OMB Control Number: 1625-0102
OMB Expiration Date: 12/31/2020

The Oil Pollution Act of 1990 mandated the creation of a national database of response resources that would be maintained by the Coast Guard NSFCC. This voluntary equipment locator system, known as the Response Resource Inventory (RRI), was expanded in 1995 to accommodate the needs of the Oil Spill Removal Organization (OSRO) Classification initiative.

The RRI includes data received from companies that wish to have their equipment listed in a publicly accessible system, as well as data generated from the OSRO classification program. Participation by private industry is voluntary except for classified OSROs, whose participation becomes mandatory when they apply for a classification.

Through this application, providers can submit their data via the Data Submission Process. If the data is submitted by an OSRO requesting classification, it is processed to determine which requested Captain of the Port (COTP) and operating area classification levels are appropriate. Those results are forwarded to the [National Strike Force (NSF)](#) for additional processing and follow-up.

Pre-defined or customized reports are generated and additional reports on subsets of data can be obtained by contacting the NSFCC. The response resource data is available by resource categories which include skimmers, transfer pumps, boom, vessels, HAZWOPER trained personnel, etc. OSRO-specific reports are placed on the NSFCC's web page for availability to internet users.

NOTICE: The inclusion of proprietary information is NOT authorized. Inappropriate material is subject to removal by the RRI Program Sponsor.

Privacy Notice

AUTHORITY: 33 U.S.C. §1321(j)(2)(A) authorizes the collection of this information.
PURPOSE: To compile and maintain a comprehensive list of qualified spill removal resources, personnel and equipment that will be available to assist Federal and state agencies and the public in the event of a spill incident.
ROUTINE USES: The information will be used by and disclosed to Coast Guard personnel and Federal On-Scene Coordinators in order to coordinate the use of private and public personnel and equipment to aid in the removal of a worst-case discharge, and to mitigate or prevent a substantial threat of such a discharge from a vessel, on or offshore facility, operating in or near an area designated by the President.
DISCLOSURE: The Response Resource Inventory (RRI) is used as part of a voluntary program to classify Oil Spill Removal Organizations (OSROs). While participation in the program is voluntary, OSROs will be unable to gain classification without providing the requested information. OSROs that establish an RRI account, but fail to provide all requested information may be listed in the inventory, but shall be identified as an unclassified OSRO.

The Coast Guard estimates that the average burden for this report is about 12 hours. You may submit any comments concerning the accuracy of this burden estimate or any suggestions for reducing the burden to: Commandant (CG-MER), U.S. Coast Guard Stop 7601, 2703 Martin Luther King Jr Ave SE, Washington, DC 20593-7601 or Office of Management and Budget, Paperwork Reduction Project (1625-0102), Washington, DC 20503.
