

**U.S. DEPARTMENT OF ENERGY
PUBLIC AUDIENCE COMMUNICATIONS PREFERENCES SURVEY**

SURVEY INTRODUCTION AND CONSENT

[DISPLAY TEXT] Thank you for your interest in participating in this survey. The U.S. Department of Energy is conducting a survey in conjunction with its partners such as your State, Local, or Tribal organization to better understand individuals like you and the way that you prefer to receive information. This will help inform the U.S. Department of Energy’s communications with the public and help provide the best services possible from DOE. The survey should take no more than 15 minutes to complete, and your participation is voluntary. The survey data collected will be used for research purposes only, and your responses will be kept private to the extent of the law. All information collected and processed will be done in accordance with local and international data protection laws. Your responses will be combined and shared only through analysis of trends and findings within all reports and communications with the U.S. Department of Energy. For questions or comments concerning this survey, please contact us at: LM@hq.doe.gov.

Note: The survey is being conducted by the U.S. Department of Energy (DOE) under OMB control number 1910-5160. DOE’s Office of Legacy Management, with input and support from the relevant program offices in DOE, is directing the survey, which is being administered by the research firm, Edelman Intelligence. DOE, and its employees and agents, will use the information you provide for statistical purposes only and will hold the information in confidence to the extent permitted by law. If you have any questions or comments regarding this survey, please contact the Enterprise Policy Development and Implementation Officer, Denise Hill at Denise.Hill@hq.doe.gov or 202-586-5848.

DOE LM SITE AND PROGRAM AWARENESS

[DISPLAY] Next, you will read some more information about the U.S. Department of Energy.

[DISPLAY FOR **OPINION DRIVERS** AND **NON-ULP COMMUNITY RESIDENTS**]

The U.S. Department of Energy is a caretaker of America's former nuclear energy legacy. This legacy includes environmental contamination or hazardous waste at over 100 sites across the country. The Department has taken major steps toward fulfilling its commitments to clean up these sites.

Once these sites have been successfully cleaned up and have remedies in place, the Department becomes the federal land manager and steward of the cultural, historical, and natural resources at some of these legacy sites. The Department works closely with federal, state, local, and Tribal governments, and monitors results to ensure public and environmental safety for generations to come.

[SHOW FOR ROCKY FLATS, WELDON SPRING, FERNALD, BLUEWATER, MONTICELLO, AND TUBA CITY COMMUNITY RESIDENTS: One example of a legacy site that has been successfully cleaned up and has remedies in place is [PIPE: SITE] / SHOW FOR SPLIT ROCK COMMUNITY RESIDENTS: One example of a site that is currently being cleaned up and having remedies put in place is the Split Rock Disposal Site. This site is expected to be successfully cleaned up and have remedies in place within the next five years.]

[DISPLAY FOR **ULP COMMUNITY RESIDENTS**]

The U.S. Department of Energy currently manages the Uranium Leasing Program, whereby it leases lands to private industry for mineral exploration

and the development and mining of uranium and vanadium ore – two minerals that are vital to the Nation's security and economic prosperity. In exchange for the leased land, private organizations pay royalties to the Federal Government for all the ore that they produce.

The program oversees a total of 25,000 acres of land in southwestern Colorado, northern New Mexico, and southeastern Utah. The Department continues to administer 31 pieces of land, all located within the Uravan Mineral Belt in southwestern Colorado. Administrative duties include ongoing monitoring and oversight of leaseholders' activities and annual inspections to identify and correct safety hazards or environmental compliance issues.

11. Which of the following do you think are most important for the U.S. Department of Energy to communicate about its legacy sites? Please rank each of the following, with 1 being the most important, and 4 being the least important.

- 1 **Environment:** Coordinating closely with federal, state, and local environmental and public health agencies to monitor the environmental impact of legacy sites through air, soil, and water testing, as needed.
- 2 **Public health and safety:** Transparently sharing information about the role our sites played in America’s nuclear history and the long-term surveillance and maintenance work to prevent public exposure to hazardous waste.
- 3 **Community:** Consulting with tribal nations, state and local government, community organizations and the public; and sometimes returning sites to the community to be reused, such as playgrounds, dog parks, wildlife refuges, or other beneficial spaces.
- 4 **History:** Telling America’s nuclear story by communicating the significant natural, cultural, and historic importance of legacy sites.

- [ASK IF OPINION DRIVER]
12. The U.S. Department of Energy looks for opportunities for some of its legacy sites and property to be reused in various beneficial ways where possible.

Below is a list of different ways that some legacy sites and property could potentially be reused. How interested would you be in seeing the U.S. Department of Energy reuse its legacy sites and property in each of the following ways? [GRID]

[ROWS] [RANDOMIZE]

- A. **Agriculture reuse**, such as livestock grazing, hay production, and livestock improvements
- B. **Community reuse**, such as open spaces, recreational areas, or education facilities for community use
- C. **Commercial and industrial reuse**, such as warehouse or office space
- D. **Renewable energy reuse**, such as solar farms, wind farms, or geothermal power stations

13. Next, you're going to read some more information from the U.S. Department of Energy about radiation and the levels of radiation at some of its legacy sites.

"It's important to remember that uranium and the radiation it emits are naturally occurring, and we are exposed to radiation every day from sources like the sun, soil, and even the foods we eat.

The U.S. Department of Energy's remediation work has reduced radiation levels at many of its legacy sites to a lower level than you might experience in everyday life. These lower radiation levels mean that visiting these public sites does not make you more likely to get cancer."

How important is it for the U.S. Department of Energy to communicate this to the public? [SINGLE SELECT]
