Title: Restaurant Employee Health Policy Study
Project Id: 0900f3eb81a574d9
Accession #: NCEH-FT-11/1/19-574d9
Project Contact: Kramer_Adam (ank5)
Organization: NCEH/ATSDR/DEHSP/WFEHSB/FT
Status: **Pending Clearance : PRA Revision**
Intended Use: **Project Determination**
Estimated Start Date: 12/02/2019
Estimated Completion Date: 09/29/2020
CDC/ATSDR HRPO/IRB Protocol #:
OMB Control #: 0920-1227

Determinations

Determination	Justification	Completed	Entered By & Role
HSC: Does NOT Require HRPO Review	Research Not Involving Human Subjects <i>45 CFR 46.102(e)</i>	12/11/20	Davis_Stephanie I. (sgd8) CIO HSC
PRA: PRA Applies		12/11/20	Davis_Stephanie I. (sgd8) CIO OMB / PRA
HRPO: HRPO/IRB Approves	HRPO/IRB decision date: 10/7/20 IRB Expiration date: 12/31/30	10/17/20	Vann_Jerrell A. (jiv4) HRPO Reviewer
ICRO: Returned with No Decision		9/30/20	Zirger_Jeffrey (wtj5) ICRO Reviewer

Description & Funding

Description

Priority: Standard
Date Needed: 12/02/2019
Determination Start Date: 11/18/20

Description:

This study will be conducted by the Environmental Health Specialists Network (EHS-Net) program, a collaborative project of the Centers for Disease Control and Prevention (CDC), the U.S. Food and Drug Administration (FDA), the U.S. Department of Agriculture (USDA), and eight local and state public health departments (Franklin County [Ohio], New York, New York City [New York], Minnesota, Rhode Island, Tennessee, Southern Nevada Health District [Nevada], and Harris County [Texas]). This is an EHS-Net intervention study designed to assess whether an educational intervention will result in restaurants either developing or modifying their sick worker management plans. The study will occur in randomly selected restaurants in the EHS-Net sites. The study will use a quasi-experimental pre- and post-test design. The study will include two randomly assigned groups (intervention and control). Each of the eight EHS-Net sites will collect data in twenty restaurants in each group for a total of 320 restaurants. In both the intervention and the control groups, data collectors will conduct an initial site visit in which they will interview the manager and observe food safety practices within the restaurant. Then, on this same visit, the restaurants in the intervention group will receive an educational intervention comprised of an explanation of the need to develop sick worker management plans and a toolkit (with sample policies). The restaurants in the control group will not receive this intervention at this time. Three to six months later, the intervention and control restaurants will be visited again, and a similar data collection will occur. At this second visit, the intervention will be provided to control restaurants. If the intervention is successful, based on either the development or modification of restaurant sick worker policies, a telephonic follow up interview will occur with previous control restaurants to see if their policies have changed.

IMS/CIO/Epi-Aid/Chemical Exposure Submission: No
IMS Activation Name: Not selected
Primary Priority of the Project: Not selected
Secondary Priority(s) of the Project: Not selected
Task Force Associated with the Response: Not selected

CIO Emergency Response Name:	Not selected
Epi-Aid Name:	Not selected
Assessment of Chemical Exposure Name:	Not selected
Goals/Purpose	Examine whether an educational intervention will result in restaurants either creating or modifying their sick worker management plans. Sick food workers are the leading source of norovirus outbreaks attributed to restaurants. These plans can help restaurants prevent sick workers from working and consequently reduce outbreaks.
Objective:	The objective of the study is to determine if an educational intervention leads restaurants to create or improve their sick worker management plans.
Activities or Tasks:	New Collection of Information, Data, or Biospecimens
Target Populations to be Included/Represented:	Other
Tags/Keywords:	Food Services, Sick food worker
CDC's Role:	CDC employees will participate as co-authors in presentation(s) or publication(s), CDC employees will provide substantial technical assistance or oversight, CDC is providing funding
Method Categories:	Individual Interviews (Qualitative); Observation
Methods:	Data collectors (EHS-Net site staff which are experienced food safety professionals) will interview restaurant managers about: restaurant policies around sick food workers and preventing illness transmission; their demographics; and their beliefs about sick food workers. Data collectors will also collect observation data in the restaurant kitchen on implementation of practices designed to prevent illness transmission from a sick food worker.
Collection of Info, Data or Biospecimen:	Information will be obtained through interview and observation.
Expected Use of Findings/Results:	The findings will be used to inform public health practice in developing interventions to keep sick food workers from working.
Could Individuals potentially be identified based on Information Collected?	No

