NIMH and the Ragon Institute of MGH, MIT and Harvard are conducting a virtual meeting from Oct. 13-14 on the Macrophage Infection by HIV: Implications for Pathogenesis and Cure. This meeting will examine emerging data related to macrophage interactions with the immune system during HIV infection, macrophage reservoirs and approaches to their elimination, and the involvement of CNS myeloid reservoirs and associated co-morbidities. Recent work on macrophage inflammation in the context of SARS-CoV-2 infection, and work from new NIMH-funded investigators will also be highlighted. Learn more about this meeting and register at ([Link to website](#)).

NEWS AND EVENTS

Macrophage Infection by HIV: Implications for Pathogenesis and Cure

Date/Time: October 13-14, 2021

Location: Virtual

The National Institute of Mental Health's Division of AIDS Research and the Ragon Institute of MGH, MIT and Harvard are organizing a virtual two-day meeting on "Macrophage Infection by HIV: Implications for Pathogenesis and Cure."

This meeting will examine emerging data related to macrophage interactions with the immune system during HIV infection, macrophage reservoirs and approaches

to their elimination, and the involvement of CNS myeloid reservoirs and associated co-morbidities. A panel will be convened to discuss research gaps and priorities related to human macrophage reservoirs and inflammation/co-morbidities, and treatment strategies for HIV remission and cure.
