Requested Change

Please list these fields according to identifying name/number or describe each field, then I will tell you which field has been selected.

Was the selected field transitioning into organic corn production in 2021?

10. What was the source and cost of -- a. (GMO/GE) purchased seed? b. Non-GMO/GE) purchased seed? C. Homegrown seed?

What was the cost for cleaning and treating this seed?

Did the selected field have skip-row corn? A. What was the common skip pattern? B. What was the average width of the skip?

For the 2021 corn crop, was the corn seed1 treated with a pesticide prior to purchase 2 treated with a pesticide after purchase 3 not treated with a pesticide? What was the name of the seed treatment?

For the 2021 corn crop, did you plant a commercial seed product on the selected field?

Added N/A = 4 as an option

Added a grayed out box. Also added the words In 2021.

Added a second portion to the question. Refuge may be adjacent to the field or a separted block with 1/2 mile of the field.

What is the size in acreas of the refuge?

What was the per-acre cost-share or financial assistance payments received for the cover crop?

Do you have a written conservation plan that specifies practices to control soil erosion?

Has the selected field ever been in any conservation contracts for which you or your landlord received (or expected to receive) cost-sharing payments, stewardship payments, or incentive payments? Environmentall Qualify Incentives Program (EQIP) Conservation Stewardship Program (CSP) Conservation Reserve Program (CRP) Other Federal, State, Local or non-government source

Reason

Now, I need to identify a rice field to be used for this survey. The rice field pre-selected for this interview is the:

Included in the 2020 rice survey, include in corn for consistency across surveys

Change present in the 2019 cotton survey Item present in previous surveys (2019 cotton)

Item present in previous surveys (2019 cotton)

rewrite of item, present in 2018 soybeans and 2019 cotton item added in 2018 soybeans and 2019 cotton

Change from asking about previous 5 years of products to a single year of product

in case yes/or is not applicable to ease any confusion

want to know the acres size of the field

item added in 2018 soybeans and 2019 cotton

item added in 2019 cotton

Options for response changed in the 2019 cotton surveys

| Does this practice or activity help satisfy? 1 A federal regulatory requirement 2 | |
|---|--|
| Highly Erodible Land Conservation compliance 3 Does not relate to any regulation or compliance requirement | Options for response changed in the 2019 cotton surveys |
| In 2021, was the corn in the selected field covered by a single or named peril crop insurance policy (e.g. hail, replant, wind, freeze)? | changed question from asking about private crop insurance to asking about single or named peril crop insurance in the 2018 soybeans survey |
| In 2021, was the corn in the selected field covered by more than one single or named peril crop insurance policies (e.g. hail, replant, wind, freeze) | added item into the 2019 cotton survey |
| What was the dollar amount of coverage per acre for the single peril policy covering the selected field? | changed question from asking about private crop insurance to asking about single or named peril crop insurance in the 2018 soybeans survey |
| What was the percent deductible for the single peril policy covering the selected field? | changed question from asking about private crop insurance to asking about single or named peril crop insurance in the 2018 soybeans survey |
| What premium cost per acre did you pay for the single peril policy covering the selected field? | changed question from asking about private crop insurance to asking about single or named peril crop insurance in the 2018 soybeans survey |
| Did you (Or will you) collect an indemnity payment for the selected field from the | changed question from asking about private crop insurance to asking |
| single peril policy during 2021? | about single or named peril crop insurance in the 2018 soybeans survey |
| In 2021, was the corn in the selected field covered by a multi-peril crop insurance policy? | changed question from asking about Federal crop insurance to asking about multi peril crop insurance in the 2018 soybeans survey |
| In what year did you (the operator listed on this field) first purchase multi-peril crop insurance on the selected field? | changed question from asking about Federal crop insurance to asking about multi peril crop insurance in the 2018 soybeans survey |

What was the premium paid for multi peril crop insurancef for the selected field in changed question from asking about Federal crop insurance to asking about multi peril crop insurance in the 2018 sovbeans survey 2021? EXCLUDE any administrative fee Did you or will you collect an indemnity payment for the selected field from multichanged question from asking about Federal crop insurance to asking peril crop insurance during 2021? about multi peril crop insurance in the 2018 sovbeans survey h. How much nitrogen inhibitor did you mix with the nitrogen applied to the selected field? question was added to the 2019 cotton survey Remove the optional statement and ask all respondents to fill out the cost What was the cost per unit of the product? information Reason for question: There growing interest in the use of drone technology in field crop production, but little comprehensive information on how drones are used. This question will provide data on the extent of use and the reasons for use, and will help to evaluate the costs and benefits of current drone technology in corn production. Did you use an unmanned aerial vehicle (UAV, known as a drone) to produce corn on the selected field in 2021? Reason for question: There growing interest in the use of drone technology in field crop production, but little comprehensive information on how drones are used. This question will provide data on the extent of use and the reasons for use, and will help to evaluate the costs and In the selected field, did you use the UAV for any of the following purposes? i. benefits of current drone technology in corn production. weed analysis ii. Spraying herbicide or fungicide. Iii. Insect analysis iv. Insect control v. vield analysis. Vi. Moisture analysis vii. Equipment check Reason for question: There growing interest in the use of drone technology in field crop production, but little comprehensive information on how drones are used. This question will provide data on the extent of use and the reasons for use, and will help to evaluate the costs and benefits of current drone technology in corn production. Did you purchase the UAV? i. what is the replacement cost for the UAV?

Do you pay an annual fee for use of the UAV? i. What is the annual fee for use of the UAV?

Reason for question: There growing interest in the use of drone technology in field crop production, but little comprehensive information on how drones are used. This question will provide data on the extent of use and the reasons for use, and will help to evaluate the costs and benefits of current drone technology in corn production.

Was any of the following GPS-enabled (Global Positioning System) equipment used to produce corn on the selected field in 2021? C. Automatic section control, such as auto sprayer boom controls or automatic section shut offs?

item was added into the 2019 cotton survey, added for consistency across surveys

Please report the variable rate applicator types you used on the selected field to produce this crop....Was a variable rate applicator used on the selected field for -- production. We need to add this question in order to accurately track farm d. Irrigation Applications

Precision agriculture technologies, including those aimed at variable rate application of inputs, are spreading through agriculture. They affect resource use, finances, and the environmental impacts of agricultural finances and productivity.

Additional Information

Due to covid, no face to face is allowed. The cordinal will be selected and then the enumerator will be able to ask the respondent if they have a field clockwise of the cardinal.

Why does the question need to be in ARMS? The survey encompasses a large and representative sample of producers. Because the survey also gathers information on production practices, yields, inputs, and finances, it is the only channel to evaluate the impact of drone adoption of farm productive and financial outcomes.
