

Identification of behavioral and clinical predictors of early HIV
infection
(Project DETECT)

Attachment 10a

Phase 1 Model Consent Forms (English)

Public reporting burden of this collection of information is estimated to average 15 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to CDC/ATSDR Reports Clearance Officer; 1600 Clifton Road NE, MS D-74, Atlanta, Georgia 30333; Attn: OMB-PRA (0920-1100)

Privacy Act Statement:

This information is collected under the authority of the Public Health Service Act, Section 301, "Research and Investigation," (42 U.S.C. 241); and Sections 304, 306 and 308(d) which discuss authority to maintain data and provide assurances of confidentiality for health research and related activities (42 U.S.C. 242 b, k, and m(d)). This information is also being collected in conjunction with the provisions of the Government Paperwork Elimination Act and the Paperwork Reduction Act (PRA). This information will only be used by the Centers for Disease Control and Prevention (CDC) staff to: 1) characterize the performance of new HIV tests for detecting established and early HIV infection at the point of care (POC), relative to each other and to currently used gold standard, non-POC tests, and 2) identify behavioral and clinical predictors of early HIV infection.

**UNIVERSITY OF WASHINGTON
INFORMATION SHEET
Phase 1 (Presumed Negatives)**

George Ure	Research Study Assistant	206/744-4394
Emergency 24-hour number Dr. Joanne Stekler		206/744-3000

Researchers' statement

We are asking you to be in a research study. The purpose of this consent form is to give you the information you will need to help you decide whether to be in the study or not. Please read the form carefully. You may ask questions about the purpose of the research, what we would ask you to do, the possible risks and benefits, your rights as a volunteer, and anything else about the research or this form that is not clear. When we have answered all your questions, you can decide if you want to be in the study or not. This process is called "informed consent." We will give you a copy of this form for your records.

PURPOSE OF THE STUDY

You are being asked to volunteer for this research study because you have told us that you are not HIV infected and that you have come to this clinic to get an HIV test. The purpose of this research is to understand whether rapid HIV tests can detect HIV in the earliest stage of infection, when people are only beginning to develop anti-HIV antibodies. Approximately 5,000 other people in the Seattle area will also be participating in this study. This study is being conducted by the University of Washington and the Centers for Disease Control and Prevention (CDC). The information below is to help you decide whether to take part in the study.

STUDY PROCEDURES

After reading this statement, if you agree to be in the study, we will ask you to provide a blood sample, oral fluid samples and complete a computer survey.

We will swab your mouth four times to collect oral fluid samples for two rapid tests. We will draw about 4 mL of your blood (less than 1 teaspoon) to use for four or five rapid HIV tests that we will do in the clinic. You will get the results of these tests today. We will draw about 10 mL of your blood (2 teaspoons) for other HIV tests that would be routinely offered to you as part of

your HIV testing visit. These tests will include a test for antibodies to HIV and, if that is negative, an HIV RNA test – which tests your blood for the actual HIV virus. In addition, we will draw about 20 mL of your blood (about 4 teaspoons) for storage for future testing. We will draw these tubes of blood at one time with one needle stick. Altogether, we will draw about 2 tablespoons of blood.

You will also be asked to complete an interview using a computer. The interview will ask you questions about your background, sexual practices and drug use. For example, the interview may ask you about the last time you had sex or if you have ever had an STD in the past. The answers that you give in the interview will not be connected to your name. Only study staff will see the answers you give. Your answers will never be seen by the police, your employer, your health insurance or any health departments. You may refuse to answer any question or item in the interview that you do not wish to answer.

These study procedures should take about 1 ½ to 2 hours to complete.

RISKS, STRESS, OR DISCOMFORT

The oral swab or blood draw could cause a small amount of discomfort, bleeding, or bruising. You may experience increased stress or anxiety while having discussions about HIV infection. We will take steps to minimize any stress or anxiety by providing you with factual information about HIV and risks for getting HIV in language that you can understand. We will answer any questions that you may have.

