

CET – Annotated Questionnaire (Wave 67)

Note: The questions below are the proposed questions for the 67th wave of the Weekly Current Events Tracker (CET). Questions highlighted in yellow will be asked every week; questions highlighted in blue will be rotated into the survey on a monthly basis; and questions highlighted in green are meant to be asked in this wave only or are being asked again to update data on a variable of interest. We will be fielding questions about vaccines for children under 5, vaccine motivations, testing beliefs, and vaccine-induced immunity beliefs.

For the next section we would like to talk about current events.

test_know: COVID tests fall into two categories: *Rapid tests* (such as antigen tests) give results in a few minutes, and can be at-home tests or tests given at a pharmacy or other location. *Laboratory tests* (such as PCR tests) can also be taken at home or given at a pharmacy or other location, but must be sent to a laboratory to determine the results and it often takes a few days to receive results.

Thinking about these two categories of tests, how much do you agree or disagree with the following statements?

//PROGRAMMING NOTE: randomize variables in grid//
