TITLE OF INFORMATION COLLECTION: 2021 Annual NIH/FDA IIG Virtual Training Workshop (NCI)

PURPOSE:

The overall goal of the IIG Workshop is to accelerate research by sharing data and research resources as well as to prepare NIH and FDA trainees to become independent researchers capable of designing a research plan, executing experiments, mentoring trainees, and communicating important advances in medical science. The agenda for the meeting is rigorous. It includes scientific sessions on various topics within immunology such as cell activation and signaling, genomics, immunopathologies, infectious diseases, emerging threats and vaccines, inflammation and innate immunity, mucosal immunity and the microbiome, tumor immunology and translational immunology and emerging technologies. Training sessions often include career development topics such as grant writing and guidance for publication submissions. All trainees are required to present their work either orally (merit based) or during one of two poster sessions and every senior scientist is required to present data as a speaker, session chair, poster judge, or discussion leader. The IIG Workshop provides a critical training opportunity for fellows, postdocs and grad students by providing them the opportunity to present their research to a diverse audience of fellow NIH/FDA immunologists. These gatherings directly advance the missions of the NIH and the FDA, to promote human health.
