<b>Click on the Next arrow to continue.</b>	

<p><b>Programming Notes:</b>  Each of the text boxes on this screen is a rollover object. Display the information shown below when the mouse is rolled over the rollover object.</p> <p><b>Input</b>  The NFIRS program manager facilitates the input of data into the system at locations throughout a State, county, or fire department:</p> <ul style="list-style-type: none"> <li>• Using the Federal Client Tool.</li> <li>• Using third-party software.</li> </ul> <p><b>Tracking</b>  The NFIRS program manager ensures that transaction files are tracked as they are sent from the firehouse to the fire department, county, or to the State database depending on the program manager's position in the chain of command.</p> <p><b>Quality</b>  The NFIRS program manager ensures that the data are entered correctly and that data are validated at each level in the chain of command.</p>
---

**Conversion**

The NFIRS program manager oversees the conversion of data from one database format to NFIRS 5.0 format. Such conversion might entail either or both of the following:

- Conversion of data from previous versions of NFIRS to version 5.0 format.
- Conversion of data from third-party software format to NFIRS 5.0 format.

**Consolidation**

The NFIRS program manager oversees the consolidation of data received from many sources into a single database file.

**Transfer**

The NFIRS program manager oversees the forwarding of consolidated data from State, county, or fire department to the next level up the chain of command.

**Programming Notes:**  
Each of the text boxes on this screen is a rollover object. Display the information shown below when the mouse is rolled over the rollover object.

**System Use**  
The NFIRS program manager ensures that the system is being used correctly at each level.

**Data Consistency**  
The NFIRS program manager ensures consistency of the data being input into the system through validation.

**Data Conversion**  
The NFIRS program manager ensures that data from all versions of NFIRS is converted correctly for importation into the national database.

**Data Consolidation**  
The NFIRS program manager ensures that the collected data are rolling up to the fire department, county, State, and national levels.

**Data Access**  
The NFIRS program manager ensures that data can be accessed in report form for inclusion in annual reports and to respond to information requests from:

- Other agencies at the State and county level
- The media
- The public

<p><b>Graphic Notes:</b> Develop graphic to represent data flow with boxes labeled Data Quality, Data Tracking, Data Conversion, Data Consolidation, and Data Transfer with the word Communication linking them all together.</p>
<p><b>Programming Notes:</b> Each box in this graphic is a rollover object. Display the information shown below when the mouse is rolled over the rollover object:</p> <p><b>Data Quality</b> Ensuring data quality through review of reports at the local level and through data validation at every level.</p> <p><b>Data Tracking</b> Tracking transaction file receipt from subordinate organizations to ensure that all participating organizations forward data files on a regular basis.</p> <p><b>Data Conversion</b> Converting files from previous NFIRS versions and/or from third-party software tools to NFIRS 5.0 format.</p> <p><b>Data Consolidation</b> Consolidating data files from multiple sources (e.g., firehouses, counties, and departments) into a single file containing all data input by the organization.</p>

**Data Transfer**

Transferring consolidated data to the national database.

**Communication**

Creating and using a comprehensive communication network to support NFIRS 5.0 data flow.

Communication is a two-way effort with information flowing both up and down the chain of command.

Communication is the glue that holds the system together.

**Programming Notes:**  
Each box in this graphic is a rollover object. Display the information shown below when the mouse is rolled over the rollover object:

**National**  
The State NFIRS program manager imports consolidated data into the State partition of the national database.

**State**  
All data forwarded to the State level are validated and consolidated into a State database before transfer to the national database. Data imported using the Federal Client Tool are given a status of UNRELEASED when imported. The State program manager decides when to change the status to RELEASED.

**County**  
All data forwarded to the county level are validated and consolidated into a county database before transfer to the State NFIRS program manager.

**Dept**  
All data forwarded to the department level are validated and consolidated into a department database before transfer to the State NFIRS program manager.

**FH**  
Incident reports input in each firehouse are stored in a local Access 97 or 2000 database before validation and transfer to the county or department NFIRS program manager.

**Programming Notes:**

Each box in this graphic is a rollover object. Display the information shown below when the mouse is rolled over the rollover object:

**National**

The State NFIRS program manager imports consolidated data into the State partition of the national database.

