7 Is this a new or existing system?

- ☒ New  
☐ Existing

8 Does the system have Security Authorization (SA)?

- ☐ Yes  
☒ No

8b Planned Date of Security Authorization

☒ Not Applicable

8c	Briefly explain why security authorization is not required	Using multiple authorized systems for the information collection.
10	Describe in further detail any changes to the system that have occurred since the last PIA.	None
11	Describe the purpose of the system.	Concerns have been raised by the public about the safety of recycled tire crumb rubber used in synthetic turf fields and playgrounds in the United States. The specific research objective of this information collection (IC) is to characterize human exposures to potentially harmful constituents of synthetic turf. The data will be used to inform public health policy decisions and to guide future research activities.
12	Describe the type of information the system will collect, maintain (store), or share. (Subsequent questions will identify if this information is PII and ask about the specific data elements.)	A detailed questionnaire will be administered to determine adult and adolescent activities associated with the use of synthetic turf. The information to be collected is: crumb rubber infill related exposure factors (physical activities, activity types, duration of exposure, diet, etc) and demographic information (gender, height, weight, education, race, ethnicity, and age). For children ages 7-9 and youth ages 10-12, the parent/guardian will answer the survey questions. User access is validated by another system and no user credentials are collected, stored, or maintained in this information collection.
13	Provide an overview of the system and describe the information it will collect, maintain (store), or share, either permanently or temporarily.	<p>This IC will use CDC's Epi Info desktop software to collect exposure and demographic information from individuals exposed to synthetic turf. Exposure information is collected to determine how an individual who plays on synthetic turf fields might be exposed to a certain class of chemical(s). Demographic information is collected to determine if certain populations are disproportionately affected and any factors that might be related to an increase in exposure. Data will not be shared outside of the ATSDR study team.</p> <p>No identifiers are collected; only a participant ID is used. Therefore, any data that is collected, maintained, or shared has no direct identifiers.</p>
14	Does the system collect, maintain, use or share PII?	<input type="radio"/> Yes <input checked="" type="radio"/> No