The questions we will ask you about your sexual behavior and drug use may make you feel uncomfortable. However, you do not have to answer any questions that you do not want to answer and you can stop answering the questions at any time. We will not share your answers with anyone outside of the study, and study staff will not see your name connected to your answers.

As mentioned above, some of your blood and oral fluid samples will be frozen and stored for future testing. These samples will be processed and stored with a study ID instead of your name. No personal information about you (such as your name or birthdate) will be included. UW, the CDC and other researchers may use these samples for research in the future. Nothing that could be linked to you will be kept with these samples. We are not sure what studies might be done in the future. They might include standard tests as done at hospitals, tests for HIV or other viruses, or on your immune system (ability to fight infection). We will not test for

genetic problems or use the blood for cloning or commercial purposes. Because nothing that identifies you will be stored with your samples, we will not be able to provide you with results of testing that we may do in the future.

You may decide to withdraw your permission for your samples to be stored and tested later on. If so, write to the study team to withdraw your permission by September 2025, when the link between your name and your specimen will be permanently destroyed:

Joanne Stekler
Project DETECT
325 9th Avenue, Box 359931
Seattle, WA 98125

You may feel that participating in a research study is a breach of privacy since we are collecting information about you related to your HIV status and may have access to your clinic records. We will take steps to minimize this by talking with you about the research, the purpose of the research, and who may have access to your clinic records as part of this research. We will discuss all of this information with you in a private room.

ALTERNATIVES TO TAKING PART IN THIS STUDY

Your alternative to participating in this study would be to not participate. You will not lose any other benefits in the clinic just because you do not want to be in the study. You may choose to have an HIV test done at the clinic instead of participating in this study.

BENEFITS OF THE STUDY

If you have recently become HIV infected and if any of the rapid HIV tests detect new HIV infections earlier than the test that is normally used, you may learn of your HIV infection several days earlier than you would have if you were not in the study.

SOURCE OF FUNDING

The study team and the University of Washington are receiving financial support from the Centers for Disease Control and Prevention (CDC) to conduct this study.

PROTECTION OF RESEARCH INFORMATION

All of the information you provide will be kept private. However, if we learn that you intend to harm yourself or others or that you or someone you know is being abused, we must report that to the authorities.

We will not record your name or any personal identity information in any part of your research record as part of your participation in this study. The data we collect for the study will be coded with a unique study ID, but some members of the UW study staff team will have access to the link between your personal identity and your study ID to connect information from your clinic record to your study record. The study sponsor, CDC, will not have access to any of your personal identifying information. The link for this data will be destroyed within **five years after** the last date of study enrollment, expected on **September 29, 2020**.

All of the data we collect will be kept in a locked cabinet or password-protected computer files. Results that are published from this study will not include any personal information about you.

If any of your rapid HIV tests show different results, we will help you interpret your results. You may need to wait for results of the lab-based blood tests until you can be certain about your HIV status. We will give you the results of all of the rapid tests while you are in the clinic, and you will get HIV RNA results by phone or a follow-up visit, as you normally would. All of your HIV test results will become part of your regular clinic records, whether you test "confidentially" or "anonymously".

Government or university staff sometimes review studies such as this one to make sure they are being done safely and legally. If a review of this study takes place, your records may be examined. The reviewers will protect your privacy. The study records will not be used to put you at legal risk of harm.

All answers that you give will be kept private. This is so because this study has been given a Certificate of Confidentiality. This means anything you tell us will not have to be given out to anyone, even if a court orders us to do so, unless you say it's okay. But under the law, we must report to the proper authorities suspected cases of child abuse or if you tell us you are planning to cause serious harm to yourself or others.

There are few other limits to this protection. We will voluntarily provide the information to:

- a member of the federal government who needs it in order to audit or evaluate the research;
- individuals at the University of Washington, the funding agency, and other groups involved in the research, if they need the information to make sure the research is being done correctly;

We can't use the Certificate to withhold your research information if you give your written consent to give it to an insurer, employer, or other person. Also, you or a member of your family can share information about yourself or your part in this research if you wish.

