

Public reporting burden of this collection of information is estimated at 2 hours per response, including the time for reviewing instructions, searching existing data sources, gathering, and maintaining the data needed, and completing and reviewing the collection of information. An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to CDC/Information Collection Review Office, 1600 Clifton Road, NE, MS D-74, Atlanta, GA 30333; Attn: PRA (0920-xxxx).

Core State Injury Prevention Program - Implementation Capacity Development Rubric

Note: Actual data collection will occur through the Partners Portal web interface. See Attachment D, slide 9 for example of this interface that is under development.

Strategy 1: Engage in Robust Data/Surveillance for Public Health Action

Improving and Sustaining Access to Surveillance Systems

1. Access to surveillance and epidemiological expertise

	1	2	3	4	5
--	---	---	---	---	---

	<p>The program may have access to an epidemiologist at this point but has not integrated their expertise throughout the program's activities.</p>	<p>The program works with epidemiologists around data collection and reporting needs, but the program does not have access to surveillance experts whenever needed and does not include surveillance expertise in planning activities.</p>	<p>The program works with epidemiologists around data collection and reporting needs and integrates surveillance expertise in planning activities related to building data systems, improving data validity or timeliness, and improving analyses. However, surveillance experts are not integrated in other activities (implementation planning, evaluation, etc.).</p>	<p>In order to access timely, valid surveillance data in order to identify emerging injury threats and related factors, the program has created a programmatic culture around epidemiology which relies on close partnerships with surveillance experts and integration of surveillance practices.</p> <p>This integration includes epidemiological expertise in planning activities, in identifying populations who experience disproportionate burden and high disparities, in obtaining valid data, in improving data systems, in analyzing data, in creating data products, in implementation planning, and in evaluating outcomes of interest over time.</p>	<p>In order to access timely, valid surveillance data in order to identify emerging injury threats and related factors (and to sustain these activities), the program has created a programmatic culture around epidemiology which relies on close partnerships with surveillance experts and integration of surveillance practices.</p> <p>This integration includes epidemiological expertise in planning activities, in identifying populations who experience disproportionate burden and high disparities, in obtaining valid data, in improving data systems, in analyzing data, in creating data products, in implementation planning, and in evaluating outcomes of interest over time.</p> <p>The program has established hiring practices, contractual language, and regular meeting practices related to surveillance work to ensure continued access to epidemiological expertise now and in the future.</p>
--	---	--	--	--	---

2. Identification of community injury and violence prevention data needs and gaps

1	2	3	4	5
<p>The program may have a sense of data gaps and needs in some areas but lacks a full understanding of data needs across locations and partners.</p>	<p>The program has completed a needs assessment of communities and partners assessing data needs and gaps in existing data resources related to injury outcomes.</p>	<p>The program has completed a needs assessment of communities and partners assessing data needs and gaps in existing data resources.</p> <p>The needs assessment investigated gaps related to data on injury, population (including those who experience disproportionate burden and high disparities), protective factors, risk factors, and shared risk and protective factors.</p>	<p>In order to access timely, valid surveillance data to identify emerging injury threats and related factors (and to sustain these activities), the program has completed a needs assessment of communities and partners assessing data needs and gaps in existing data resources.</p> <p>The needs assessment investigated gaps related to data on injury, population (including those who experience disproportionate burden and high disparities), protective factors, risk factors, and shared risk and protective factors.</p> <p>The program facilitates partnerships and develops a plan to try to address some of these gaps.</p>	<p>In order to access timely, valid surveillance systems to identify emerging injury threats and related factors (and to sustain these activities), the program has established a system with standard operating procedures for conducting routine needs assessment of communities and partners assessing data needs and gaps in existing data resources.</p> <p>The needs assessment investigates gaps related to data on injury, population (including those who experience disproportionate burden and high disparities), protective factors, risk factors, and shared risk and protective factors.</p> <p>When gaps with these needs exist, the program works with partners to fund and implement improvements to surveillance systems.</p>

