We are soliciting comments on the proposed ICR that is described below.

We are especially interested in public comment addressing the following issues: (1) Is the collection necessary to the proper functions of the USGS; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the USGS enhance the quality, utility, and clarity of the information to be collected; and (5) how might the USGS minimize the burden of this collection on the respondents, including through the use of information technology.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personally identifiable information (PII) in your comment, you should be aware that your entire comment—including your PII—may be made publicly available at any time. Abstract: We have developed an online application for project collaborators and volunteers to watch video clips that were collected from caribou collars (animal-borne video collars) and enter information about the behaviors and habitats observed in the clips. Information collected from the participants will be analyzed to describe caribou foraging behavior, how it varies across the summer, and the factors that influence it. This information is being collected as part of a long-term project to understand how climate variability influences caribou forage conditions, behaviors, distributions, and population dynamics. Results of the analyses will be published in peer-reviewed scientific publications that will be available to the public.
