

**Disclaimer:**

The Centers for Disease Control and Prevention (CDC), an agency of the Department of Health and Human Services, is authorized to collect information from individuals, including the Social Security number (if applicable), under provisions of the Public Health Service Act, Section 301 (42 U.S.C. § 243c). The collection of information is voluntary and there is no penalty for not providing it. The data will be used to increase understanding of disease patterns, programs, and communicate new knowledge to the health community. Data will become part of CDC Privacy Act system of records "Testing and Related Data" and may be disclosed: to appropriate State or local public health departments and cooperating health departments; to other Federal agencies as circumstances require; to state and local governments as circumstances require; to researchers in circumstances to conduct further investigations; to organizations to carry out audits and reviews on behalf of HHS; to the courts in litigation, and to a congressional office assisting individuals in obtaining their records. An accounting of the disclosures that have been made available to the subject individual upon request. Except for permissible disclosures expressly authorized by the Privacy Act, disclosure will be made without the subject individual's written consent.

Please refer to the CDC Infectious Diseases Laboratories Test Directory for information on specimen requirements. CDC maintains acceptance criteria to perform laboratory tests on samples obtained from humans pursuant to the Clinical Laboratory Improvement Amendments (CLIA) and accompanying regulations. 42 U.S.C. § 263a; 42 C.F.R. § 493.1241.

Samples transferred to the CDC for testing or any other purpose will become the legal property of the agency unless otherwise specified. Samples will not be returned to the submitting entity.

**Paperwork Reduction Act Information:**

Form Approved

OMB Control No.: 0920-1309

Expiration date: 11/30/2023

Public reporting burden of this collection of information is estimated to average 20 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. This burden estimate does not include the time spent for activities conducted by the agency that sponsor, or conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. Persons are encouraged to comment regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing it. Send comments to: Reports Clearance Officer, 1600 Clifton Road NE, MS D-74, Atlanta, Georgia 30333; ATTN: PRA 0920-1309

## **Introduction:**

File Accessioning is a feature of ELIMS which allows the User to accession one or more specimens into ELIMS as a single operation. The User imports a file from the Global File Accessioning Template (GFAT) and uses the "File Accessioning" function to load the specimen data that may be entered manually or through barcode accessioning by the User using the CDC Specimen Submission Form (Form 50.34). The User receives confirmation of the import to the User when the import is completed.

## **Production Version: 5.2**

### **What is a template/import file?**

The File Accessioning process extracts specimen data from an import file and loads the data into ELIMS. The User creates the template (Excel worksheet), which contains the same data the User enters when accessioning specimens one at a time (using the ELIMS "File Accessioning" function). After the User enters the specimen data into the "File Accessioning" template, the Excel worksheet (.xlsx) can be imported into ELIMS.

### **Using this template:**

1. This file contains three "File Accessioning" templates (Excel worksheets): Human, Animal, and FEMB (Food, Environmental, Medical Device, Biologic). Each template has an "Origin" tab which defines the origin of each specimen. The file can contain specimens in each "Origin" tab if you are accessioning multiple origins, and it will create multiple specimens. Each row of information represents a new specimen or aliquot record for a specimen that is being imported. The following fields are required:

- Package ID - Blank, if not specified
- CSID - Auto-populated, if not specified
- CUID - Auto-populated, if not specified
- Origin - Valid values are: "Human," "Animal," "Food," "Environmental," "Medical Device," or "Biologic." Origin is required.
- Test order name - Blank, if not specified

3. Picklists are used for many of the cells within each template (Excel worksheet). These lists contain the same values in the CDC Specimen Submission Form (Form 50.34).

4. After the User enters all of the specimen data into the "File Accessioning" template (.xlsx), the Excel worksheet is saved and the import file can have specimen data in each of the worksheet tabs (Human, Animal, and FEMB).

### **5. Specifying specimens, aliquots, and subsamples:**

- Each row containing a blank or unique CSID value will be a new specimen.
- Aliquots will be created for each row with an existing CSID in the current GFAT and a unique or blank CUID.
- The GFAT cannot create subsamples (derivites). To batch create subsamples in ELIMS, use the SAIT file found in ELIMS.

