

Nonsubstantive Change Justification  
National Animal Health Monitoring System (NAHMS) Health Management on U.S. Feedlots 2020  
OMB No. 0579-0079

October 5, 2020

APHIS requests two nonsubstantive changes to information collection request (ICR) 0579-0079. The changes are directly related to the SARS-CoV-19 pandemic.

- a. In response to stakeholder requests, several questions on the VS 21-303, Phase II Questionnaire, were replaced or modified to assess the impact SARS-CoV-19 may have on the producers and industry. There is no net effect on the ICR's projected burden.
  
- b. Due to the SARS-CoV-19 pandemic, the study has been postponed from 2020 to 2021. All references to a 2020 study in the ICR's documents are being changed to 2021. ICR 0579-0079 does not expire until 2023. Unless there are additional delays, APHIS expects the 2021 data collection will be completed prior to the ICR's expiration date.
