Total Capital and O&M Cost (rounded) ^t					
Grand Total (rounded) ^t					

Assumptions:

- ^a There are 43 existing major source facilities subject to the NESHAP. We assume no new sources will become subject during the three-
- ^b This ICR uses the following labor rates: \$147.40 per hour for Executive, Administrative, and Managerial labor; \$117.92 per hour for T labor. These rates are from the United States Department of Labor, Bureau of Labor Statistics, June 2018, "Table 2: Civilian Workers, by" are from column 1, "Total Compensation." The rates have been increased by 110 percent to account for the benefit packages available to
- ^c 23 facilities have add-on controls for compliance. The performance test will affect 12 facilities in the third year. These facilities do not have permits.
- ^d Assumes 10 hours to conduct a CMS performance evaluation and 2 hours to prepare a notification.
- ^e Assumes that all existing facilities have complied with the emissions averaging requirements; new facilities are not allowed to use emissions averaging.
- ^f Assumes 50 percent of the new facilities will submit a pre-compliance report.
- ^g Assumes that the 12 facilities without periodic testing requirements in their permits will do performance testing in year 3. Assume a 5% deviation rate. Assumes all other facilities will comply by submitting engineering calculations and design calculations.
- ^h Assumes 10 percent of the facilities will implement process changes.
- ⁱ Assumes 10 percent will have deviations.
- ^j Assumes 5% of all facilities will report actions taken during a startup, shutdown, or malfunction is not consistent with the plan.
- ^k Assumes all facilities will be subject to the equipment leak standards with an average of 125 hours per report.
- ^l Assumes that 10 percent of existing facilities will use with the emissions averaging reports to comply.
- ^m Assumes 40 hours to develop a record system for recording parameter monitoring information.
- ⁿ Assumes 80 hours to draft the startup, shutdown, and malfunction plan and another 20 hours of review/revisions, for a total of 100 hours.
- ^o Assumes 40 hours to develop/review the QA/QC plan for the CMS. No QA/QC plan is required for the parameter monitoring systems.

^p Assumes no facilities will use the alternative standard, which requires CEMS and QA/QC plans.

^q Assumes 40 hours to train personnel and 16 hours for an annual refresher course.

^r We assume that costs associated with elimination of the SSM exemption include time for re-evaluating previously develop

^s Responses in year one associated with the use of electronic reporting include becoming familiar with CEDRI and the semi

Assumptions:

^a There are 43 existing major source facilities subject to the NESHAP. No new sources are expected to become subject over the three-year period.

^b This cost is based on the following hourly labor rates times a 1.6 benefits multiplication factor to account for government overhead expenses: \$26.38 for Technical and \$26.38 for Clerical. These rates are from the Office of Personnel Management (OPM) “2018 General Schedule” which excludes overtime.

^c Assumes that the 12 facilities without periodic testing requirements in their permits will do performance testing in year 3. All facilities calculations based on: materials usage, materials HAP content, and control efficiency from testing (if applicable).

^d Assume a 5% failure and re-test rate (12 x 0.05 = 0.6, rounded up to 1).

^e Assumes no performance evaluations are required for the parameter monitoring systems included in the rule.

^f Assumes that all existing facilities have already submitted emissions averaging plans.

^g Assumes 50 percent of the new facilities will submit a pre-compliance report.

^h Assumes all facilities will comply by submitting engineering calculations, design calculations, etc. with no performance tests.

- ⁱ. Assumes 10 percent of the facilities will implement process changes.
- ^j. Assumes 10 percent will have deviations.
- ^l. Assumes 5% of all facilities will report actions taken during a startup, shutdown, or malfunction is not consistent with the plan.
- ^m. Assumes all facilities will be subject to the equipment leak standards.
- ⁿ. These are costs associated with evaluating new SSM record systems in year one.
- ^o. Totals have been rounded to 3 significant figures. Figures may not add exactly due to rounding.
