

Dear Investigators,

The Cancer and Comorbidities Working Group at the National Cancer Institute in collaboration with the National Institute on Aging will host a virtual workshop, entitled '*Cancer, Aging, and Comorbidities.*' This workshop will encompass a series of seven webinar-based sessions delivered from January to July 2023.

These 60-minute-long sessions will explore the status, challenges, and opportunities in basic mechanisms, translational research, and clinical research pertinent to the intersection of cancer treatment, aging, and comorbidities. Talks will be delivered by academic researchers who have long-standing research on the selected topics. The goal of this workshop is to stimulate interest in the covered topics and encourage the consideration of aging and comorbidities in cancer research.

This event is free and open to the public.

Please visit the [Agenda](#) page for more information about this workshop. [Registration](#) is now open.

Thank you and best regards,