3. Adherence to surveillance best practices

	1	2	3	4	5
3. Adherence to surveillance best practices					

4. Surveillance data access

	1	2	3	4	5
<p>4. Surveillance data access</p>	<p>The program accesses data for injury and violence needs, but there may still be gaps in data access for other injury and violence topics or related factors.</p> <p>There also may be gaps in the quality of data applied to the work of the program and partner communities.</p>	<p>The program identifies and uses data sources for most key injury outcomes, related injury outcomes, and related factors (risk, protective, and shared risk and protective).</p> <p>These data sources meet at least two of the following:</p> <ul style="list-style-type: none"> • Provide valid and reliable data, • Provide timely data, • Are appropriate to the level of the community work (for example, schools, neighborhoods, counties), • Enable the program to quickly and accurately identify populations who experience disproportionate burden and high disparities, • And/Or help the program track the outcomes and related factors over time. 	<p>The program identifies and uses data sources for all key injury outcomes, any related injury outcomes, and any related factors (risk, protective, and shared risk and protective).</p> <p>These data sources meet at least four of the following:</p> <ul style="list-style-type: none"> • Provide valid and reliable data, • Provide timely data, • Are appropriate to the level of the community work (for example, schools, neighborhoods, counties), • Enable the program to quickly and accurately identify populations who experience disproportionate burden and high disparities, • And/Or help the program track the outcomes and related factors over time. 	<p>In order to reliably identify emerging injury threats and related factors, the program identifies and uses data sources for all key injury outcomes, any related injury outcomes, and any related factors (risk, protective, and shared risk and protective).</p> <p>These data sources:</p> <ul style="list-style-type: none"> • Provide valid and reliable data, • Provide timely data, • Are appropriate to the level of the community work (for example, schools, neighborhoods, counties), • Enable the program to quickly and accurately identify populations who experience disproportionate burden and high disparities, • And help the program track the outcomes and related factors over time. 	<p>In order to reliably identify emerging injury threats and related factors (and to sustain these activities), the program has identified data sources for all key injury outcomes, any related injury outcomes, and any related factors (risk, protective, and shared risk and protective).</p> <p>These data sources:</p> <ul style="list-style-type: none"> • Provide valid and reliable data, • Provide timely data, • Are appropriate to the level of the community work (for example, schools, neighborhoods, counties), • Enable the program to quickly and accurately identify populations who experience disproportionate burden and high disparities, • And help the program track the outcomes and related factors over time. <p>When gaps with these needs exist, the program works with partners to fund and implement other surveillance systems.</p> <p>The program periodically re-evaluates the fit of these data sources and, when new outcomes and factors are identified, ensure they are measured with appropriate data sources.</p>

Access and Use Surveillance Data

5. Surveillance findings

	1	2	3	4	5
5. Surveillance findings	<p>The program intends to access, clean, and analyze data to identify community:</p> <ul style="list-style-type: none"> • Burden for injury outcomes; • Burden for key risk, and shared risk and protective factors; • Burden for other key public health outcomes; • And potential strengths with protective factors. 	<p>The program accesses, cleans, and analyzes data to identify community:</p> <ul style="list-style-type: none"> • Burden for injury outcomes • Burden for key risk, and shared risk and protective factors; • Burden for other key public health outcomes; • And potential strengths with protective factors <p>periodically throughout the grant cycle.</p> <p>At the recommendation of partners, the program compares trends and patterns with other public health areas to draw connections between injury and other public health areas.</p>	<p>The program accesses, cleans, and analyzes data to identify community:</p> <ul style="list-style-type: none"> • Burden for injury outcomes; • Burden for key risk, and shared risk and protective factors; • Burden for other key public health outcomes; • Potential strengths with protective factors; • And populations with disproportionate burden and health disparities <p>periodically throughout the grant cycle.</p> <p>At the recommendation of partners, the program compares trends and patterns with other public health areas to draw connections between injury and other public health areas.</p>	<p>In order to reliably identify emerging injury threats and related factors, the program accesses, cleans, and analyzes data to identify community:</p> <ul style="list-style-type: none"> • Burden for injury outcomes; • Burden for key risk, and shared risk and protective factors; • Burden for other key public health outcomes; • Potential strengths with protective factors; • And populations with disproportionate burden and health disparities <p>every year.</p> <p>The program intentionally compares trends and patterns with other areas to draw connections between injury and other public health areas.</p>	<p>In order to reliably identify emerging injury threats and related factors (and to sustain these activities), the program regularly accesses, cleans, and analyzes data to identify community:</p> <ul style="list-style-type: none"> • Burden for injury outcomes; • Burden for key risk, and shared risk and protective factors; • Burden for other key public health outcomes; • Potential strengths with protective factors; • And populations with disproportionate burden and health disparities. <p>These activities happen multiple times per year and/or the program supports data systems that provide real-time alerts in order to identify emerging trends and outbreaks.</p> <p>The program intentionally compares trends and patterns with other areas to draw connections between injury and other public health areas.</p> <p>The program is continuously supporting training to improve data analyses skills and refine</p>

									methods to answer epidemiological questions quickly and accurately.
--	--	--	--	--	--	--	--	--	---

