Acute Flaccid Myelitis: Patient Summary Form

FOR LOCAL USE ONLY

Name of person completing	me of person completing form: State a											
AffiliationPhone:						Email:						
Name of physician who can p	provide additiona	nl clinical/lab inf	ormation, if need	ded								
Affiliation												
Name of main hospital that provided patient's care:												
			ccid Mye								m Approved	
											0. 0920-0009 : 08/31/2022	
Please send the following information along with the patient summary form: ☐ MRI report ☐ MRI images												
1 . Today's date/	_/	(mm/dd/yyyy	r) 2 . 9	State as	signed	patient	t ID:			 =		
3. Sex: M F 4. Date of birth/ Residence: 5. State 6. County									_			
7. Race: □American Indian or Alaska Native □Asian □Black or African American □Native Hawaiian or Other Pacific Islander □White (check all that apply) □Not Hispanic or Latino												
9. Date of onset of limb w	veakness	//	(mm/da	d/yyyy)								
10. Was patient admitted	to a hospital?	□yes □no	□unknown	11.	Date of	admis	sion to fi	rst hospital/_	/			
12.Date of discharge from	n last hospital_	//	(or 🗆	still ho	spitaliz	ed at t	ime of fo	rm submission)				
13. Did the patient die fro		□yes □n	o 🗆 unknown	14	. If yes,	date o	of death_	//				
SIGNS/SYMPTOMS/COI	NDITION:					Diabt	A rm	Loft Arm	Diaht La	~	oft Loc	
					Right Arm			Left Arm	Right Leg		eft Leg	
15. Weakness? [indicate yes(y), no (n), unknown (u) for each limb]					Y N U ☐ flaccid			Y N U □ flaccid	Y N U □ flaccid	U Y □fl	N U accid	
4						3 spastic		☐ spastic	spastic	l	pastic	
15a. Tone in affected limb(s) [flaccid, spastic, normal for each limb]					□ normal		al	☐ normal	normal 🔲 normal		ormal	
						unkno	wn	unknown	unknowr	n u	nknown	
					Yes	No	Unk					
16. Was patient admitted to ICU?								17. If yes, admit date:///				
In the 4-weeks BEFORE onset of limb weakness , did patient:												
18. Have a respiratory illness?								19 . If yes, onset date//				
20. Have a gastrointestinal illness (e.g., diarrhea or vomiting)?								21. If yes, onset date//				
22. Have a fever, measured by parent or provider ≥38.0°C/100.4°F? 24. Have pain in neck or back?								23. If yes, onset date//				
24. Have pain in ficer of t	Jack.							23. 11 yes, onset	uatc/_	/		
26 . At onset of limb weakness, does patient have any underlying illnesses?								27. If yes, list:				
Magnetic Resonance Ima 28. Was MRI of spinal cor	d performed?		l no □ unkn					ine MRI:/ □ unknown	_/	_		
30. Did the spinal MRI show a lesion in at least some spinal cord gray matter? ☐ yes ☐ no ☐ unknown 31. Was MRI of brain performed? ☐ yes ☐ no ☐ unknown 32. If yes, date of brain MRI://

33a. CSF from LP1												
33b. CSF from LP2												

Public reporting burden of this collection of information is estimated to average 12 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. Send comments regarding this burden estimate or any other aspect of this collection of information including suggestions for reducing this burden to CDC/ATSDR Reports Clearance Officer; 1600 Clifton Road NE, MS D-74 Atlanta, Georgia 30333.

