HUD/REAC Remote Video Inspection (RVI) PHA and POA Logistical Information Checklist

Due to the COVID-19 outbreak, The U.S. Department of Housing and Urban Development would like to hear from you about the readiness of your property to participate in its Remote Video Inspection (RVI) by responding to this quick logistical checklist.

An RVI is a flexible way to conduct physical property inspections and is a form of visual inspection which uses a computer or smart device to allow an inspector or team of inspectors to assess the health and safety of your residence from a distance. RVIs are often used because the items at a property are inaccessible or are in dangerous environments, or circumstances prevent an on-site inspection. HUD may routinely conduct RVIs in the future.

If applicable to your property and your residents, you may be asked to participate in a physical property inspection. This involves checking that your property is equipped and able to meet the requirements of participating in an RVI. This also involves a Proxy (i.e., your on-site operator of the RVI technology assisting the HUD/REAC Inspector of Record) having the ability to: smell mold or a gas leak; open a window and climb stairs; reach above your head for some time and, operate a smart device with a front and rear camera. HUD reserves the right to select the Proxy on the day of the inspection of record.

Your responses as to whether your property meets the logistical requirements will help HUD identify properties and their residents, who may meet the criteria for assisting with an RVI to assess the quality of public housing. Responding to this logistical checklist is voluntary. Your responses are confidential and will not be linked directly to you in reports or documents. Responding to this logistical checklist presents no direct risk or benefit to you other than the opportunity to participate in efforts to improve the quality of HUD public housing programs overall.
