

ASPA COVID-19 PUBLIC EDUCATION CAMPAIGN

A campaign to increase vaccine acceptance and reinforce basic prevention measures

CET – Annotated Questionnaire (Wave 63)

Note: The questions below are the proposed questions for the 63rd wave of the Weekly Current Events Tracker (CET). Questions highlighted in yellow will be asked every week; questions highlighted in blue will be rotated into the survey on a monthly basis; and questions highlighted in green are meant to be asked in this wave only or are being asked again to update data on a variable of interest. We will be fielding questions about reasons for waiting to get a booster, parents' vaccine concerns, the CDC COVID-19 Community Levels tracker, COVID treatment for children under 12, and the Novavax vaccine.

For the next section we would like to talk about current events.

cdc_commlevels2: Earlier this year, the Centers for Disease Control and Prevention (CDC) dropped its recommendation for universal mask-wearing in areas of low or medium risk of COVID. They also unveiled a new method for calculating risk in each U.S. county, called COVID-19 Community Levels, which focuses on the impact of severe COVID on local hospitals and helps people decide what precautions to take against COVID—including when to wear a mask. The below map depicts COVID-19 Community Levels across the United States as of mid May.

COVID-19 Community Levels of All Counties in US

COVID-19 Community Levels in US by County

	Total	Percent	% Change
High	79	2.45%	0.71%
Medium	318	9.86%	1.86%
Low	2827	87.69%	-2.57%

novavax_perc: The Novavax COVID vaccine is not an mRNA vaccine—it contains the spike protein that is on the surface of the virus that causes COVID, but formulated in a way which cannot cause disease. When the vaccine is injected, it causes the immune system to produce antibodies and immune responses so that the body will be able to recognize and attack the coronavirus when it enters the body.
