

CET – Annotated Questionnaire (Wave 66)

Note: The questions below are the proposed questions for the 66th wave of the Weekly Current Events Tracker (CET). Questions highlighted in yellow will be asked every week; questions highlighted in blue will be rotated into the survey on a monthly basis; and questions highlighted in green are meant to be asked in this wave only or are being asked again to update data on a variable of interest. We will be fielding questions about perceptions of vaccines for children under 5, Novavax, COVID risk perceptions, vaccine motivations, and misinformation.

For the next section we would like to talk about current events.

Almost all of the statements you saw on the previous pages were false. The only true statements were “In order to be authorized for use, the COVID-19 vaccines must go through extensive testing over three phases of clinical trials with thousands of participants” and “COVID-19 vaccines can cause a short fever, headache, fatigue, sore arm or chills, especially after the second dose. Other reactions are extremely rare.” The other statements were examples of misinformation about COVID, vaccines, and boosters.

Please visit [vaccines.gov](https://www.vaccines.gov) or [cdc.gov/coronavirus](https://www.cdc.gov/coronavirus) to learn more about vaccines and boosters.
