Projected OTTI for AFS and HTM Securities by Portfolio

Institutions that have not adopted ASU 2016-13 should continue to report sub-schedules High-Level OTTI Methodology and Assumptions for AFS and HTM Securities by Portfolio and Projected OTTI for AFS and HTM Securities by Portfolio. Institutions that have adopted ASU 2016-13 should report sub-schedules Expected Credit Loss and Provision for Credit Loss - HTM Securities and Expected Credit Loss and Provision for Credit Loss - AFS Securities.

Please provide the credit loss portion and non-credit loss portion of projected OTTI (for relevant portfolios) for the quarters detailed in the tables below. Responses should be provided in \$Millions. Values should be quarterly, not cumulative.

OTTI related to the security's credit loss is recognized in earnings, whereas the OTTI related to other factors (defined as the non-credit loss portion) is included as part of a separate component of other comprehensive income (OCI). For only those securities determined to be other-than-temporarily impaired, banks should provide both projected losses that would be recognized in earnings and any projected losses that would be captured in OCI.

Amortized Cost should represent all Securities held, regardless of if they are impaired or not.

Only securities projected to experience an other-than-temporary impairment loss in the P&L should be reported in the "Credit Loss Portion" and "Non-Credit Loss Portion" columns below. Securities not projected to be other-than-temporarily impaired (for example, any securities implicitly or explicitly guaranteed by the U.S. government or any other securities for which no OTTI is projected) should not be reported in this tab. OTTI values should be stated as positive values.

Banks should estimate and provide fair market values of AFS securities based on a re-pricing of positions held on the reporting date. Responses for Fair Market Values and Projected OCI should be provided in \$Millions. The "Fair Value Change Rate" should be estimated based on the re-pricing of positions held at the beginning of each quarter. The ratio should be determined based upon the rate of fair value change at a portfolio level based upon a weighted average basis of the change between beginning and ending fair value for each asset (The "Fair Value Change Rate" is not a ratio of projected OCI to Beginning Fair Value). P/L Results in \$Millions	Firmwide Trading Total	Contributions from Higher-Order Risks	Firmwide CVA Hedges Total
1 Equity			
2 FX			
3 Rates			
4 Commodities			
5 Securitized Products			
6 Other Credit			
7 Private Equity			
8 Other Fair Value Assets			
9 Cross-Asset Terms			
10 Total			

1-6) The categories above (Equities, FX, Rates, etc.) are NOT meant to denote lines of business or desks, but rather firmwide totals by risk stripe.

5) "Securitized Products" is defined as the contribution to P/L from exposures detailed on the Securitized Products and Agencies worksheets.

6) "Other Credit" is defined as the contribution from all credit products other than those specified on the "Securitized Products" or "Agencies" worksheets.

9) Cross-Asset Terms are those intra-asset risks attributable to the co-movement of multiple asset classes. For example, an equity option paying off in a foreign currency would have both Equity and FX risk. The P/L due to this co-dependence would be entered into row 9.

(B) Higher order risks are those inter-asset risks attributable to terms not represented in the FR-Y14Q. The highest order term represented in the 14Q will vary based on the specific asset class. For example, the commodity spot vol grids do not capture risks attributable to the co-movement of multiple underlying commodities.

When reporting P/L numbers above, report profits as positive numbers and losses as negative numbers.
