Notes:

- Larger sample size coincides with the economic census every five years
- Serves as a benchmark
- Allows more detail to be provided for the demographics data (including additional NAICS, geography levels, and detailed race)
- More data are available as provided by the econ census
- Smaller sample size is needed to reduce respondent burden and operations burden
- Allows for higher level NAICS and geography detail
- No new data available from the economic census
- Data are from Business Register and County Business Patterns (however, receipts are not available in non-census year)
- Nonprofits may receive other modules as determined during content planning
