Section 7 - Tillage Practices

1. Tillage practices such as no-till, strip-till, and reduced tillage (mulch till or ridge-till) manage crop and other plant residue on the soil surface year-round by limiting soil-disturbing activities used to grow and harvest crops.

No-till is planting crops without tilling the soil. Note that knifing in fertilizer is not considered a tillage operation. Strip-till means limiting tillage to only in-row narrow tillage prior to planting and during planting. Reduced tillage means reducing the number and type of yearly tillage operations. In all cases, plant residue is managed to provide cover on the soil surface throughout the year.

Based on the description above, have you ever used no-till, strip-till, or reduced tillage (e.g., mulch till, ridge-till, etc.) at any time on any portion of your operation?
