

# National Institutes of Health National Center for Advancing Translational Sciences Toolkit for Patient-Focused Therapeutic Development (NCATS Toolkit) Website User Feedback Survey

The screenshot displays the NCATS Toolkit website interface. At the top, a COVID-19 alert banner provides information on where to find the latest public health and research information. Below this is a search bar and social media sharing options. The main navigation menu includes sections like Home, Getting Started, Discovery, and Clinical Trials And FDA Review. The current page is 'Establish Clinical Sites', which features a sidebar with navigation links such as Overview, Clinical Care Networks, Clinical Trial Sites, Tips for Success, Resources, and Provide Your Feedback. The main content area is titled 'Clinical Trial Sites' and contains a paragraph explaining the importance of established clinical centers, followed by a bulleted list of key goals: increasing participation, ensuring participant eligibility, decreasing training time, and ensuring patients receive established care. The footer includes links to Glossary, About, Home, and Disclaimer, along with logos for GARD, RaDaR, and the Toolkit itself, and a note that the site is maintained by the National Center for Advancing Translational Sciences (NCATS).

**COVID-19 is an emerging, rapidly evolving situation.**

**PROVIDE YOUR FEEDBACK**

### Clinical Trial Sites

An established Network of Clinical Centers of Excellence can provide the clinical sites needed for a **clinical trial**. When a new therapy is being tested to determine safety and **efficacy**, it is important that the Sponsor is confident that the **data** collected during the trial is consistent across **clinical research** sites. Using established Centers for clinical trials sites website can:

- **Increase participation** in a **clinical trial**, since the trial will be available at Centers many patients and their families are already going to for their clinical care.
- **Ensure participant eligibility** is correctly determined using the established **diagnostic criteria** for the disease as well as other **clinical trial** specific eligibility requirements.
- **Decrease time** needed to train clinicians and staff in the **clinical trial** procedures and **data** collection for the **clinical trial**.
- **Make sure patients** enrolled in the **clinical trial** are also receiving established clinical care.
