P30CA006516 Program Information

Reporting Year

Header Description

Program Goals and Impact
 The three primary goals of the Continuing Umbrella of Research Experiences Program at Dana-Farber/Harvard Cancer Center's student training efforts are to increase the numbers of:
 1. Underrepresented minority trainees successfully pursuing careers in biomedicine, cancer research, and/or health disparities.
 2. Trainees receiving graduate degrees and/or professional degrees in those areas.

Trainee Selection

Recruitment Strategies
 Our program recruits Massachusetts high school students and undergraduates who are either members of underrepresented racial or ethnic minorities, low income, and/or first generation college/college-bound. We draw on established relationships with Boston Public Schools such as the John D. O'Bryen School of Mathematics and Science and the Boston Latin School and with other Boston area schools to recruit solid candidates. The Boston Private
656 characters remaining

Selection Process/Criteria
 The CURE Program uses a comprehensive process to select students who will benefit the most from the CURE experience. Priority is given to underrepresented students with demonstrated interest in cancer and cancer disparities research, high levels of motivation, strong academic records, and/or other academic accomplishments. Interested students complete an online application that includes basic contact, demographic, and academic information.
2466 characters remaining

Mentor Matching Process
 Upon acceptance to the CURE Program, mentor assignments are made by program administrative staff based on the students' academic and extracurricular experiences, their expressed interest in a particular area of research, DF/HCC research project, and/or self-identification of a DF/HCC mentor, and their interview with Advisory Committee members. Participant research projects are determined based on availability of research projects related to the mentor's research project and through the use of criteria jointly established by the mentor and the mentee. We place students across the

Program Training Activities

Individual Mentored Research Project for Trainees? Yes No

Research Skills for Trainees Knowledge and Expertise
 At the beginning of their CURE experience, our students participate in an intensive two to three day program orientation specifically tailored to the needs and questions of novice researchers from underrepresented populations aiming to conduct cancer research. We emphasize articulating and refining goals
421 characters remaining

Didactic Lessons
 An important hallmark of successful research is the consumption and distillation of a wide variety of information. Future cancer researchers must be current in findings of their field, and cognizant of an array of interventions, including scientific methods, research design, ethics, genomics and a host of other topics. Our goal is to establish, assess, and enhance the CURE didactic lessons and the lab-based experience with trainees relevant opportunities.
1046 characters remaining

Professional Development
 During the summer and academic year program, CURE students participate in workshops aimed at providing advice and guidance to young researchers for career development. Recent topics have included: science professionalism, presenting scientific presentations, identifying and capitalizing on your
2411 characters remaining

Networking Opportunities for Trainees
 The CURE Program provides many opportunities for students to network with STEM professionals, CURE alumni, and each other. In 2016, our undergraduate students took part in a new networking event hosted at Dana-Farber, "Beyond Academia: Conversations on Health and Life Science Careers", which brought together over 100 students from different Harvard summer programs and 22 "career representatives" from industry, government,
2200 characters remaining

Training for Mentors
 The greatest responsibility for fostering students' connection to their research activities rests on the mentor-scholar relationship. Accordingly, we continue to leverage our relationship with the NIH-funded National Research Mentoring Network (NRMN), administered locally by staff at Boston College, to develop and implement evidence-based research mentor training curricula to support ongoing connection between CURE students and their research groups. We

Holistic Approach (K-12 Programs Only)

Family Involvement
 CURE student family members are invited to our research symposium at the end of the summer and alumni events. Many CURE students brought siblings and parents to watch them present their final projects this past summer. Notably, a number of younger siblings have gone on to apply to and participate in the CURE Program to great success over the course of the past 16 years.
3626 characters remaining

Community Involvement
 All members of DF/HCC are invited to our final research symposium each summer. This year, we opened our author event with Lizzie Stark up to the entire cancer center community. A number of researchers and staff from our member institutions came to Dana-Farber to hear Ms. Stark read from her book and participated in the question and answer session following her reading. Students are encouraged to invite not only family members and friends, but also teachers and meaningful members of their community to hear them present their work. This past summer, we were joined by one of our student's former
