Unique respondents is equal to the largest category of respondents, those who receive the study consent form. Unique nonrespondents is equal to largest category of non-respondents, those who do not complete the 72-month interview. Total respondents + nonrespondents is larger than sample size as some study participants may respond to some data collection activities and be non-respondents for others.

(a) Starting sample = 3,020, the number of active participants at the end of the 72-month interview. Assume 6% attrition per year for Years 7 and 8, so 2,668 will be sent consent forms for the Age 9 study

(b) Assume 40% of respondents will complete Contact Information Form based on completion rates for 63, 66, and 69 Contact Information Form completion rate