OTHER INFORMATION

We will discuss the study with you. You may refuse to participate and you are free to withdraw from this study at any time without any penalty or loss of benefits to which you are otherwise entitled.

There is no cost to you for the study. You will receive \$40 for participating in this study.

RESEARCH-RELATED INJURY

If you think you have a medical problem or illness related to this research, contact Joanne Stekler by paging her (206-744-3000) right away. She will treat you or refer you for treatment.

If you have questions later on about this research study, you can ask one of the researchers listed above. If you have questions about your rights as a research subject, you can call the University of Washington Human Subjects Division at (206) 543-0098.

George Ure	Research Study Assistant	206/744-4394
Emergency 24-hour number Dr. Joanne Stekler		206/744-3000

Researchers' statement

We are asking you to be in a research study. The purpose of this consent form is to give you the information you will need to help you decide whether to be in the study or not. Please read the form carefully. You may ask questions about the purpose of the research, what we would ask you to do, the possible risks and benefits, your rights as a volunteer, and anything else about the research or this form that is not clear. When we have answered all your questions, you can decide if you want to be in the study or not. This process is called "informed consent." We will give you a copy of this form for your records.

PURPOSE OF THE STUDY

You are being asked to volunteer for this research study because you have told us that you are HIV infected and that you have come to this clinic to participate in this study. The main purpose of this research is to understand whether rapid HIV tests can detect HIV in the earliest stage of infection, when people are only beginning to develop anti-HIV antibodies. We also need to make sure the tests are able to detect HIV in persons who know they are infected with HIV, and in people who are taking medicines for their HIV infection. Approximately 5,000 other people in the Seattle area will also be participating in this study. This study is being conducted by the University of Washington and the Centers for Disease Control and Prevention (CDC). The information below is to help you decide whether to take part in the study.

STUDY PROCEDURES

After reading this statement, if you agree to be in the study, we will ask you to provide a blood sample, oral fluid samples and complete a computer survey.

We will swab your mouth four times to collect oral fluid samples for two rapid tests. We will draw about 4 mL of your blood (less than 1 teaspoon) to use for five rapid HIV tests. We will

draw about 10 mL of your blood (2 teaspoons) to send to the laboratory for another antibody test. In addition, we will draw about 20 mL of your blood (about 4 teaspoons) for an HIV RNA test (viral load) and for storage for future testing. We will draw these tubes of blood at one time with one needle stick. Altogether, we will draw about 2 tablespoons of blood.

You will also be asked to complete an interview using a computer. The interview will ask you questions about your background, sexual practices and drug use. For example, the interview may ask you about the last time you had sex or if you have ever had an STD in the past. The answers that you give in the interview will not be connected to your name. Only study staff will see the answers you give. Your answers will never be seen by the police, your employer, your health insurance or any health departments. You may refuse to answer any question or item in the interview that you do not wish to answer.

These study procedures should take about 1 ½ to 2 hours to complete.

RISKS, STRESS, OR DISCOMFORT

The oral swab or blood draw could cause a small amount of discomfort, bleeding, or bruising. You may experience increased stress or anxiety while having discussions about HIV infection. We will take steps to minimize any stress or anxiety by providing you with factual information about HIV in language that you can understand. We will answer any questions that you may have.

The questions we will ask you about your sexual behavior and drug use may make you feel uncomfortable. However, you do not have to answer any questions that you do not want to answer and you can stop answering the questions at any time. We will not share your answers with anyone outside of the study and study staff will not see your name connected to your answers.

As mentioned above, some of your blood and oral fluid samples will be frozen and stored for future testing. These samples will be processed and stored with a study ID instead of your name and no personal information about you (such as your name or birthdate) will be included. UW, the CDC and other researchers may use these samples for research in the future. Nothing that could be linked to you will be kept with the blood. We are not sure what studies might be done in the future. They might include standard tests as done at hospitals, tests for HIV or other viruses, or on your immune system (ability to fight infection). We will not test for genetic problems or use the blood for cloning or commercial purposes. Because nothing that identifies you will be stored with your samples, we will not be able to provide you with results of testing that we may do in the future.

