

Mississippi State University – Cropping Practices Surveys  
Done under a cooperative agreement

NASS is currently approved to conduct the Cropping Practices Surveys for Corn, Cotton, Rice, Soybeans, and/or Wheat when funded.

The Mississippi State University Extension Service (MSUES) has entered into a cooperative agreement with NASS to conduct the Soybean Cropping Practices Survey for crop year 2020. Seed types were updated to account for seed types currently used. Another category was added to account for seed types not included in the list. Some questions in the operator characteristic section were removed from all versions. Some questions in the sample field section were removed from the soybean version. The Mississippi State University Extension Service no longer needs those data.

While the other versions (corn, cotton, rice and wheat) will not be conducted in 2020, the revised questionnaires have been loaded into the OMB submission system. The changes to these additional questionnaires mirror the changes to soybeans mentioned above.