6. Informing public health actions with surveillance data

	1	2	3	4	5
6. Informing public health actions with surveillance data	The program has not yet used surveillance data to identify gaps and make improvements towards response activities, partner convening, program implementation, or evaluation.	<p>The program uses surveillance data on key injury topic areas to inform public health actions.</p> <p>This includes:</p> <ul style="list-style-type: none"> • Considering aberrant patterns and trends for the current areas of focus; • Identifying gaps in partnerships based on data trends related to key injury topic areas; • Informing, guiding, and adapting interventions that are expected to be effective and high impact for communities; • And selecting interventions based on urgency of outcome burden and trends. 	<p>The program uses surveillance data to inform public health actions.</p> <p>This includes data on:</p> <ul style="list-style-type: none"> • Key injury topic areas; • Key risk factors, protective factors, and shared risk and protective factors; • And other injury topic areas or public health outcomes of interest. <p>The program uses this data by:</p> <ul style="list-style-type: none"> • Considering aberrant patterns and trends for the current areas of focus; • Identifying gaps in partnerships based on data trends related to key injury topic areas; • Engaging and convening partners to fill partnership gaps based on surveillance findings; • Informing, guiding, and adapting interventions that are expected to be effective and high impact for communities; • And selecting interventions based on both the urgency of outcome burden and trends and shared risk and protective factors driving these outcomes. 	<p>In order to reliably identify emerging injury threats and related factors, the program uses surveillance data to inform public health actions.</p> <p>This includes data on:</p> <ul style="list-style-type: none"> • Key injury topic areas; • Key risk factors, protective factors, and shared risk and protective factors; • Other injury topic areas or public health outcomes of interest; • And populations who experience disproportionate burden and high disparities. <p>The program uses this data by:</p> <ul style="list-style-type: none"> • Considering aberrant patterns and trends for the current areas of focus; • Identifying gaps in partnerships based on data trends related to key injury topic areas; • Engaging and convening partners to fill partnership gaps based on surveillance findings; • Informing, guiding, and adapting interventions that are expected to be effective and high impact for communities; • And selecting interventions based on the urgency of outcome burden and trends, 	<p>In order to reliably identify emerging injury threats and related factors (and sustain these activities), the program uses surveillance data to inform public health actions.</p> <p>This includes data on:</p> <ul style="list-style-type: none"> • Key injury topic areas; • Key risk factors, protective factors, and shared risk and protective factors; • Other injury topic areas or public health outcomes of interest; • And populations who experience disproportionate burden and high disparities. <p>The program uses this data by:</p> <ul style="list-style-type: none"> • Considering aberrant patterns and trends for the current areas of focus; • Identifying gaps in partnerships based on data trends related to key injury topic areas; • Engaging and convening partners to fill partnership gaps based on surveillance findings; • Informing, guiding, and adapting interventions that are expected to be effective and high impact for communities; • And selecting interventions based on the urgency of

				<p>shared risk and protective factors driving these outcomes, and identified populations who experience disproportionate burden and high disparities.</p> <p>The program frequently revisits data to identify new gaps, trends, and outbreaks that are both in alignment and are unaligned with current work and practice.</p>	<p>outcome burden and trends, shared risk and protective factors driving these outcomes, and identified populations who experience disproportionate burden and high disparities.</p> <p>The program frequently revisits data to identify new gaps, trends, and outbreaks that are both in alignment and are unaligned with current work and practice. When work is unaligned, the program identifies ways to align work and address gaps.</p>

Translation and Dissemination of Surveillance Products

7. Data sharing and dissemination of surveillance data

	1	2	3	4	5
7. Data sharing and dissemination of surveillance data	The program has not yet developed products tailored for different audiences.	The program develops products for different audiences, including at least two of the following: <ul style="list-style-type: none"> • Sharing data openly when possible, • Sharing methodology and surveillance innovations when possible, • Creating data systems and dashboards to encourage accurate and timely data interpretation, • Creating reports and products for decision makers that are tailored to their needs, • Creating reports and products for different partners that are tailored to their needs, • Creating reports and products for the public that are tailored to their needs, • And/Or publishing findings in academic journals. 	The program develops products for different audiences, including at least three of the following: <ul style="list-style-type: none"> • Sharing data openly when possible, • Sharing methodology and surveillance innovations when possible, • Creating data systems and dashboards to encourage accurate and timely data interpretation, • Creating reports and products for decision makers that are tailored to their needs, • Creating reports and products for different partners that are tailored to their needs, • Creating reports and products for the public that are tailored to their needs, • And/Or publishing findings in academic journals. 	In order to leverage partnerships to increase effectiveness in identifying and responding to emerging injury threats and related factors , the program develops products for different audiences, including: <ul style="list-style-type: none"> • Sharing data openly when possible, • Sharing methodology and surveillance innovations when possible, • Creating data systems and dashboards to encourage accurate and timely data interpretation, • Creating reports and products for decision makers that are tailored to their needs, • Creating reports and products for different partners that are tailored to their needs, • Creating reports and products for the public that are tailored to their needs, • And publishing findings in academic journals. 	In order to leverage partnerships to increase effectiveness in identifying and responding to emerging injury threats and related factors (and to sustain these activities) , the program develops products for different audiences, including: <ul style="list-style-type: none"> • Sharing data openly when possible, • Sharing methodology and surveillance innovations when possible, • Creating data systems and dashboards to encourage accurate and timely data interpretation, • Creating reports and products for decision makers that are tailored to their needs, • Creating reports and products for different partners that are tailored to their needs, • Creating reports and products for the public that are tailored to their needs, • And publishing findings in

