

including social media identifiers, from most U.S. visa applicants worldwide. In keeping with this change, CBP is amending the ESTA application to change social media collection from optional to mandatory. National security is CBP's top priority when adjudicating ESTA applications, and every prospective traveler to the United States undergoes extensive security screening. CBP is continually working to find mechanisms to improve our screening processes to protect U.S. citizens, while supporting legitimate travel to the United States. CBP already requests certain contact information, travel history and family member information from all ESTA applicants. Making social media a mandatory field in the ESTA application will enhance our vetting processes and assist in confirming applicants' identities. While the completion of the field is mandatory, applicants can still select "none".

2. *Biometric Information Collection:* CBP will begin collecting biometric data for identity confirmation on ESTA applications. ESTA applicants will be prompted to take a selfie or "live" photo to conduct a "liveness" test to determine if the ESTA application is interfacing with a physically present human being and not an inanimate object, or if it is a photo of someone other than the lawful passport holder. Respondents will be able to scan their passport biographic page, in order to submit biographic information, including passport photograph.

3. *ESTA Mobile Application (App):* CBP will implement the ESTA Mobile Application to provide an additional and more convenient option for intending VWP travelers to obtain an ESTA. The Mobile App will collect biometric data for confirmation of identity. This is another enhancement that will assist in preventing persons intending to travel to the United States under the VWP by fraud.

This new function will be accessible via mobile devices, *i.e.*, mobile phones, tablets. The portability of mobile devices will facilitate applying for an ESTA application, because an ESTA applicant will not be limited to applying on a desktop computer. The first phase will enable Android devices to use the ESTA App, and the second phase will follow with iOS. No implementation date has been set for iOS implementation.

The Mobile App will be very similar to the already established ESTA application website at <https://esta.cbp.dhs.gov>, but with Near Field Communication (NFC).

*The NFC:*

- Allows users to scan the passport e-Chip (embedded in the passport) to extract passenger data.

- A Mobile Device with NFC capability is required to scan the Passport e-Chip when applying for a new application using the ESTA Mobile App.

- Data on the e-Chip enables the NFC Scan.

- If the mobile device does not have NFC capability, the user can submit an ESTA application via the established website.

After determining if the mobile device has NFC capability:

- The applicant takes a selfie or "live" photo (another person may also take a photo of the applicant).

- The Mobile App will do a "liveness" test to determine that it is interfacing with a physically present human being and not an inanimate object, or if it is a photo of someone other than the lawful passport holder.

- If the passport photo does not match the "liveness" photo, a "Third Party Acknowledgement" screen will display, which requires confirmation.

- The applicant proceeds by completing the data fields the same as with the established ESTA application.

- When the applicant completes the application, he/she can review his/her responses.

The payment process will be the same as the established ESTA application, and the cost of each ESTA application will continue to be 14 USD, except in the case of a denial, the fee is 4 USD.