version 7.1 November 25, 2019

At time of 60 day follow-up please collect and send the following information: □ Discharge summary □ History and physical (H&P) □ Neurology consult notes □ EMG report (if done) □ Infectious disease consult notes (if available) □ Vaccine registry record □ Diagnostic laboratory reports							
	Flaccid Myelitis Outcome – follow-up of confirmed and probable AFM cases (completed at 60 days, 6 months 2 months after onset of limb weakness)						
33 . Date	e of follow-up:// (mm/dd/yyyy)						
34. Impa	airment: □ None □ Minor (any minor involvement) □ Significant (≤2 extremities, major involvement) □ Severe (≥3 extremities and respiratory involvement) □ Death □ Unknown						
	34a. Date of death:/ (mm/dd/yyyy)						
35. Phys	sical condition (includes cardiovascular, gastrointestinal, urologic, endocrine as well as neurologic disorders):						
i. ii. iii. iv.	Medical problems sufficiently stable that medical or nursing monitoring is not required more often than 3-month intervals Medical or nurse monitoring is needed more often than 3-month intervals but not each week. Medical problems are sufficiently unstable as to require medical and/or nursing attention at least weekly. Medical problems require intensive medical and/or nursing attention at least daily (excluding personal care assistance)						
	er limb functions: Self-care activities (drink/feed, dress upper/lower, brace/prosthesis, groom, wash, perineal care) dependent mainly upon mb function:						
i. ii. iii. iv.	Age-appropriate independence in self-care without impairment of upper limbs Age-appropriate independence in self-care with some impairment of upper limbs Dependent upon assistance in self-care with or without impairment of upper limbs. Dependent totally in self-care with marked impairment of upper limbs.						
37. Low	er limb functions: Mobility (walk, stairs, wheelchair, transfer chair/toilet/tub or shower) dependent mainly upon lower limb function:						
i. ii. iii. iv.	Independent in mobility without impairment of lower limbs Independent of mobility with some impairment of lower limbs, such as needing ambulatory aids, a brace or prosthesis Dependent upon assistance or supervision in mobility with or without impairment of lower limbs. Dependant totally in mobility with marked impairment of lower limbs.						
38. Sens	sory components: Relating to communication (speech and hearing) and vision:						
i. ii. iii. iv.	Age-appropriate independence in communication and vision without impairment Age-appropriate independence in communication and vision with some impairment such as mild dysarthria, mild aphasia or need for eyeglasses or hearing aid. Dependent upon assistance, an interpreter, or supervision in communication or vision Dependent totally in communication or vision						
39. Excr	retory functions (bladder and bowel control, age-appropriate):						
i. ii. iii. iv.	Complete voluntary control of bladder and bowel sphincters Control of sphincters allows normal social activities despite urgency or need for catheter, appliance, suppositories, etc. Dependent upon assistance in sphincter management Frequent wetting or soiling from bowel or bladder incontinence						
40. Տսբլ	port factors:						
i. ii. iii. iv.	Able to fulfil usual age-appropriate roles and perform customary tasks Must make some modifications in usual age-appropriate roles and performance of customary tasks Dependent upon assistance, supervision, and encouragement from an adult due to any of the above considerations Dependent upon long-term institutional care (chronic hospitalization, residential rehabilitation, etc. Excluding time-limited hospitalization for specific evaluation or treatment)						

Public reporting burden of this collection of information is estimated to average 20 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. Send comments regarding this burden estimate or any other aspect of this collection of information including suggestions for reducing this burden to CDC/ATSDR Reports Clearance Officer; 1600 Clifton Road NE, MS D-74 Atlanta, Georgia 30333.

Acute Flaccid Myelitis case definition (https://cdn.ymaws.com/www.cste.org/resource/resmgr/2019ps/final/19-ID-05 AFM final 7.31.19.pdf)

Criteria

- An illness with onset of acute flaccid limb weakness AND
- A magnetic resonance image (MRI) showing spinal cord lesion in at least some gray matter and spanning one or more spinal segments, AND
- Excluding persons with gray matter lesions in the spinal cord resulting from physician diagnosed malignancy, vascular disease, or anatomic abnormalities.

Case Classification

Confirmed:

- An illness with onset of acute flaccid limb weakness AND
- MRI showing spinal cord lesion largely restricted to gray matter and spanning one or more spinal segments
 - Excluding persons with gray matter lesions in the spinal cord resulting from physician diagnosed malignancy, vascular disease, or anatomic abnormalities AND
 - Absence of a clear alternative diagnosis attributable to a nationally notifiable condition

Probable:

- An illness with onset of acute flaccid limb weakness AND
- MRI showing spinal cord lesion where gray matter involvement is present but predominance cannot be determined,
 - Excluding persons with gray matter lesions in the spinal cord resulting from physician diagnosed malignancy, vascular disease, or anatomic abnormalities AND
 - Absence of a clear alternative diagnosis attributable to a nationally notifiable condition

Suspect:

- An illness with onset of acute flaccid limb weakness AND
- MRI showing spinal cord lesion in at least some gray matter and spanning one or more spinal segments,
 - Excluding persons with gray matter lesions in the spinal cord resulting from physician diagnosed malignancy, vascular disease, or anatomic abnormalities AND
 - Available information is insufficient to classify case as probable or confirmed.