				<p>The program works with audiences to understand their needs to inform these products. Surveillance products are aligned with appropriate action steps (for each audience) to ensure data informs action.</p>	<p>academic journals.</p> <p>The program works with audiences to understand their needs to inform these products. Surveillance products are aligned with appropriate action steps (for each audience) to ensure data informs action.</p> <p>The program tracks the learning, projects, and changes that result from partners accessing these products.</p>

8. Integrating a Health Equity lens in Surveillance Activities

	1	2	3	4	5
8. Integrating a Health Equity lens in Surveillance Activities	The program has not yet systematically included a Health Equity lens in surveillance work.	<p>The program considers its ability to measure accurately population differences with current surveillance systems.</p> <p>Differences include:</p> <ul style="list-style-type: none"> • Race • Ethnicity • Religion • Socioeconomic status • Gender • Age • Mental Health • Cognitive, sensory, or physical ability • Sexual Orientation • Gender identity • Geographic location 	<p>The program considers:</p> <ul style="list-style-type: none"> • The ability to measure accurately population differences with current surveillance systems • And methods to reliably analyze population differences. <p>The program considers differences in:</p> <ul style="list-style-type: none"> • Race • Ethnicity • Religion • Socioeconomic status • Gender • Age • Mental Health • Cognitive, sensory, or physical ability • Sexual Orientation • Gender identity • Geographic location 	<p>In order to reliably identify and respond to emerging injury threats and related factors, the program considers:</p> <ul style="list-style-type: none"> • The ability to measure accurately population differences with current surveillance systems, • Methods to reliably analyze population differences, • And cultural humility in tailoring and disseminating data-related products <p>The program considers differences in:</p> <ul style="list-style-type: none"> • Race • Ethnicity • Religion • Socioeconomic status • Gender • Age • Mental Health • Cognitive, sensory, or physical ability • Sexual Orientation • Gender identity • Geographic location 	<p>In order to reliably identify and respond to emerging injury threats and related factors (and to sustain these activities), the program considers:</p> <ul style="list-style-type: none"> • The ability to measure accurately population differences with current surveillance systems, • Methods to reliably analyze population differences, • And cultural humility in tailoring and disseminating data-related products <p>The program considers differences in:</p> <ul style="list-style-type: none"> • Race • Ethnicity • Religion • Socioeconomic status • Gender • Age • Mental Health • Cognitive, sensory, or physical ability • Sexual Orientation • Gender identity • Geographic location <p>The program continuously</p>

reviews aspects of Health
Equity to broaden and refine
this application to
surveillance.

Expanding Topical Expertise

9. Adverse Childhood Experiences (ACEs) specific surveillance capacity

	1	2	3	4	5
9. Adverse Childhood Experiences (ACEs) specific surveillance capacity	The program, while building up general surveillance infrastructures and processes, has not yet built ACEs-specific systems and programs.	To improve ACEs surveillance, the program: <ul style="list-style-type: none"> • Convenes with ACEs experts, • Identifies ACEs-related data gaps and works with partners to rectify these, • Identifies and accesses reliable ACEs data sources, • And creates and disseminates ACEs-specific data products. 	To improve ACEs surveillance, the program: <ul style="list-style-type: none"> • Convenes with ACEs experts; • Identifies ACEs-related data gaps and works with partners to rectify these; • Identifies and accesses reliable ACEs data sources; • Understands community needs related to ACEs and ACEs-specific risk, protective, and shared risk and protective factors; • Identifies populations who experience disproportionate ACEs outcomes; • Monitors for ACEs-related outbreaks, clusters, and emerging threats; • Creates and disseminates ACEs-specific data products; • Adopts a Health Equity lens to understand ACEs in communities; • And generally applies surveillance best practices to ACEs work. 	In order to reliably identify and respond to emerging ACEs threats and related factors , the program: <ul style="list-style-type: none"> • Convenes with ACEs experts; • Identifies ACEs-related data gaps and works with partners to rectify these; • Identifies and accesses reliable ACEs data sources; • Understands community needs related to ACEs and ACEs-specific risk, protective, and shared risk and protective factors; • Identifies populations who experience disproportionate ACEs outcomes; • Monitors for ACEs-related outbreaks, clusters, and emerging threats; • Monitors for connections between ACEs and other injuries; • Guides ACEs-related interventions through data; • Creates and disseminates ACEs-specific data 	In order to reliably identify and respond to emerging ACEs threats and related factors (and to sustain these activities) , the program: <ul style="list-style-type: none"> • Convenes with ACEs experts; • Identifies ACEs-related data gaps and works with partners to rectify these; • Identifies and accesses reliable ACEs data sources; • Understands community needs related to ACEs and ACEs-specific risk, protective, and shared risk and protective factors; • Identifies populations who experience disproportionate ACEs outcomes; • Monitors for ACEs-related outbreaks, clusters, and emerging threats; • Monitors for connections between ACEs and other injuries; • Guides ACEs-related interventions through data; • Creates and disseminates