**Federal Client Tool**

All data forwarded to the State level are validated and consolidated into a State third-party software database before transfer to a State Federal Client Tool database. Data are imported into the national database using the Federal Client Tool as a link. Data imported using the Federal Client Tool are given a status of UNRELEASED when imported. The State program manager decides when to change the status to RELEASED.

**State**

All data forwarded to the State level are validated and consolidated into a State third-party software database before transfer directly to the national database. Data imported from third-party vendor software are automatically given a status of RELEASED when imported.

**County**

All data forwarded to the county level are validated and consolidated into a county database before transfer to the State NFIRS program manager.

**Dept**

All data forwarded to the department level are validated and consolidated into a department database before transfer to the State NFIRS program manager.

**FH**

Incident reports input in each firehouse are stored in a local database before validation and transfer to the county or department NFIRS program manager.

<b>Click on the Next arrow to continue.</b>	

**Programming Notes:**  
Each of the text boxes on this page is a rollover object. Display the information shown below when the mouse is rolled over the rollover object:

**UNRELEASED**  
When first imported using the Federal Client Tool, State data have a status of unreleased and only individuals who have access to the State partition can view such data. The State program manager may choose to grant access to the State partition to NFIRS users from other States on a case-by-case basis.

**RELEASED**  
The State program manager determines when to change the status of data in the national database to RELEASED. After release these data can be used in national reports and become part of the public domain.

You have two options: <ul style="list-style-type: none"> <li>❑ Use the Federal Client Tool as a link to the national database.</li> <li>❑ Have the national NFIRS system administrator import your data into the national database.</li> </ul> </li> </ul>																																
<b>Tools</b>																																	
<b>Links</b>																																	

- ❑ Determine how data will be input into the system. You have two options:
  - ❑ Input incident reports into a local database on PCs located in the firehouse.
  - ❑ Input incident reports directly into the national database via the Internet.
- ❑ Determine how data files will be transferred from the firehouse up the chain of command to each level. (Refer to the [Sample Management Plan](#) in the Samples section and the [Procedure for Sending an Incident Report File to the State](#) link in the Links section of the Toolkit.)
- ❑ Determine who will perform the various functions necessary to manage the system. (Refer to the [Staffing Resources Tables](#) in the Tools section of the Toolkit.)

**Back to Top****Data Validation Plan**

- ❑ Establish a detailed Data Validation Plan. (Refer to the [Detailed Discussion of the Validation Process](#) document in the Tools section of the Toolkit and to the [Fire Data Analysis Handbook](#) in the Manuals section of the Toolkit.) Make sure that the plan includes:
  - ❑ Identification of the person(s) responsible for checking data accuracy and completeness of data upon initial entry into the system at the firehouse.
  - ❑ Identification of the person(s) responsible for validating data at each level of the system.
  - ❑ Written procedure for how data validation will be performed.
- ❑ Determine how the consolidated database will be set up to import data files using the Configuration Tool. (Refer to the [National Fire Incident Reporting System NFIRS Configuration Tool](#) manual in the Manuals section of the Toolkit.) You have the following options:
  - ❑ Accept only complete files (files with no errors).
  - ❑ Corrected files must be resubmitted as an ADD.
  - ❑ Accept incomplete files (files with critical or warning level errors).
  - ❑ Corrected files may be resubmitted as a CHANGE.
- ❑ Determine how correction of invalid or incorrect files will be handled. (Refer to the [Sample Management Plan](#) in the Samples section of the Toolkit.) This determinations should include:
  - ❑ How notification of invalid file status will be sent.

- How correction of an incorrect file will be made and who will make it.
- Determine if the entire file will be resubmitted or only the corrected incidents.
- How the corrected file will be transmitted up the chain of command.
- How the corrected file will be incorporated into the consolidated database at each level.
- Establish the timeframe for submittal of corrections.

