code from the following listing. These codes are the standard codes used by the National Institute of Standards and Technology. Tribal grantees should leave this field blank.

2. County FIPS Code: Enter the three-digit code established by the National Institute of Standards and Technology for classification of counties and county equivalents. Codes were devised by listing counties alphabetically and assigning sequentially odd integers; e.g., 001, 003, 005. A complete list of codes is available in Appendix F of the TANF Sampling and Statistical Methods Manual. Tribal grantees should leave this field blank.
3. Tribal Code: For Tribal grantees, enter the three-digit Tribal code that represents your Tribe (See Appendix E of the TANF Sampling and Statistical Methods Manual for a complete listing of Tribal Codes). State agencies should leave this field blank.
4. Reporting Month: Enter the four-digit year and two-digit month code that identifies the year and month for which the data are being reported.
5. Stratum:
Guidance: All families selected in the sample from the same stratum must be assigned the same stratum code. Valid stratum codes may range from "00" to "99." States and Tribes with stratified samples should provide the ACF Regional Office with a listing of the numeric codes utilized to identify any stratification. States that use stratified samples must file section four of the TANF Data Report, which contains the caseload size by stratum for each report month. If a State or Tribe uses a non-stratified sample design or opts to provide data for its entire caseload, enter the same stratum code any two-digit number) for each family.

Instruction: Enter the two-digit stratum code.

FAMILY-LEVEL DATA

Definition: For reporting purposes, the TANF family means (a) all individuals receiving assistance as part of a family under the State's TANF Program; and (b) the following additional persons living in the household, if not included under (a) above:

- (1) Parent(s) or caretaker relative(s) of any minor child receiving assistance;

- (3) Any person whose income or resources would be counted in determining the family's eligibility for or amount of assistance.

6. Case Number - TANF:

Guidance: A closed case is a family whose assistance was terminated for the reporting month, but received assistance under the State's TANF Program in the prior month. A temporarily suspended case is not a closed case. If there is more than one applicable reason for closure, determine the principal (i.e., most relevant) reason. If two or more reasons are equally relevant, use the reason with the lowest numeric code. For example, when an adult marries, the income and resources of the new spouse are considered in determining eligibility. If, at the time of the marriage, the family becomes ineligible because of the addition of the spouse's income and/or resources, the case closure should be coded using code "2". If the family did not become ineligible based on the income and resources at the time of the marriage, but rather due to an increase in earnings subsequent to the marriage, then the case closure should be coded using code "1".