2. Engagement of key partners

	1	2	3	4	5
2. Engagement of key partners	<p>The program convenes partners who are:</p> <ul style="list-style-type: none"> • Experts in key injury topic areas • And community members from populations who experience disproportionate burden and high disparities. <p>However, the program finds that some experts are missing.</p>	<p>The program convenes partners who are:</p> <ul style="list-style-type: none"> • Experts in key injury topic areas • And community members from populations who experience disproportionate burden and high disparities. 	<p>The program convenes partners who are:</p> <ul style="list-style-type: none"> • Experts in key injury topic areas; • Experts in key risk factors, protective factors, and shared risk and protective factors; • And community members from populations who experience disproportionate burden and high disparities. <p>Convening is intended to improve understanding of community outcomes and the factors that drive them.</p>	<p>In order to leverage partnerships to increase effectiveness in identifying and responding to emerging injury threats and related factors, the program regularly convenes diverse partners.</p> <p>Partners who are regularly engaged include:</p> <ul style="list-style-type: none"> • Experts in key injury topic areas; • Experts in key risk factors, protective factors, and shared risk and protective factors; • Experts with key skillsets (epidemiology, evaluation, policy, implementation, etc.); • Multilateral partners (including decision makers); • Multi-sectoral partners; • And community members from populations who experience disproportionate burden and high disparities. <p>Convening is intended to improve understanding of community outcomes and the factors that drive them.</p>	<p>In order to leverage partnerships to increase effectiveness in identifying and responding to emerging injury threats and related factors (and to sustain these activities), the program has integrated diverse partners throughout all stages of the work, including:</p> <ul style="list-style-type: none"> • Understanding injury burden and outcomes in communities, • Understanding the factors that influence and maintain injury burden, • Understanding populations with disproportionate injury burden and high disparities, • Planning activity development and improvement, • Identifying and tailoring effective activities to prevent injury, • And evaluating practices, programs, and processes related to injury prevention. <p>Partners are regularly convened. Partners who are regularly engaged include:</p> <ul style="list-style-type: none"> • Experts in key injury topic

Partners are strategically convened to fill gaps noticed by environmental scans and needs assessments.

- areas;
- Experts in key risk factors, protective factors, and shared risk and protective factors;
- Experts with key skillsets (epidemiology, evaluation, policy, implementation, etc.);
- Multilateral partners (including decision makers);
- Multi-sectoral partners;
- And community members from populations who experience disproportionate burden and high disparities.

Partners are strategically convened to fill gaps noticed by environmental scans and needs assessments.

Engaging and Integrating Partners

3. Collaborative learning

<i>Engaging and Integrating Partners</i>					
	1	2	3	4	5
3. Collaborative learning	The program convenes partners but typically directs information to partners rather than convening for group learning.	The program collaboratively works with partners to better understand communities and identify their needs, challenges, and strengths of a system.	The program collaboratively works with partners to better understand communities and: <ul style="list-style-type: none"> • Identify the needs, challenges, and strengths of a system; • Identify the connections between injury and other public health issues in communities; • Identify key risk, protective, and shared risk and protective factors; • And identify strategies and actions that are high impact for the communities. 	In order to leverage partnerships to increase effectiveness in identifying and responding to emerging injury threats and related factors , the program collaboratively works with partners to better understand communities and <ul style="list-style-type: none"> • Identify the needs, challenges, and strengths of a system; • Identify the connections between injury and other public health issues in communities; • Identify populations who experience disproportionate burden and high disparities; • Identify key risk, protective, and shared risk and protective factors; • Identify strategies and actions that are high impact for the communities; • And create common questions, beliefs, and understandings about the communities shared 	In order to leverage partnerships to increase effectiveness in identifying and responding to emerging injury threats and related factors (and to sustain these activities) , the program collaboratively works with partners to better understand communities and <ul style="list-style-type: none"> • Identify the needs, challenges, and strengths of a system; • Identify the connections between injury and other public health issues in communities; • Identify populations who experience disproportionate burden and high disparities; • Identify key risk, protective, and shared risk and protective factors; • Identify strategies and actions that are high impact for the communities; • And create common questions, beliefs, and understandings about the

