

Supporting Statement - Part B
Submission of Information for the Hospital Inpatient Quality Reporting Program

Collection of Information Employing Statistical Methods

1. Describe potential respondent universe.

All hospitals receiving reimbursement under the Inpatient Prospective Payment System (IPPS) in the United States constitute the potential respondent universe; approximately 3,300 IPPS hospitals and 1,100 non-IPPS hospitals.

2. Describe procedures for collecting information.

Data are submitted via a secure website. Patient-level data are submitted directly to CMS, while summary or aggregate data are submitted directly to CMS or to the Centers for Disease Control and Prevention (CDC) National Health Safety Network (NHSN) via Web-based tools.

3. Describe methods to maximize response rates.

The Hospital Inpatient Quality Reporting (IQR) Program is a quality reporting program with the goal of driving quality improvement through measurement and transparency. Hospitals participate by submitting data to CMS on measures of inpatient quality of care and meeting other program requirements outlined in rulemaking. One such requirement is participating in validation for chart-abstracted and electronic clinical quality measures (eCQMs), if selected. CMS encourages hospital response by subjecting hospitals that do not participate, or participate but fail to meet program requirements, to a one-fourth reduction of the applicable percentage increase in their Annual Payment Update under the IPPS for the applicable fiscal year. In addition, CMS removes barriers to responding by providing abstraction and submission tools, educational resources and presentations, outreach and communications about program requirements and deadline reminders, and technical assistance to any hospitals requiring assistance with program requirements.

4. Describe any tests of procedures or methods.

Sampling for Chart-Abstracted Data for the Hospital IQR Program

Under the Hospital IQR Program, hospitals are required to submit to CMS quarterly aggregate population and sample size data for those measures that a hospital submits as chart-abstracted measures (80 FR 49709 through 49710). For more detailed information regarding the history and updates on sampling and case thresholds, we refer readers to the FY 2011 IPPS/LTCH PPS final rule (75 FR 50221), the FY 2012 IPPS/LTCH PPS final rule (76 FR 51641), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53537), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50819), and the FY 2016 IPPS/LTCH PPS final rule (80 FR 49709).

Background History on Validation Policy for Chart-Abstracted Data for the Hospital IQR Program

The Hospital IQR Program adopted validation requirements in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53539 through 53553).

For more detailed information on validation processes for chart-abstracted measures and electronic clinical quality measures, and previous updates to these processes for the Hospital IQR Program, we refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50822 through 50835), the FY 2015 IPPS/LTCH PPS final rule (79 FR 50262 through 50273), the FY 2016 IPPS/LTCH PPS final rule (80 FR 49710 through 49712), the FY 2017 IPPS/LTCH PPS final rule (81 FR 57173 through 57181), the FY 2018 IPPS/LTCH PPS final rule (82 FR 38398 through 38403), and the FY 2019 IPPS/LTCH PPS final rule (83 FR 41607 through 41608).

Validation for chart-abstracted measures has been updated over recent years as the number of chart-abstracted measures has been reduced from the Hospital IQR Program. In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41562 through 41567), we removed four clinical process of care measures, and noted that for the CY 2021 reporting period/FY 2023 payment determination and subsequent years, only one clinical process of care measure (SEP-1) remains in the program for chart-abstracted validation (83 FR 41608).

We adopted the process for validating eCQM data in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57173 through 57181). Validation of eCQM data was finalized for the FY 2020 payment determination and subsequent years (starting with the validation of CY 2017 eCQM data that would impact FY 2020 payment determinations). We refer readers to the FY 2018 IPPS/LTCH PPS final rule (82 FR 38398 through 38403), in which we finalized several updates to the processes and procedures for validation of CY 2017 eCQM data for the FY 2020 payment determination, validation of CY 2018 eCQM data for the FY 2021 payment determination, and eCQM data validation for subsequent years.

Validation Policy for the Hospital IQR Program

The Hospital IQR Program currently selects up to 600 hospitals for chart-abstracted measure validation, of which 400 are selected randomly, and up to 200 are selected using the targeted criteria stated in the FYs 2013 and 2014 IPPS/LTCH PPS final rules (77 FR 53552 through 53553 and 78 FR 50833 through 50834). For eCQMs, the Hospital IQR Program randomly selects an additional sample of up to 200 hospitals that have not been selected for chart-abstracted measure validation. Under these existing policies, we may validate data from up to a total of 800 hospitals for a given year for both chart-abstracted measures and eCQMs.

In the FY 2021 IPPS/LTCH PPS final rule, the Hospital IQR Program is finalizing a proposal to reduce the total number of hospitals selected for validation from up to 800 hospitals to up to 400 hospitals, of which up to 200 will be selected randomly, and up to 200 will be selected using the targeted criteria described above. To be eligible for

random selection for validation, a hospital will have to be a subsection (d) hospital. To be eligible for targeted selection for validation, the hospital will have to be a subsection (d) hospital and meet the targeted criteria.

If selected for validation, hospitals would have to submit eight randomly selected medical records on a quarterly basis. For chart-abstracted cases, that would result in a total of 32 records per year. For eCQM cases, the policy finalized in the FY 2021 IPPS/LTCH PPS final rule to increase the number of quarters for which hospitals are required to report eCQM data results in a total of 16 requested cases from 2 calendar quarters of data affecting the FY 2024 payment determination, 24 requested cases from 3 quarters of data affecting the FY 2025 payment determination, and 32 requested cases over 4 quarters of data affecting the FY 2026 payment determination and for subsequent years.

In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50260), we established an educational review process for validation of chart-abstracted measures. The process was subsequently updated in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38402 through 38403). In this process, hospitals may request an educational review if they believe they have been scored incorrectly or if they have questions about their validation results. In the FY 2021 IPPS/LTCH PPS final rule we are finalizing the proposal to extend this educational review process to include both chart-abstracted and eCQM measures, rather than just chart-abstracted measures.

Validation Response Rates for the Hospital IQR Program

For the Hospital IQR Program, we score hospitals based on an agreement rate between the data elements submitted compared to the data elements identified by a trained CMS abstractor using a standardized protocol. We compute a confidence interval, and if the upper bound of this confidence interval is 75 percent or higher, the hospital passes the Hospital IQR Program validation requirement. If the upper bound is below 75 percent, the hospital fails the Hospital IQR Program validation requirement and would receive an applicable annual reduction to the hospital's APU. For more information, please refer to the FY 2019 IPPS/LTCH PPS final rule (83 FR 41479).

CMS uses these validation efforts to provide assurance of the accuracy of data submitted by hospitals for use in the Hospital IQR Program. Hospital IQR Program data for selected time periods becomes publicly displayed as required by Section 1886(b)(3)(B) (viii)(VII) of the Social Security Act. This section of the Social Security Act requires the Secretary to report quality measures of process, structure, outcome, patients' perspectives on care, efficiency, and costs of care that relate to services furnished in inpatient settings in hospitals on the Internet website of CMS. The section also requires that the Secretary establish procedures for making information regarding measures available to the public after ensuring that a hospital has the opportunity to review its data before they are made public. Our current policy, as outlined in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50776), is to report data from the Hospital IQR Program as soon as it is feasible on CMS

websites such as the *Hospital Compare* and/or its successor website after a 30-day preview period.

5. Provide name and telephone number of individuals consulted on statistical aspects.