**NOTE: If creating a child aliquot in the GFAT, the parent will be the first instance of the specimen's CSID in the file. ELIMS will create aliquots for specimens already in the system, use the SAIT file.**

### **6. "FastLookup" tab and "Short List" checkboxes - The "Short List" checkboxes are a way to tailor the "File Accessioning" template to what the User frequently uses. To set up this feature, perform the following steps:**

- Go to the "FastLookup" tab within the spreadsheet.
- Locate the desired picklist name for customization. The field title will show the correct name.
- Select the desired picklist values from the drop-down menu for the specific field. Do not leave any blank columns between the values.
- To see the full list of values for a picklist, leave the "Short List" checkbox in the "Title" row blank when entering the data.

7. Some of the "Storage Location" fields (Room, Freezer, Shelf, Rack, and Box) have drop-down menus with no picklist values. Location" information can be added by laboratories into the "Storage Location" section of FastLookup. This allows the User to drop-down menus. This will decrease the number of data entry errors when importing into storage locations. To add a laboratory

- Go to QBE Query in ELIMS.
- Choose the QBE template "Storage Locations Metadata."
- Choose the filter set "General."
- Query all storage locations.

• Use the list from QBE to populate the storage locations in FastLookup. Make sure the "Storage Location" types from shelves in the shelf section, etc.).

- Once the Storage Locations are added to the GFAT, save it as a template to ensure easy access to location information

8. Copying and pasting values - It is possible to copy and paste values into the GFAT spreadsheet. If a value pasted into the pic need to change the field value to a valid ELIMS format or the file will fail during accessioning. When copying and pasting into t values only (or this may overwrite the existing GFAT formatting rules). Please contact the ELIMS Support Services Team if you

9. To assign a specimen to an SPHL, the SPHL ID must be specified. To determine the SPHL ID value, the "SPHL Institution Name" name is chosen, the corresponding SPHL ID will appear next to it. This field is for informational use, and the SPHL ID will still no record.

10. To simplify assigning the SPHL ID to a specimen, an "SPHL Institution Name" field is included in the GFAT file next to the "S steps:

- Select the SPHL name from the "SPHL Institution Name" field in a row within the GFAT.
- Select the drop-down menu next to the "SPHL ID" field—the corresponding SPHL ID for the selected institution will a
- Select the SPHL ID.

**NOTE: Even though the SPHL name is selected, the User MUST still select a SPHL ID for it to be populated for the specimen c**

11. The "Event ID" drop-down menu is used to simplify the Event ID selection process using the laboratory's ELIMS list of even Perform the following steps:

- Go to Events Management in ELIMS.
- Right click on the "Events Management" screen and select "Copy to Excel."
- Select the "Event ID" and "Event Name" fields and copy them. If you use a different field (such as "Local Event ID") to
- Go to the "FastLookup" tab in the GFAT file and paste these values in the "Event ID"/"Event Name" fields.
- To assign an event to the GFAT file, go to the appropriate row and select the event name. This will filter the record to

**NOTE: You must still select the Event ID for the record to be assigned to the event.**

#### **Importing a GFAT file into ELIMS:**

1. Navigate to the "File Accessioning" interface by selecting the "File Accessioning" link in the "Login Options" section of ELIM
2. Prepare the GFAT import file. Ensure the file is the most current version (to check the version, select the "Download Global
3. Select the "Import" button on the "File Accessioning" screen.
4. Select the GFAT file for import.
5. Select "Current User" in field titled "When import completes send email to." Next, select the "Import" button. This will caus
6. Select "OK" on the "Batch Import" message. The User will receive a notification email indicating the import is complete. Thi imported.
7. Review the email for the imported batch.
8. Return to the "File Accessioning" interface and select the "Filter By Status" picklist. Select "Passed" from the filter. The User
9. Go to the "Sample Login" screen. Specimens imported through File Accessioning will appear in the Specimen List.