				amongst the group.	communities shared amongst the group. Partners are reconvened for learning when new information or challenges arise.
--	--	--	--	--------------------	---

4. Informing public health actions through partnerships and collaborations

	1	2	3	4	5
4. Informing public health actions through partnerships and collaborations	<p>The program accepts expert advice and insights regarding public health activities but does not actively work with partners to improve these activities. Partner perspectives are not integrated into the program's work.</p>	<p>The program works with partners to collaboratively inform and improve public health actions.</p> <p>This includes at least 4 of the following:</p> <ul style="list-style-type: none"> • Reviewing surveillance data for trends or patterns; • Discussing aberrant patterns and trends for the current areas of focus; • Identifying other missing partners based on data trends related to key injury topic areas; • Identify key needs, challenges, strengths, and factors of the current context that may help identify appropriate interventions; • Informing, guiding, and adapting interventions that are expected to be effective and high impact for communities; • And/Or selecting interventions based on urgency of outcome burden and trends. <p>Partner perspectives are used</p>	<p>The program works with partners to collaboratively inform and improve public health actions.</p> <p>This includes at least 6 of the following:</p> <ul style="list-style-type: none"> • Reviewing surveillance data for trends or patterns; • Discussing aberrant patterns and trends for the current areas of focus; • Identifying other missing partners based on data trends related to key injury topic areas; • Identify key needs, challenges, strengths, and factors of the current context that may help identify appropriate interventions; • Identify populations who experience disproportionate burden and high disparities that may guide appropriate interventions; • Informing, guiding, and adapting interventions that are expected to be effective and high impact 	<p>In order to leverage partnerships to increase effectiveness in identifying and responding to emerging injury threats and related factors, the program works with partners to collaboratively inform and improve public health actions.</p> <p>This includes at least 8 of the following:</p> <ul style="list-style-type: none"> • Reviewing surveillance data for trends or patterns; • Discussing aberrant patterns and trends for the current areas of focus; • Identifying other missing partners based on data trends related to key injury topic areas; • Identify key needs, challenges, strengths, and factors of the current context that may help identify appropriate interventions; • Identify populations who experience disproportionate burden and high disparities that may guide appropriate 	<p>In order to leverage partnerships to increase effectiveness in identifying and responding to emerging injury threats and related factors (and to sustain these activities), the program works with partners to collaboratively inform and improve public health actions.</p> <p>This includes:</p> <ul style="list-style-type: none"> • Reviewing surveillance data for trends or patterns; • Discussing aberrant patterns and trends for the current areas of focus; • Identifying other missing partners based on data trends related to key injury topic areas; • Identify key needs, challenges, strengths, and factors of the current context that may help identify appropriate interventions; • Identify populations who experience disproportionate burden and high disparities that may guide appropriate

to help identify gaps.

- for communities;
- Selecting interventions based on urgency of outcome burden and trends;
- Helping support and implement activities for these processes;
- Helping continually reassess if current work is aligned with new gaps, trends, and outbreaks;
- Helping evaluate existing processes and programs;
- And/Or helping improve existing processes and programs based on evaluation data.

- Partner perspectives are used to help
- Identify gaps
 - And identify barriers and facilitators.

- interventions;
- Informing, guiding, and adapting interventions that are expected to be effective and high impact for communities;
- Selecting interventions based on urgency of outcome burden and trends;
- Helping support and implement activities for these processes;
- Helping continually reassess if current work is aligned with new gaps, trends, and outbreaks;
- Helping evaluate existing processes and programs;
- And/Or helping improve existing processes and programs based on evaluation data.

- Partner perspectives are used to help
- Identify gaps;
 - Identify barriers and facilitators;
 - And brainstorm improvements.

 - Identify barriers and facilitators;
 - And brainstorm improvements.

Partners are encouraged to share their own data, findings, and work in brainstorming and discussion.

