Comment:

I think this would be a great proposition considering health is on a lot of people's mind right now. Especially if we can introduce the next generation to a healthier lifestyle. The results from a study like this could have a monumental effect on how the next generation is effected by a future pandemic like covid-19. The extension for this study should be allowed because covid-19 has devastated any chance for this to really make a difference. Health should be on everyone's mind, especially the health of our children. *🌐