### **Back to Top**

### **Communication Plan**

- Develop a Comprehensive Communication System.
- Develop a NFIRS 5.0 Participant Contact Database. (Refer to [Sample Contact Database](#) in the Samples section of the Toolkit.) Database should give you the capability to:
  - Track participating units (e.g., counties, departments, and firehouses).
  - Track points of contact at participating units (e.g., names, street addresses, email addresses, phone numbers, and FAX numbers).
  - Track information about participating units (e.g., square mile area protected, population served, number of calls, software used).
- Establish methods for transmitting general information about NFIRS to all levels of the system. You may want to:
  - Publish a paper newsletter. (Refer to [Sample Paper State Newsletter](#) in the Samples section of the Toolkit.)
  - Publish an electronic newsletter via email mass mailings. (Refer to the [Sample Electronic State NFIRS Newsletter](#) in the Samples section of the Toolkit.)
  - Create a web page where information can be posted. (Refer to the [State NFIRS Web Page](#) in the Links section of the Toolkit.)
- Develop a plan for communicating with specific individuals within the chain of command, preferably using email and form letters. This plan should be developed in conjunction with the Transaction File Tracking Plan. It should include procedures to:
  - Acknowledge receipt of transaction files.
  - Send reminders to send transaction files.

- Send notification that data were invalid and must be corrected.
- Receive corrected files for revalidation.

**Back to Top**

**Transaction File Tracking Plan**

- Develop a Transaction File Tracking System to record and track receipt of transaction files from firehouses, departments, and counties.
- Establish a database or spreadsheet for recording receipt of transaction files. (Refer to [Sample Transaction File Receipt Tracking System Spreadsheet](#) in the Samples section of the Toolkit.)
- Establish a file-naming convention for transaction files created at each level of the system. (Refer to [Suggested Policies and Procedures](#) in the Tools section of the Toolkit.)
- Create a computer filing system for transaction files. (Refer to [Sample Computer Filing System for Transaction Files](#) in the Samples section of the Toolkit.) This system should include:
  - A filing location for files upon initial receipt.
  - A filing location for files that cannot be validated and are on hold pending correction.
  - A filing location for files that have been validated and imported into the consolidated database.

**Back to Top**

**Data Conversion Plan**

- Develop a Data Conversion Plan if previous versions of NFIRS have been used. Before developing this plan check the following two documents for background information:
  - The PowerPoint presentation to learn more about data conversion issues. (Refer to [Conversion Issues PowerPoint Presentation](#) in the Tools section of the Toolkit.)
  - The NFIRS 5.0 Data Conversion Tables to determine how data vary from NFIRS 4.0 to NFIRS 5.0. (Refer to the [Data Conversion Tables](#) in the Tools section of the Toolkit.)
- Determine if you will combine NFIRS 4.0 data and 5.0 data or keep the two systems separate. (Refer to the detailed discussion of conversion issues and reports in the [Using NFIRS Data](#) module of the Toolkit.)

**Back to Top**

**User Support Plan**

- ❑ Develop a comprehensive ongoing support plan. (Refer to the [Support](#) module of the Toolkit for details.)

**Back to Top**

**User Training Plan**

- ❑ Develop a comprehensive training plan for the system. (Refer to the [Training](#) module of the Toolkit for details.)

**Back to Top**

**Policies and Procedures To Support the Plans**

- ❑ Write policies and procedures to support the above plans and systems. (Refer to the [Suggested Policies and Procedures](#) document in the Tools section, [Sample State NFIRS Policy Manual Pages](#) and the [Sample State NFIRS Procedure Manual Pages](#) in the Samples section, and the [Links to State Policy and Procedure Pages](#) section in the Links section of the Toolkit.)

**Back to Top**

**Budget To Support the Plans**

- ❑ Develop a budget to support the above plans and systems and consolidate it with the budgets developed for all other aspects of NFIRS. (Refer to the [Planning](#), [Marketing](#), [Using NFIRS Data](#), [Training](#), and [Support](#) modules of the Toolkit for additional budget items.)

**Back to Top**

Click on the Next arrow to continue.

**Programming Notes:**

Locate Print button on this screen. When the Print button is clicked, print the document ManagingTaskList.doc. (**NOTE:** This document will be developed following review of the storyboards. Create hypertext link to the documents or Toolkit sections shown in blue and underlined in the Task List. Make this a single scrollable page. The bulleted section titles on the top of this page will function as buttons. When the buttons are clicked, take the user directly to the section of the page where the section begins. Add [Back to Top](#) links at the end of each section to return the user to the top of the page.

	<p><b>Who can make corrections to incident reports?</b></p>	<p>Fire incident reports are official documents and are part of the public record. As a result, only the individual who entered the data into the original document should make corrections to the reports. This means that if an error is found after the incident report is forwarded up the chain of command, it must be returned to the firehouse for correction by the original data entry person.</p>