5. Partner support, growth, and training

	1	2	3	4	5
5. Partner support, growth, and training	The program does not provide any training, technical assistance, or resource referrals for partners.	When a particularly good training or existing resource is shared with the program, the program passes it on to partners. The program does not systematically look for particular types of resources or categories of resources.	The program works to ensure that partners are equipped with skillsets essential for effective injury prevention by providing resources and training referrals for topical expertise and/or functional capacity improvement	In order to leverage partnerships to increase effectiveness in responding to emerging injury threats and related factors, the program works to ensure that partners are equipped with skillsets essential for effective injury prevention by providing resources and training referrals for: <ul style="list-style-type: none"> • Topical expertise, • Health Equity, • Surveillance expertise, • Implementation expertise, • Evaluation expertise, • Partnership expertise, • And economic expertise. 	In order to leverage partnerships to increase effectiveness in responding to emerging injury threats and related factors (and to sustain these activities), the program works to ensure that partners are equipped with skillsets essential for effective injury prevention by providing resources and training referrals for: <ul style="list-style-type: none"> • Topical expertise, • Health Equity, • Surveillance expertise, • Implementation expertise, • Evaluation expertise, • Partnership expertise, • And economic expertise. The program is continuously evaluating the need to add additional trainings or context-specific support.

Sustaining and Expanding Relationships

6. Regional and national networking

<i>Sustaining and Expanding Relationships</i>					
	1	2	3	4	5
6. Regional and national networking	The program attends meetings with regional and national partners but is not an active participant.	The program actively participates in regional and national networking, including at least one meeting beyond the regularly occurring Regional Network Coordinating Organization meetings. Networking activities include at least two of the following: <ul style="list-style-type: none"> • Exchanging knowledge and findings, • Sharing technical assistance resources, • Sharing innovations and lessons learned, • Sharing emerging findings, • Creating time for shared brainstorming and discussion, • And/Or collaborating on projects. 	The program actively participates in regional and national networking, including at least one meeting beyond the regularly occurring Regional Network Coordinating Organization meetings. This includes at least three of the following: <ul style="list-style-type: none"> • Exchanging knowledge and findings, • Sharing technical assistance resources, • Sharing innovations and lessons learned, • Sharing emerging findings, • Creating time for shared brainstorming and discussion, • And/Or collaborating on projects. Strategy 3: Conduct Assessment and Evaluation for Public Health Action

Assessment and Evaluation Systems

1. Access to assessment and evaluation expertise

Strategy 3: Conduct Assessment and Evaluation for Public Health Action					
Assessment and Evaluation Systems					
	1	2	3	4	5
1. Access to assessment and evaluation expertise	The program may have access to an assessment expert or evaluator at this point but has not integrated their expertise throughout the program's activities.	The program works with assessment experts and evaluators around data collection and reporting needs, but the program does not have access to these experts whenever needed and does not include their expertise in other activities (implementation planning, valuation, etc.)	The program works with assessment experts and evaluators around data collection and reporting needs and integrates their expertise in: <ul style="list-style-type: none"> • Planning activities related to creating assessments, • Building data systems, • Improving data validity or timeliness, • And improving evaluation. However, these experts are not integrated in other activities (implementation planning, evaluation, etc.).	In order to respond to emerging injury threats and related factors, the program has created a programmatic culture around assessment and evaluation which relies on close partnerships with evaluators and integration of evaluation practices. This integration includes assessment and evaluation expertise in: <ul style="list-style-type: none"> • Planning activities, • Identifying populations who experience disproportionate burden and high disparities, • Obtaining valid data (qualitative and quantitative), • Improving data systems, • Analyzing evaluation data, • Creating data products, • Implementation planning, • And improving implementation through 	<ul style="list-style-type: none"> • In order to respond to emerging injury threats and related factors (and to sustain these activities), the program has created a programmatic culture around assessment and evaluation which relies on close partnerships with evaluators and integration of evaluation practices. This integration includes assessment and evaluation expertise in: <ul style="list-style-type: none"> • Planning activities, • Identifying populations who experience disproportionate burden and high disparities, • Obtaining valid data (qualitative and quantitative), • Improving data systems, • Analyzing evaluation data, • Creating data products,

				continuous quality improvement.	<ul style="list-style-type: none">• Implementation planning,• And improving implementation through continuous quality improvement. <p>The program has established hiring practices, contractual language, and regular meeting practices related to assessment and evaluation work to ensure continued access to evaluation expertise now and in the future.</p>
--	--	--	--	---------------------------------	--