HSC Review

Suggested level of IRB review

Expedited review is suggested	Yes
1a - Study of drugs not requiring Investigational New Drug exemption from FDA	No Selection
1b - Study of medical devices not requiring Investigational Device Exemption from FDA	No Selection
2a - Collection of blood from healthy, non-pregnant adults; below volume and frequency limits, minimally invasive	No Selection
2b - Collection of blood from other adults and children; below volume and frequency limits, minimally invasive	No Selection
3 - Prospective noninvasive collection of biological specimens for research purposes	No Selection
4 - Collection of data through routine, noninvasive procedures, involving no general anesthesia, sedation, x-rays, or microwaves	No Selection
5 - Research that uses previously collected materials	No Selection
6 - Collection of data from voice, video, digital, or image recordings made for research purposes	No Selection
7 - Research that uses interview, program evaluation, human factors, or quality assurance methods	Yes

HSC Attributes

Non-Human/Non-Animal Material	Yes
--------------------------------------	-----

Other - This is a research study about restaurant food safety policies and practices and not human subjects. Yes

Additional Ethical Considerations

This is a re-determination of research study previously reviewed and approved as CDC Protocol 7261 (Restaurant Employee Health Policy Study). The PI is Dr. Adam Kramer (ank5). After careful deliberation of the research aims, it has been determined that this protocol is "research not involving identifiable human subjects" and will not require IRB review. This is a research study about restaurant food safety policies and practices and not about human subjects.

Regulation and Policy

Do you anticipate this project will be submitted to the IRB office No

Estimated number of study participants

Population - Children N/A

Population - Minors N/A

Population - Prisoners N/A

Population - Pregnant Women N/A

Population - Emancipated Minors N/A

Suggested level of risk to subjects Do you anticipate this project will be exempt research or non-exempt research

Requested consent process wavers

Informed consent for adults No Selection

Children capable of providing assent No Selection

Parental permission No Selection

Alteration of authorization under HIPPA Privacy Rule No Selection

Requested Waivers of Documentation of Informed Consent

Informed consent for adults No Selection

Children capable of providing assent No Selection

Parental permission No Selection

Consent process shown in an understandable language

Reading level has been estimated No Selection

Comprehension tool is provided No Selection

Short form is provided No Selection

Translation planned or performed No Selection

Certified translation / translator No Selection

Translation and back-translation to/from target language(s) No Selection

Other method No Selection

Clinical Trial

Involves human participants No Selection

Assigned to an intervention No Selection

Evaluate the effect of the intervention No Selection

Evaluation of a health related biomedical or behavioral outcome No Selection

Registerable clinical trial No Selection

Other Considerations

No Selection

Exception is requested to PHS informing those bested about HIV serostatus

Human genetic testing is planned now or in the future No Selection

Involves long-term storage of identifiable biological specimens No Selection

Involves a drug, biologic, or device No Selection

Conducted under an Investigational New Drug exemption or Investigational Device Exemption No Selection

Data

DMP

Proposed Data Collection Start Date: 12/2/19

Proposed Data Collection End Date: 9/29/20

Proposed Public Access Level: Public

Public Access Justification:

The dataset may have identifying information if combined with other data that could lead to the identification of the restaurant and potentially to the person responding to the survey. Specific fields would not be allowed to be released to protect the privacy of the respondents.

How Access Will Be Provided for Data:

Data will be released in aggregate format. Any non-aggregated data will have EHS-Net site identifiers and any other potential identifiers omitted from release.

Plans for Archival and Long Term Preservation:

Spatiality

Spatiality (Geographic Locations) yet to be added
