Subject: APPLY NOW! Middle School Climate Change in Your Community Environmental Health Challenge
Date: Tuesday, February 15, 2022 9:33:31 AM
Attachments: [2022 WHA Citizen Science Flyer v07.pdf](#)
Importance: High

Dear Middle School Principal –

Please forward this email to your science department teachers!

Are you a science teacher looking to help your students learn about the environment and how to create change in their community? The **Women’s Health Awareness Climate Change in Your Community Environmental Health Challenge** may be just the opportunity! Individuals may receive support to implement a climate change citizen science project within their local community.

This challenge is intended for sixth and seventh grade middle school students in North Carolina to address climate change in their community, its health impacts, development of community-driven solutions, and collaboration through scientific inquiry.

Science teachers who serve sixth and seventh grade students and work at schools in disadvantaged and/or underserved communities in North Carolina are invited to [apply](#) today! **Applications are due by 11:59 p.m. E.T. on Monday, February 28, 2022.**

The top five project proposals will be presented and judged at the virtual National Institute of Environmental Health Sciences (NIEHS) Women’s Health Awareness Conference on Saturday, April 9, 2022.

For more information about this opportunity, please join the virtual information session!

Virtual Information Session

Thursday, February 24, 2022

3:30 – 4:30 p.m. E.T.