2. Engaging partners in evaluation planning

	1	2	3	4	5
2. Engaging partners in evaluation planning	The program has not initiated conversations with partners focused on evaluation at the start of project work. Instead, if partners are consulted on evaluation, it is toward the middle or end of projects.	<p>The program initiates conversations with partners focused on evaluation at the beginning of project planning to ensure evaluation is embedded.</p> <p>Partners are consulted on various aspects of evaluation.</p>	<p>The program integrates partners into planning evaluations of both programs and processes in order to refine ongoing work.</p> <p>The program works with partners so their perspectives help with two to three of the following:</p> <ul style="list-style-type: none"> • Identify key evaluation questions, • Identify data collection methods and existing data sources to answer evaluation questions, • Create data systems to manage evaluation data, • Shared learning spaces to review evaluation findings, • Shared brainstorming to apply emerging findings to ongoing work in a continuous quality improvement framework, • Identify barriers and facilitators of past interventions, • Evaluate the need to change interventions or focus on other outcomes/factors, • And create products to disseminate evaluation 	<p>In order to leverage partnerships to increase effectiveness in responding to emerging injury threats and related factors, the program integrates partners into planning evaluations of both programs and processes in order to refine ongoing work.</p> <p>The program works with partners so their perspectives help with at least four of the following:</p> <ul style="list-style-type: none"> • Identify key evaluation questions, • Identify data collection methods and existing data sources to answer evaluation questions, • Create data systems to manage evaluation data, • Shared learning spaces to review evaluation findings, • Shared brainstorming to apply emerging findings to ongoing work in a continuous quality improvement framework, • Identify barriers and facilitators of past interventions, • Evaluate the need to change 	<p>In order to leverage partnerships to increase effectiveness in responding to emerging injury threats and related factors (and to sustain these activities), the program integrates partners into planning evaluations of both programs and processes in order to refine ongoing work.</p> <p>The program works with partners so their perspectives help:</p> <ul style="list-style-type: none"> • Identify key evaluation questions, • Identify data collection methods and existing data sources to answer evaluation questions, • Create data systems to manage evaluation data, • Shared learning spaces to review evaluation findings, • Shared brainstorming to apply emerging findings to ongoing work in a continuous quality improvement framework, • Identify barriers and facilitators of past interventions, • Evaluate the need to change

11. Traumatic Brain Injury (TBI) specific assessment and evaluation capacity

	1	2	3	4	5
11. Traumatic Brain Injury (TBI) specific assessment and evaluation capacity	The program, while building up general assessment and evaluation infrastructures and processes, has not yet built TBI-specific capacity.	To improve TBI assessment and evaluation, the program: <ul style="list-style-type: none"> • Convenes with TBI experts; • Identifies and accesses reliable TBI data sources and creates TBI-related data collection methods; • Identifies TBI-related needs, challenges, and strengths in communities; • And creates and disseminates TBI-specific data products. 	To improve TBI surveillance, the program: <ul style="list-style-type: none"> • Convenes with TBI experts; • Identifies TBI-related gaps in communities through assessment; • Identifies and accesses reliable TBI data sources and creates TBI-related data collection methods; • Identifies TBI-related needs, challenges, and strengths in communities; • Understands community needs related to TBI and TBI-specific risk, protective, and shared risk and protective factors; • Identifies characteristics of populations who experience disproportionate TBI outcomes; • Creates and disseminates TBI-specific data products. • And adopts a Health Equity lens to understand TBI in communities. 	In order to reliably identify and respond to emerging TBI threats and related factors , the program: <ul style="list-style-type: none"> • Convenes with TBI experts; • Identifies TBI-related gaps in communities through assessment; • Identifies and accesses reliable TBI data sources and creates TBI-related data collection methods; • Identifies TBI-related needs, challenges, and strengths in communities; • Understands community needs related to TBI and TBI-specific risk, protective, and shared risk and protective factors; • Identifies characteristics of populations who experience disproportionate TBI outcomes; • Guides TBI-related interventions through data; • Uses continuous quality improvement related to TBI interventions; • Creates and disseminates TBI-specific data products; • And adopts a Health Equity lens to understand TBI in 	In order to reliably identify and respond to emerging TBI threats and related factors (and to sustain these activities) , the program: <ul style="list-style-type: none"> • Convenes with TBI experts; • Identifies TBI-related gaps in communities through assessment; • Identifies and accesses reliable TBI data sources and creates TBI-related data collection methods; • Identifies TBI-related needs, challenges, and strengths in communities; • Understands community needs related to TBI and TBI-specific risk, protective, and shared risk and protective factors; • Identifies characteristics of populations who experience disproportionate TBI outcomes; • Guides TBI-related interventions through data; • Uses continuous quality improvement related to TBI interventions; • Creates and disseminates TBI-specific data products; • And adopts a Health Equity

	communities.	lens to understand TBI in communities. The program continues building TBI expertise to refine these techniques and processes.
