### Investigation Results

\* Hypotensive transfusion reaction

#### \*Case Definition

Check all that occurred during or within 1 hour of cessation of transfusion:

- All other adverse reactions presenting with hypotension are excluded.
- Hypotension

Check all that apply:

- Hypotension occurs, does not meet the criteria above. Other, more specific reaction definitions do not apply.

**\*Severity**

Did the patient receive or experience any of the following?

- |   |   |
|---|---|
| <input type="checkbox"/> No treatment required                                | <input type="checkbox"/> Symptomatic treatment only                           |
| <input type="checkbox"/> Hospitalization, including prolonged hospitalization | <input type="checkbox"/> Life-threatening reaction                            |
| <input type="checkbox"/> Disability and/or incapacitation                     | <input type="checkbox"/> Congenital anomaly or birth defect(s) of the fetus   |
| <input type="checkbox"/> Other medically important conditions                 | <input type="checkbox"/> Death <input type="checkbox"/> Unknown or not stated |

**\*Imputability**

Which best describes the relationship between the transfusion and the reaction?

- The patient has no other conditions that could explain hypotension.
- There are other potential causes present that could explain hypotension, but transfusion is the most likely cause.
- Other conditions that could readily explain hypotension are present.
- Evidence is clearly in favor of a cause other than the transfusion, but transfusion cannot be excluded.
- There is conclusive evidence beyond reasonable doubt of a cause other than the transfusion.
- The relationship between the adverse reaction and the transfusion is unknown or not stated.

How did the patient respond the cessation of transfusion and supportive treatment?

- Responds rapidly (i.e., within 10 minutes) to cessation of transfusion and supportive treatment.
- The patient does not respond rapidly to cessation of transfusion and supportive treatment.

Did the transfusion occur at your facility?  YES  NO

When did the reaction occur in relation to the transfusion?

- Occurs less than 15 minutes after the start of the transfusion.
- Onset is between 15 minutes after start and 1 hour after cessation of transfusion.

**Module-generated Designations**

*NOTE: Designations for case definition, severity, and imputability will be automatically assigned in the NHSN application based on responses in the corresponding investigation results section above.*
