Subject: Research Determination 33377: A Survey of Venous Thromboembolism Prevention Practices in U.S. hospitals

Dear Nimia:

The proposed project titled “**A Survey of Venous Thromboembolism Prevention Practices in U.S. hospitals**” was reviewed by the NCBDDD Human Subjects Contact and determined to be:

Non-Research: Public Health Practice—Surveillance

The scope of all activities should be limited to public health practice and must not involve research. Since the project is not considered to be research, no further action is required by CDC for human subjects protections in accordance with federal regulation for the protection of human subjects in research.

If the scope of the project or CDC's role changes beyond that described, you must have the project re-reviewed by the NCBDDD Human Subjects Contact in accordance with the federal regulations for the protection of human subjects in research. If you feel this determination requires revision, please email me immediately and a revised determination will be considered.

This is not an OMB-PRA determination. Please see Treana Johnson-James (who is CC'ed on this email) to obtain an OMB-PRA determination. I believe that this survey of institutions will require some type of OMB-PRA clearance.

Please save this email as documentation of the determination, and please email or call me with any questions.

Signed,

Scott
