Dear Transplant Consortium Member:

The Patient Education and Support Committee is gathering information about survivorship concerns across interdisciplinary teams. Often, these conversations occur during Day 100+ post-transplant follow-up visits. However, given the specific needs of the individual and your specialty, you may touch on them during pre-transplant visits or the transplant hospitalization.

This survey is organized by body system, organs and psychosocial concerns with three questions associated with each: is the topic addressed, your comfort addressing the topic, and desire for patients to have additional education or resources. Given your professional discipline, some areas may not be applicable to your discussions with patients. Simply click N/A for those items. A Likert scale is used to answer the questions. Space for comments is available for each topic area.

The final question indicates your interest in participating in the development of patient education and resources per topic area. We recognize that your availability may be limited. Indicating 'Yes' does not obligate you to future meetings. You may be able to act as an intermittent consultant. We will gather that information when following up with you.

Please contact Jennifer Hendricks 240-281-6248 or Jennifer Wilder 240-760-6176 with questions about the survey.

Respectfully,

Jennifer Hendricks