You may decide to withdraw your permission for your samples to be stored and tested later on. If so, write to the study team to withdraw your permission by September 2025, when the link between your name and your specimen will be permanently destroyed:

Joanne Stekler
Project DETECT
325 9th Avenue, Box 359931
Seattle, WA 98125

You may feel that participating in a research study is a breach of your privacy since we are collecting information about you related to your HIV status and may have access to your clinic records. We will take steps to minimize this by talking with you about the research, the purpose of the research, and who may have access to your clinic records as part of this research. We will discuss all of this information with you in a private room.

ALTERNATIVES TO TAKING PART IN THIS STUDY

Your alternative to participating in this study would be to not participate. You will not lose any other benefits in the clinic just because you do not want to be in the study.

BENEFITS OF THE STUDY

You may benefit from this study by learning more about new HIV testing technologies and about HIV health care and support resources in your area. Additionally, you will learn your current viral load as part of your participation in this study.

SOURCE OF FUNDING

The study team and the University of Washington are receiving financial support from the Centers for Disease Control and Prevention (CDC) to conduct this study.

PROTECTION OF RESEARCH INFORMATION

All of the information you provide will be kept private. However, if we learn that you intend to harm yourself or others or that you or someone you know is being abused, we must report that to the authorities.

We will not record your name or any personal identity information in any part of your research record as part of your participation in this study. If you are being seen in the clinic today as well, then the data we collect for the study will be coded with a unique study ID, but some members of the UW study team will have access to the link between your personal identity and your study ID to connect information from your clinic record to your study record. The study sponsor, CDC, will not have access to any of your personal identifying information. The link for this data will be destroyed within **five years after** the last date of study enrollment, expected on **September 29, 2020**.

If you came into the clinic today only for this study, then we will have no link between your identity and your study participation. In order to receive the results of your HIV RNA test (viral load) we will provide you with a card with your study ID, a phone number to call for your test result, and the date after which you should call to receive the result. If you wish to withdraw your permission for your specimens to be stored in the future you will also need to provide us with this study ID in order for us to remove your sample as we will have no other way to link your identity to your specimen. It is important that you **keep this card** if you wish to receive your results or withdraw your permission for your specimens to be stored for future research.

All of the data we collect will be kept in a locked cabinet or password-protected computer files. Results that are published from this study will not include any personal information about you.

If any of your rapid HIV tests show different results, we will help you interpret your results. We will give you the results of all of the rapid tests while you are in the clinic, and you can receive your HIV RNA results by phone.

Government or university staff sometimes review studies such as this one to make sure they are being done safely and legally. If a review of this study takes place, your records may be examined. The reviewers will protect your privacy. The study records will not be used to put you at legal risk of harm.

All answers that you give will be kept private. This is so because this study has been given a Certificate of Confidentiality. This means anything you tell us will not have to be given out to anyone, even if a court orders us to do so, unless you say it's okay. But under the law, we must report to the proper authorities suspected cases of child abuse or if you tell us you are planning to cause serious harm to yourself or others.

There are few other limits to this protection. We will voluntarily provide the information to:

- a member of the federal government who needs it in order to audit or evaluate the research;
- individuals at the University of Washington, the funding agency, and other groups involved in the research, if they need the information to make sure the research is being done correctly;

We can't use the Certificate to withhold your research information if you give your written consent to give it to an insurer, employer, or other person. Also, you or a member of your family can share information about yourself or your part in this research if you wish.

OTHER INFORMATION

We will discuss the study with you. You may refuse to participate and you are free to withdraw from this study at any time without any penalty or loss of benefits to which you are otherwise entitled.

There is no cost to you for the study. You will receive \$40 for participating in this study.

RESEARCH-RELATED INJURY

If you think you have a medical problem or illness related to this research, contact Joanne Stekler by paging her (206-744-3000) right away. She will treat you or refer you for treatment.

If you have questions later on about this research study, you can ask one of the researchers listed above. If you have questions about your rights as a research subject, you can call the University of Washington Human Subjects Division at (206) 543-0098.

**UNIVERSITY OF WASHINGTON
CONSENT FORM
Phase 1 (Early Infection)**

Joanne Stekler, MD MPH	Associate Professor, Medicine	206/744-8312
George Ure	Research Study Assistant	206/744-4394
Emergency 24-hour number Dr. Joanne Stekler		206/744-3000

Researchers' statement

We are asking you to be in a research study. The purpose of this consent form is to give you the information you will need to help you decide whether to be in the study or not. Please read the form carefully. You may ask questions about the purpose of the research, what we would ask you to do, the possible risks and benefits, your rights as a volunteer, and anything else about the research or this form that is not clear. When we have answered all your questions, you can decide if you want to be in the study or not. This process is called "informed consent." We will give you a copy of this form for your records.

PURPOSE OF THE STUDY

You are being asked to volunteer for this research study because you have told us that you recently tested positive for HIV. The purpose of this research is to understand whether rapid HIV tests can detect HIV in the earliest stage of infection, when people are only beginning to develop anti-HIV antibodies. Approximately 5,000 other people in the Seattle area will also be participating in this study. This study is being conducted by the University of Washington and the Centers for Disease Control and Prevention (CDC). The information below is to help you decide whether to take part in the study.

STUDY PROCEDURES

After reading this statement, if you agree to be in the study, we will ask you to provide a blood sample, oral fluid samples and complete a computer survey. We will also ask you to complete a Release of Information form with us to request records of your recent HIV test results from your provider.

We will draw about 4 mL of your blood (less than 1 teaspoon) to use for four or five rapid HIV tests that we will do in the clinic. You will get the results of these tests today. We will draw about 10 mL of your blood (2 teaspoons) for other HIV tests that would be routinely offered to you as part of your HIV testing visit. These tests will include a test for antibodies to HIV and, if

that is negative, an HIV RNA test – which tests your blood for the actual HIV virus. In addition, we will draw about 20 mL of your blood (about 4 teaspoons) for storage for future testing. We will draw these tubes of blood at one time with one needle stick. Altogether, we will draw about 2 tablespoons of blood.

You will also be asked to complete an interview using a computer. The interview will ask you questions about your background, sexual practices and drug use. For example, the interview may ask you about the last time you had sex or if you have ever had an STD in the past. The answers that you give in the interview will not be connected to your name. Only study staff will see the answers you give. Your answers will never be seen by the police, your employer, your health insurance or any health departments. You may refuse to answer any question or item in the interview that you do not wish to answer.

These study procedures should take about 1 ½ to 2 hours to complete.

RISKS, STRESS, OR DISCOMFORT

The oral swab or blood draw could cause a small amount of discomfort, bleeding, or bruising. You may experience increased stress or anxiety while having discussions about HIV infection. We will take steps to minimize any stress or anxiety by providing you with factual information about HIV and risks for getting HIV in language that you can understand. We will answer any questions that you may have.

The questions we will ask you about your sexual behavior and drug use may make you feel uncomfortable. However, you do not have to answer any questions that you do not want to answer and you can stop answering the questions at any time. We will not share your answers with anyone outside of the study and study staff will not see your name connected to your answers.

As mentioned above, some of your blood and oral fluid samples will be frozen and stored for future testing. These samples will be processed and stored with a study ID instead of your name. No personal information about you (such as your name or birthdate) will be included. UW, the CDC and other researchers may use these samples for research in the future. Nothing that could be linked to you will be kept with the blood. We are not sure what studies might be done in the future. They might include standard tests as done at hospitals, tests for HIV or other viruses or on your immune system (ability to fight infection). We will not test for genetic problems or use the blood for cloning or commercial purposes. Because nothing that identifies you will be stored with your samples, we will not be able to provide you with results of testing that we may do in the future.

You may decide to withdraw your permission for your samples to be stored and tested later on. If so, write to the study team to withdraw your permission by September 2025, when the link between your name and your specimen will be permanently destroyed:
