
GC-859 Nuclear Fuel Data Survey Web-Application User Manual

Release : PNNL-34034, Revision 1

GC-859 Nuclear Fuel Data Survey

Apr 12, 2023

Contents

1	Schedule A: Site Operator Data	3
1.1	Schedule A Comments	9
2	Schedule B: Reactor Data	11
2.1	Schedule B Comments	20
3	Schedule C: Fuel Data	23
3.1	Schedule C.1.1: Data on Discharged Fuel Assemblies	24
3.2	Schedule C.1.1: Constellation Specific Assembly Data Format	30
3.3	Schedule C.1.1: Southern Nuclear Specific Assembly Data Format	33
3.4	Schedule C.1.2: Fuel Cycle History	35
3.5	Schedule C.1.2: Constellation Specific Cycle History Data Format	39
3.6	Schedule C.1.3: Fuel Assembly Type Codes	40
3.7	Schedule C.1.4: Shipments/Transfers of Discharged Fuel	41
3.8	Schedule C.2: Projected Assembly Discharges	45
3.9	Schedule C.3: Special Fuel Forms	45
3.10	C.3.1 Special Fuel Form - Canisters	46
3.11	C.3.2 Special Fuel Form - Uncanistered Fuel Rods/Pieces	49
3.12	C.3.3 Special Fuel Form - Consolidated/Reconstituted/Reconstructed Assemblies; Dimensionally or Other Than LWR Non-Standard Assemblies and Failed Fuel	51
3.13	Schedule C.4: Potential High-Level Waste	54
3.14	Schedule C Comments	54
4	Schedule D: Storage Facility Data	57
4.1	Schedule D.2 Storage Facility Information Pool Storage	58
4.2	Schedule D.3 Storage Facility Information Dry Storage	59
4.3	Site Specific Canister Data File Format Upload	71
4.4	Schedule D Comments	73
5	Schedule E: Non-Fuel Data	75
5.1	Schedule E Comments	81
6	Schedule F Greater-Than-Class C Waste Data	83
6.1	Schedule F Comments	85
7	Reset to Base Data	87
8	Required Entries	91
9	Fast Track Submission - No New Data to Report	93
10	Notices	97

This user manual documents the step-by-step instructions for using the web-application of the Nuclear Fuel Data Survey Form GC-859 to enter the data requested in Schedules A-F of the survey form. These instructions are written for a survey respondent (also referred to as a “user” of the web application) and it is assumed that respondents have registered for access to the web application and are able to access the data entry screens for their facility or facilities.

After logging into the portal and selecting the appropriate facility, the user will be prompted to enter data sequentially for each section. A user can exit the sequential process by clicking on the green “My GC-859” button at the upper left-hand part of the screen, circled below in red (1) in Fig. 1 and the user can click on any section of any schedule to enter data for that schedule. If the user wishes to return to the sequential data entry they can click on the green “Return to last GC859 data entry point”, circled in the lower left-hand corner in Fig. 1 below (2).

User can revert all changes by clicking “Reset to Base Data” circled below in red (3). This option can be used when entering data for practice or if user wants to correct a mistake. For details on reset steps see section *Reset to Base Data*.

On the input form some of the entries are required and some maybe optional. The required fields are discussed in *Required Entries*.

In cases with no new data to report for example for plants that were shutdown for an extended period of time a fast track submission is available as discussed in section *Fast Track Submission*.

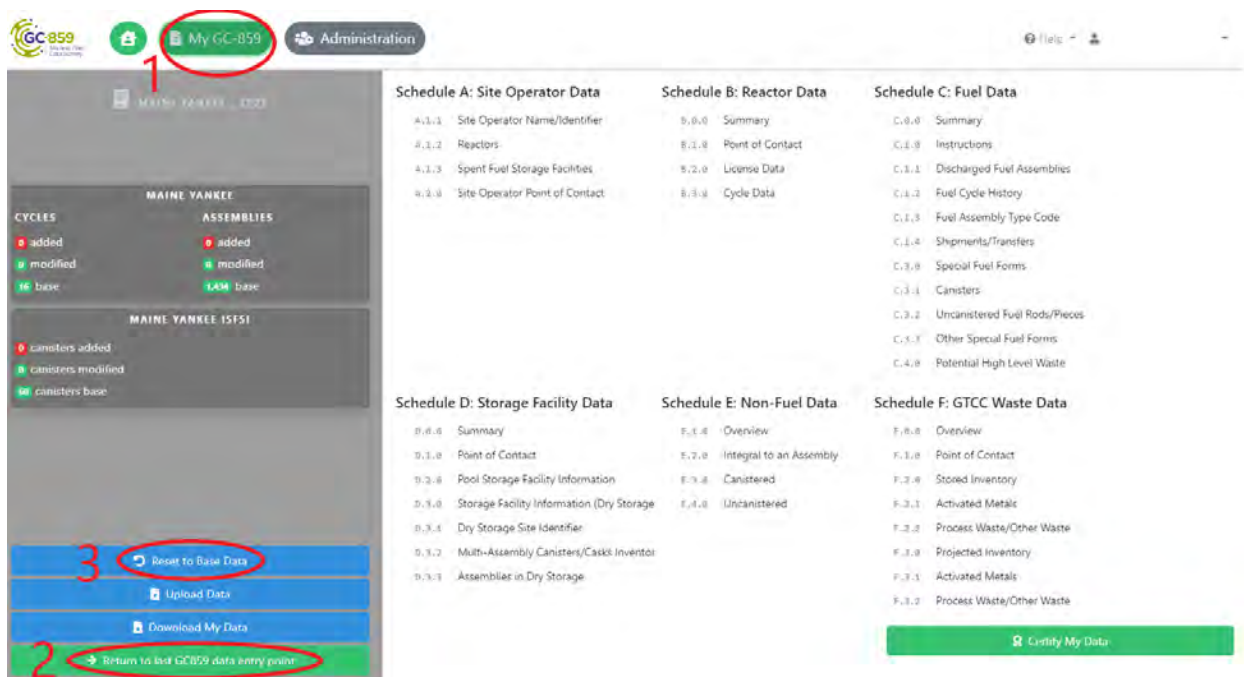

Fig. 1: “My GC-859” Screen

The sequential data entry process will be discussed within the following subsections of this manual:

SCHEDULE A: SITE OPERATOR DATA

After the user clicks on the “get started” button from the welcome page, they will be taken to the Schedule A page to enter information for Schedule A for site operating data as shown in Fig. 1.1.

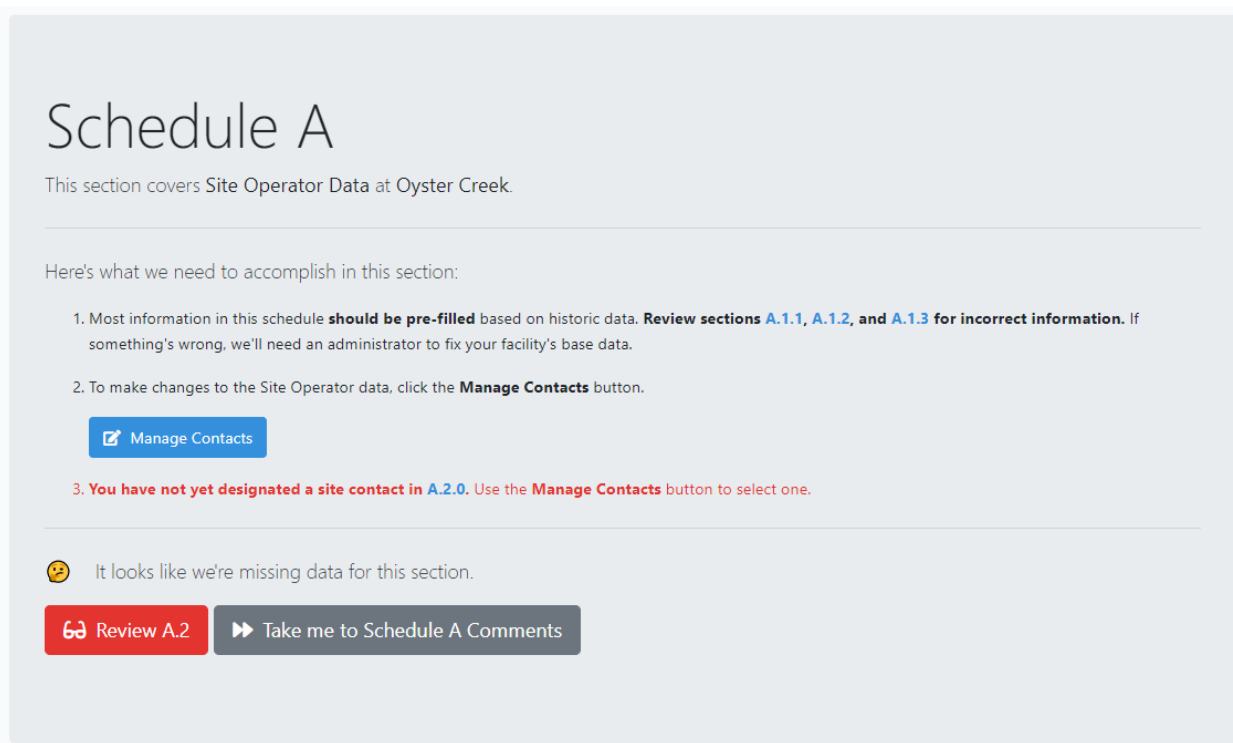

Fig. 1.1: Schedule A Site Operator Data

If the user has access to multiple facilities, they can click on the upper left-hand text circled below in Fig. 1.2 which also shows the drop-down menu. In this example case, it shows that the user has access to “Diablo Canyon” and “Humboldt Bay” facilities.

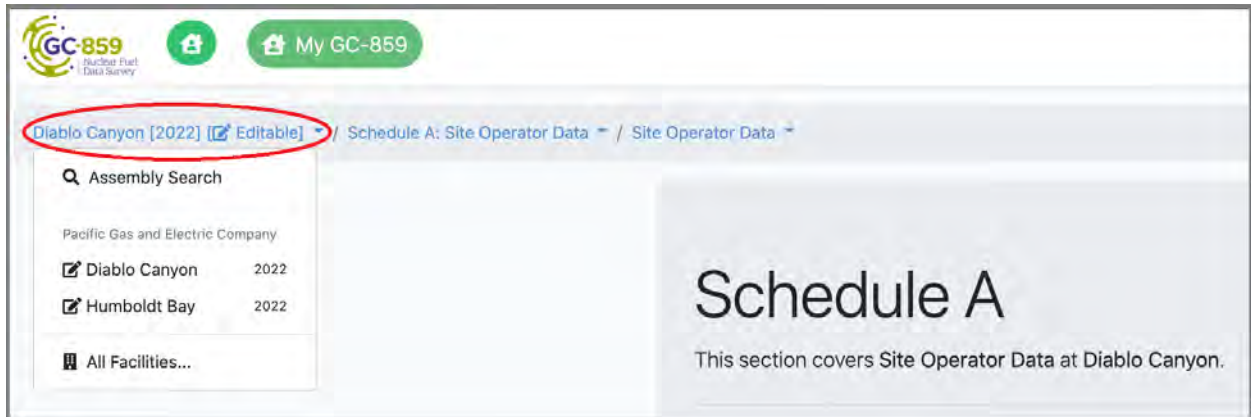

Fig. 1.2: Example Access Menu for Other Facilities

While editing a table within the schedule, the user can click on the “GC-859 Form” link near the top of the page to return to the last page or the beginning of a new schedule as shown in Fig. 1.3.

Fig. 1.3: GC-859 Link to Return to Last Page or Beginning of New Section

To enter contact information, the user needs to click the blue “Manage Contacts” button shown in Fig. 1.1 and Fig. 1.2. Once they click this button the “Contact Management” screen in Fig. 1.4 will show. To create a contact the user clicks on the blue “Create Contact” button in the upper left. This will bring them to a menu where they enter contact information as shown in Fig. 1.5.

Fig. 1.4: Schedule A Contact Management

The screenshot shows a "Create Contact for Braidwood" form. It has a header with the title "Create Contact for Braidwood". The form contains several input fields: "First Name *" (required), "Last Name *" (required), "Contact Title", "Contact Phone", "Contact Email", "Street Address", "City", "State", "Zip Code", and "Comments". There are also two buttons at the bottom: "Cancel" and "Submit". The "Contact Phone" field has a note: "This field is required if you do not specify an email address." The "Contact Email" field has a note: "This field is required if you do not specify a phone number." The "Comments" field has a small icon in the bottom right corner.

Fig. 1.5: Schedule A Create Contact Form

Once contact information is entered, the user can assign a separate contact for each GC-859 schedule by clicking the

gray gear button which will show a drop-down menu with a list of available contacts to assign this schedule to as shown in Fig. 1.6.

Fig. 1.6: Schedule A Assign Contact for Each GC-859 Schedule

Alternatively, the same contact can be assigned to all schedules by clicking on the green “Assign all points of contact to..” button as shown in Fig. 1.7.

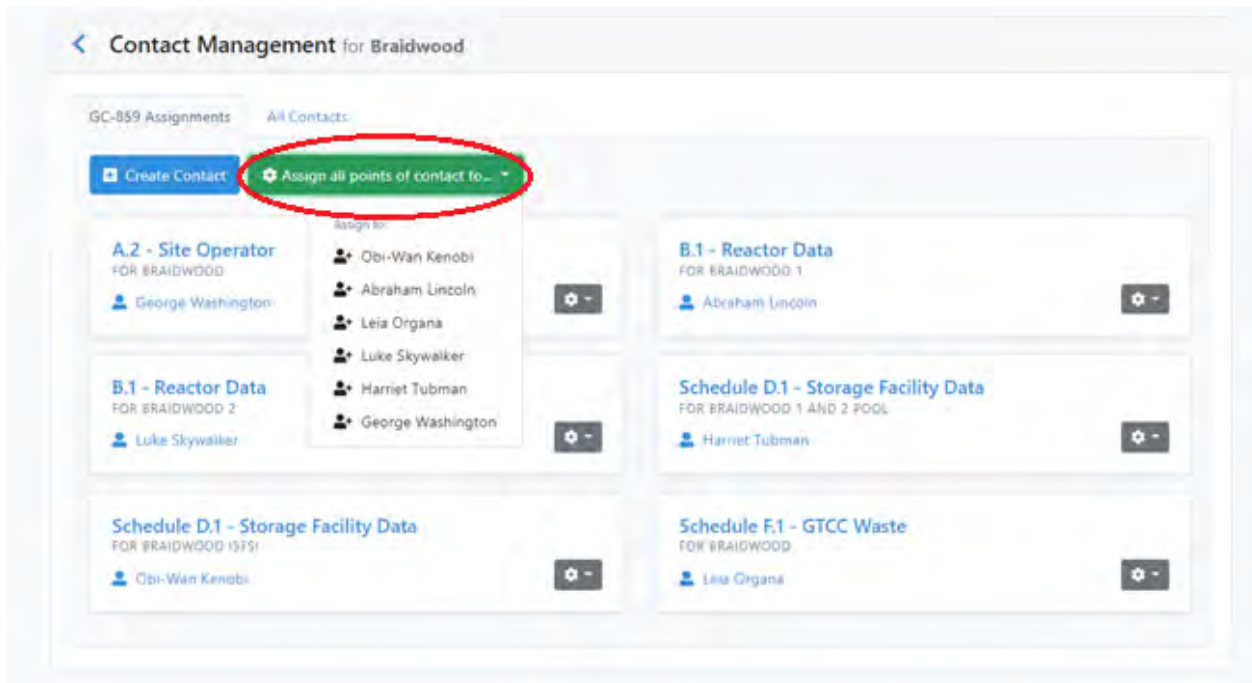

Fig. 1.7: Schedule A Assign All Points of Contact

After all contacts have been assigned. The user can click on the blue back button next to “Contact Management” to exit this section as shown in Fig. 1.8.

Fig. 1.8: Contact Information Completion

1.1 Schedule A Comments

Next, user can proceed to the comment section using the grey button “Take me to Schedule A Comments” shown above in Fig. 1.1. Provide any comments you have concerning Site Operator Data (Section A.1, A.2, A.3) and label your comments by the Schedule and Item Number to which they refer. To enter and edit comments click the “Edit Comments” button in Fig. 1.9. After completing comments proceed to Schedule B.

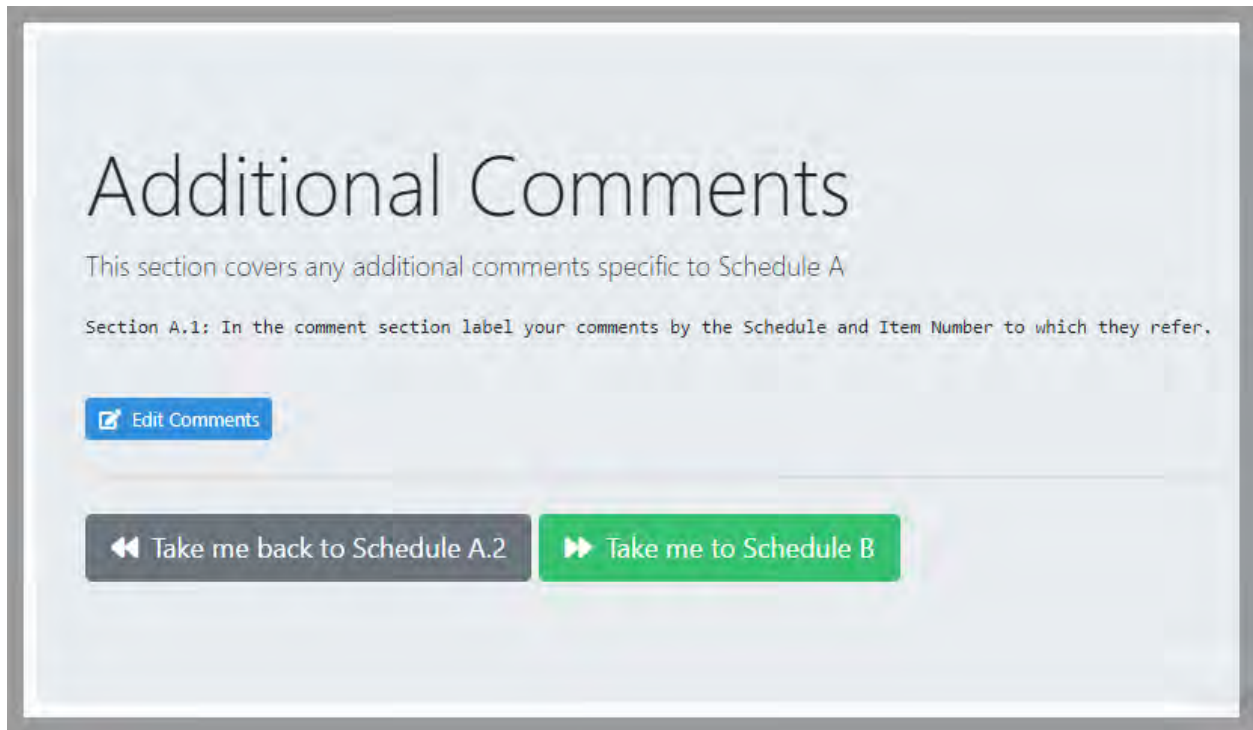

Fig. 1.9: Schedule A Comment Section

SCHEDULE B: REACTOR DATA

After completing comments and exiting the “Contact Management” section, the user can click on the green “Take me to Schedule B” to begin Schedule B. This will bring them to the screen shown in Fig. 2.1. The counters show a high-level summary of what’s included in the base data, and how much information you’ve provided. After reviewing the summary users can proceed to Schedule B.1.

Fig. 2.1: Reactor Data Front Screen

In Schedule B.1 users can review and update the Point of Contact for each reactor on site Fig. 2.2.

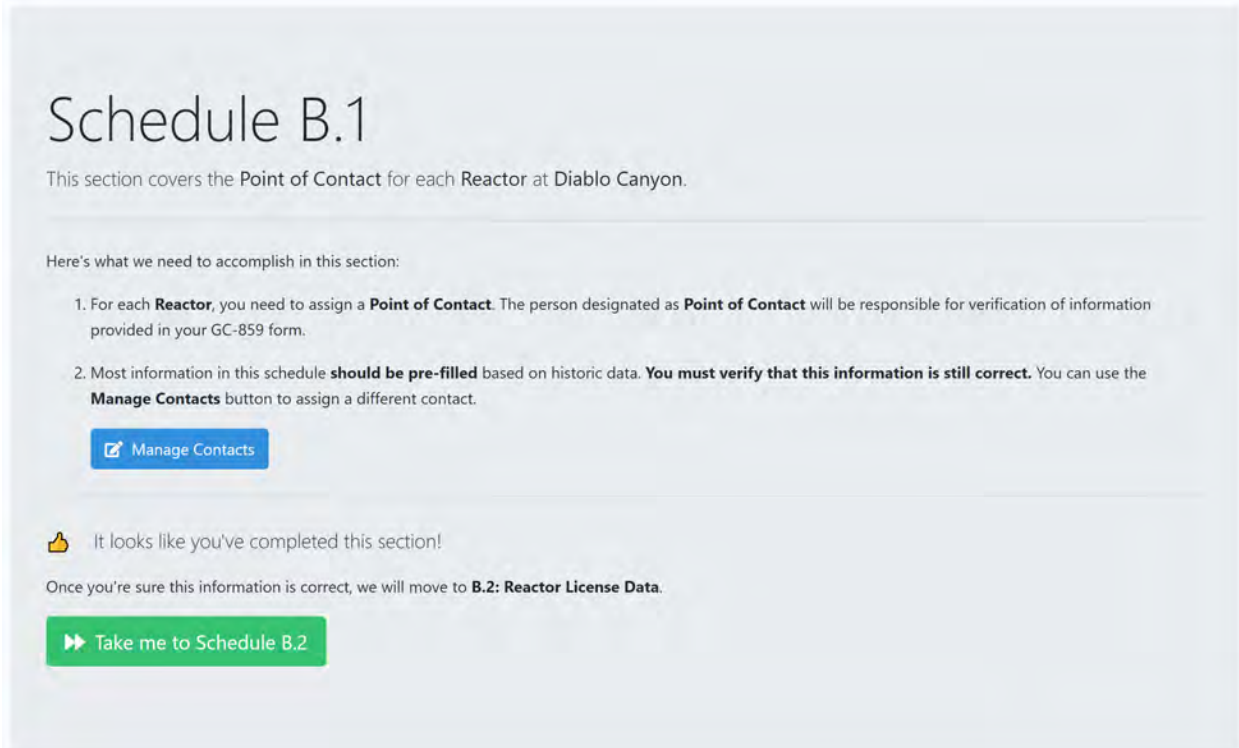

Fig. 2.2: Point of Contact Front Screen

Once the user has completed entering or verifying the reactor contact information they can enter Schedule B.2 by clicking on the green “Take me to Schedule B.2” button shown in Fig. 2.2 which will take them to the screen shown in Fig. 2.3.

By scrolling down the screen in Fig. 2.3 the user will be able to see the reactor license data that has already been entered for the facility shown. Item B.2.2, “NRC License Expiration Date” and Item B.2.3 “NRC License Type” can both be changed by clicking on the blue hyperlink for each of these items circled in Fig. 2.3 in the case where there was a license extension or the facility was decommissioned and the license changes from an “operating” license to a “possession only” license. On this page, users can also provide a shutdown date for a shutdown site. For operating sites, please provide a projected shutdown date if that information is available at this time.

Schedule B.2

This section covers the License Data for each Reactor at Oyster Creek.

Here's what we need to accomplish in this section:

1. All information in this schedule **should be pre-filled** based on historic data. **You must verify that this information is still correct.**
2. If you need to change the license type or dates, click on the value in the table below. If you need to change the reactor type or EIA number, please contact an administrator.

 This section is auto-generated based on historic data and should be reviewed for consistency.

Once you're ensured this information is correct, we will move to **B.3: Cycle Data**.

[◀ Take me back to Schedule B.1](#)
[▶ Take me to Schedule B.3](#)

B.2: Combined Reactor License Data - Oyster Creek (EIA 1903)

Schedule B slot	Oyster Creek	
B.2.1	Reactor Identifier (EIA Number)	1903
B.2.2	NRC License Expiration Date	04/09/2029
B.2.3	NRC License Type	Possession Only License
B.2.4	Reactor Type	BWR

Fig. 2.3: Schedule B License Data Front Screen

Once the License Data has been verified in Schedule B.2, the user can click on the green “Take me to Schedule B.3” button as shown in Fig. 2.3 . This will take the user to the cycle data screen shown in Fig. 2.4. Information for previous reactor cycles is provided for review and is shown in Fig. 2.4. Clicking on the hyperlinks at the bottom left of Fig. 2.4 allows the user to edit the information for previous cycles. It is possible to add data for single cycles via a web interface or download a form that can be filled out and uploaded for one or more cycles. In Fig. 2.4 the blue button on the left, “Add Cycle via Web Interface” opens up a menu for adding individual cycles and the “Upload Data” button allows for uploading a comma-separated value (CSV) file with one or more cycles in it.

Schedule B.3

This section covers Cycle Data for each Reactor at Oyster Creek.

Here's what we need to accomplish in this section:

1. We have automatically populated historic cycle data for you. **If any historic data is incorrect, please take this opportunity to correct it.**
 - o Click the **Cycle Number** in the tables below to edit data for that cycle.
2. **Add cycles since your last report** by clicking the **Add Cycle via Web Interface** button to add cycles one-by-one, or click **Upload Data** to bulk-upload multiple cycles at once.

Note: Alternatively, if you are entering all cycles in **Fuel Assembly Cycle History** you can skip this step, proceed to [Section C.1.2](#) and use Quick Task: **Upload Combined Assembly/Cycle Data**. The combined upload automatically updates three sections in one step: cycles in [Section B.3](#), assemblies in [Section C.1.1](#) and the fuel cycle history in [Section C.1.2](#).
3. **Review cycle data** for **each** reactor in the tables below to ensure that they contain the correct information:
 - o [Oyster Creek](#)

📌 Ensure new cycle data submitted in this submission period are correct. We will build upon your cycle data in the future sections.

Once you're sure this information is correct, we will move to **Schedule B Comments**.

◀ Take me back to Schedule B.2 ▶ Take me to Schedule B Comments

B.3: Cycle Data - Oyster Creek (EIA 1903)

Cycle Number	Start Date	Shut Down Date
1A	12/23/1969	09/18/1971
1B	11/11/1971	05/01/1972
2	06/20/1972	04/13/1973
3	06/04/1973	04/13/1974
4	07/01/1974	03/29/1975
5	05/25/1975	12/27/1975
6	03/10/1976	04/23/1977
7	08/01/1977	09/16/1978
8	12/05/1978	01/05/1980

Fig. 2.4: Schedule B.3 Cycle Data Front Screen

Clicking the “Add Cycle via Web Interface” button on the screen opens the form shown in [Fig. 2.5](#), which allows for manual entry of cycle data. Many of the forms provided in the web application provide consistency checking for the

data entered by the user. An example of the error checking provided by the interface is shown in Fig. 2.6. In this example the user enters the same cycle number that has already been used and the system returns an error message.

Fig. 2.6: Schedule B.3 Error Message

Clicking the “Upload Data” button brings the user to the form pictured in Fig. 2.7. The web application provides the ability to upload files with either only cycle data or files which contain both cycle data and assembly data. Fig. 2.7 shows two main options for uploading a data file, (1) built-in cycle file, and (2) built-in assembly-cycle data file. The built-in assembly-cycle data file combines schedules B.3, C.1.1, and C.1.2. Below these two boxes there is a statement “Displaying supported file formats for Schedule B.3 along with a hyperlink Click here to see all available formats.” Clicking on this link shows all upload file formats for all schedules. Only schedules supporting B.3 will be discussed in this section of the user guide.

Fig. 2.7: Schedule B.3 Cycle Data File Upload

Both options for uploading a file contain a drop-down menu if the user clicks on the gray button with a down arrow shown in Fig. 2.8 which brings up two options: (1) Download Sample and (2) Download Data for Editing.

Fig. 2.8: Schedule B.3 Links to Sample Datasheets for Importing Data Using a File

If a user clicks on “Download Sample.” This will download a xlsx file with a file name in the format “[facility name] Example - [year].xlsx” that can be opened using Microsoft Excel. An example file name for Callaway would be: “Callaway Cycle Example - 2022.xlsx.” An example of the file is shown in Fig. 2.9. This file will have an example of the format of the data that will be accepted but will not contain actual previously entered data therefore, if this method is used, the user will need to delete rows not used and replace this data with correct data.

A	B	C	D	E
cycle_number	cycle_reactor_name	start_date	shut_down_date	
24	Quad Cities 1	4/11/13	10/11/14	
25	Quad Cities 1	11/11/14	5/11/16	
26	Quad Cities 1	6/11/16	12/11/17	
27	Quad Cities 1	1/11/18	7/11/19	
23	Quad Cities 2	4/19/12	10/19/13	
24	Quad Cities 2	11/19/13	5/19/15	
25	Quad Cities 2	6/19/15	12/19/16	
26	Quad Cities 2	1/19/17	7/19/18	

Fig. 2.9: Example Cycle Data using “Download Sample”

Once the file is ready, the user can proceed by clicking the green button “Get Started” in Fig. 2.7. On the file upload page, users have two options: “Drag and Drop” files onto the page to upload or use the “Choose Files” button and browse for a file on the local computer. Note that in addition to xlsx format, csv and tab separated file formats are supported for upload as well.

File upload

Upload your facility data to automate the completion of the GC-859 form

Drag-and-drop your files here

Choose Files

 No file chosen

Get started in three easy steps:

- 1

Gather files

Export files from your source system. [Which formats are supported?](#)
- 2

Drag and drop files in upload pane

Alternatively, you can click the Choose Files button beneath the file drop area.
- 3

Follow provided instructions

If we have any questions about the files you import, we'll prompt you with instructions about how to resolve the issue.

Fig. 2.10: File Upload Page

Each uploaded data file is validated and errors are reported back to the user. As an example of an error in this manual a csv file with rows including only commas is used. When the file is imported, the rows with only commas will be flagged by the web application as an error. To assure that the errors are from these extra commas and not from the errors in the entered data, the user should open the file in a text editor to see if there are any extra rows full of commas. An example of an error message is shown in Fig. 2.11 below.

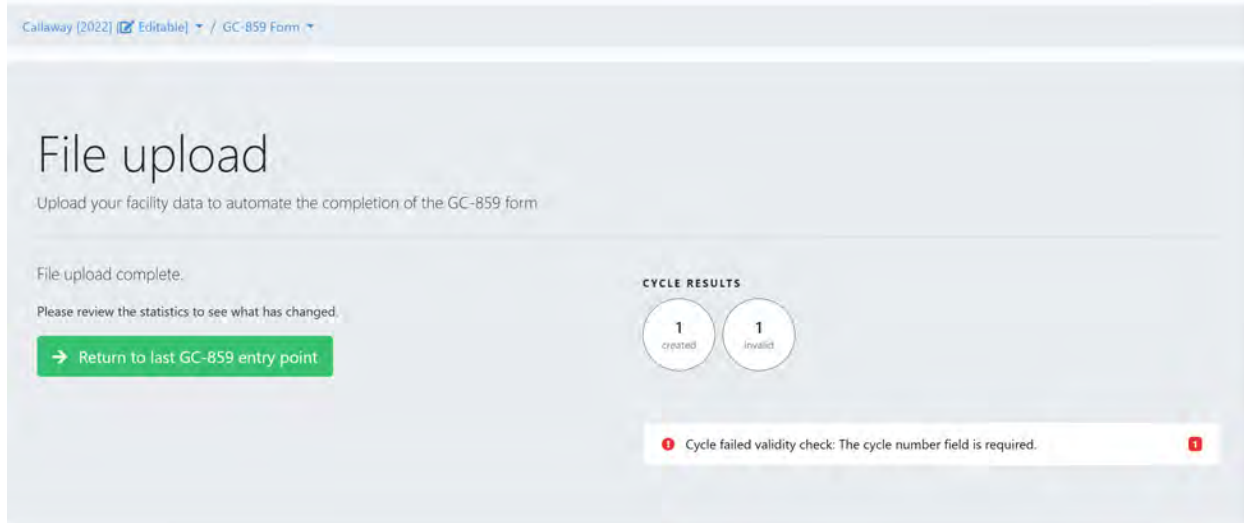

Fig. 2.11: Schedule B.3 Example Error Message for Cycle Data File Upload

If the user would like to download previous cycle data to update, they would click the “Download Data for Editing” button shown in Fig. 2.8. This will download a Microsoft Excel (xlsx) file with a file name in the format “[facility name] Data - [year].xlsx” that can be opened using Microsoft Excel. An example file name for Callaway would be: “Callaway Cycle Data - 2022.xlsx.” An example is shown in Fig. 2.12. This file will have the actual previously entered data and new records can be appended to the end of this data. Entries can be modified and will replace existing values and can be used to correct errors in previous data.

A	B	C	D
cycle_number	cycle_reactor_name	start_date	shut_down_date
24	Quad Cities 1	4/11/15	3/27/17
25	Quad Cities 1	4/27/17	3/18/19
26	Quad Cities 1	4/18/19	3/15/21
27	Quad Cities 1	4/15/21	3/15/23

Fig. 2.12: Schedule B.3 Example of Actual Cycle Data using “Download Data for Editing”

As an alternative to entering the cycle data on its own the user can enter assembly and cycle data simultaneously. In order to enter assembly and cycle data simultaneously, the user should click on the “Built-in Assembly-Cycle Data File” shown in Fig. 2.7. The user would click on the drop-down menu from the gray button inside that box that looks similar to the one identified in Fig. 2.8. This will display two options, “Download Sample” and “Download Data for Editing” and will provide sample data and previous data respectively. These files will allow the user to enter cycle and

assembly data in one csv file which will also satisfy the data request for Section C.1.1 that will be discussed in the next section.

If the user would like to review any of the information that they have entered they can click the green “My GC-859” at the top of the screen circled in red on Fig. 1. Clicking here will bring them to a screen similar to that in Fig. 2.13. The area on the left circled in red can be used to check if the cycle (or assembly information if using C.1.1 import form) has been added as it shows a summary of the number of added and modified records.

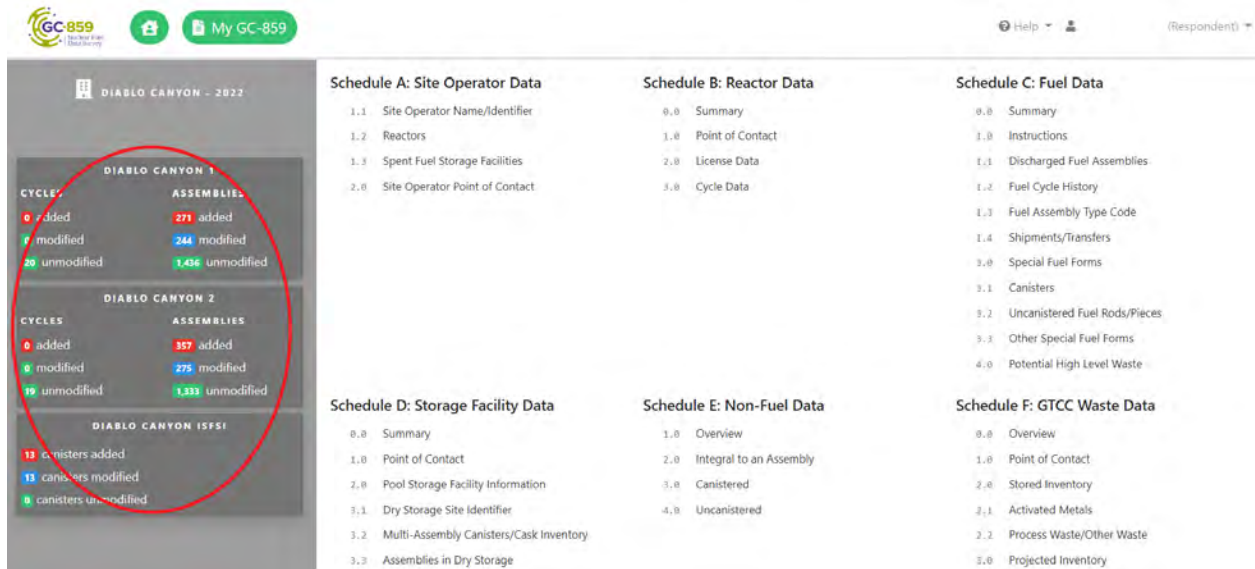

Fig. 2.13: “My GC-859” Screen Including Data Summary

2.1 Schedule B Comments

Finally, user can proceed to the comment section using the button “Take me to Schedule B Comments” shown above in Fig. 2.4. Users provide any comments concerning Reactor Data (Section B.1, B.2 and B.3) and should label comments by the Schedule and Item Number to which they refer. To enter and edit comments, users click the “Edit Comments” button in Fig. 2.14. After completing comments proceed to Schedule C.

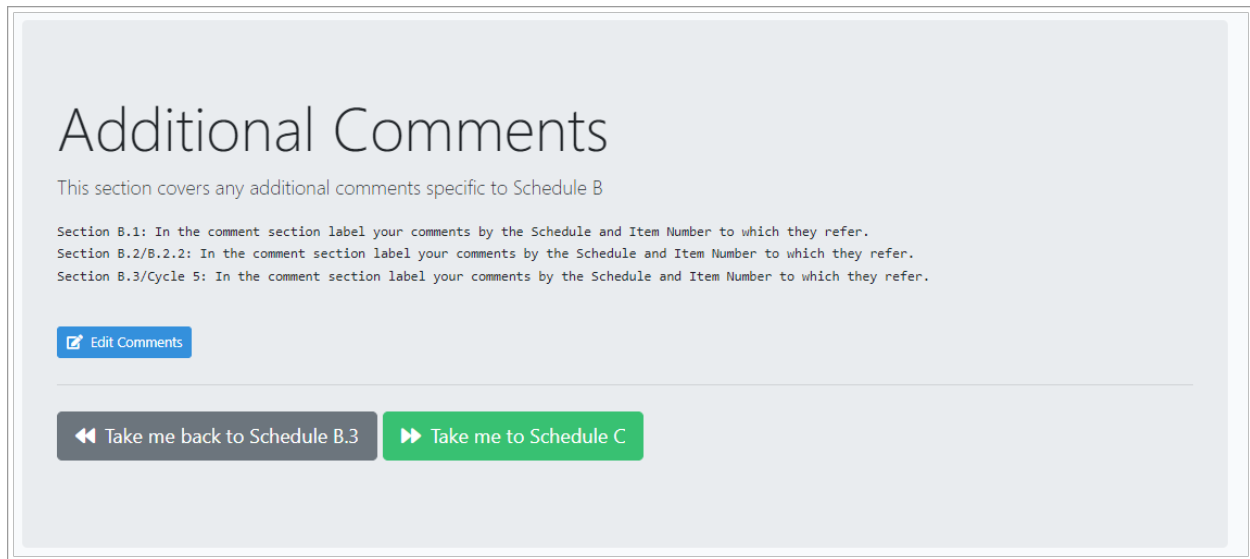

Fig. 2.14: Reactor Data Comments

SCHEDULE C: FUEL DATA

Once all of the information from Schedule B has been reviewed and entered, the user can proceed to Schedule C by clicking on the green “Take me to Schedule C” button shown in Fig. 2.14. Upon clicking this button, or navigating to Schedule C using other methods previously discussed such as clicking the “My GC-859” button (see Fig. 1), the user will see a screen similar to that in Fig. 3.1 below. The counters show a high-level summary of what’s included in the base data, and how much information a user already provided. After reviewing the summary users can proceed to Schedule C.1.

Reactor	Assemblies added for 2023 survey year [C.1.1]	Unmodified Assemblies from base data	Modified Assemblies from base data	Total
Oyster Creek	0	3944	0	3944
Total	0	3944	0	3944

Fig. 3.1: Schedule C Front Screen

In Schedule C.1, Fig. 3.2, users can review instructions and proceed to Schedule C.1.1 on site.

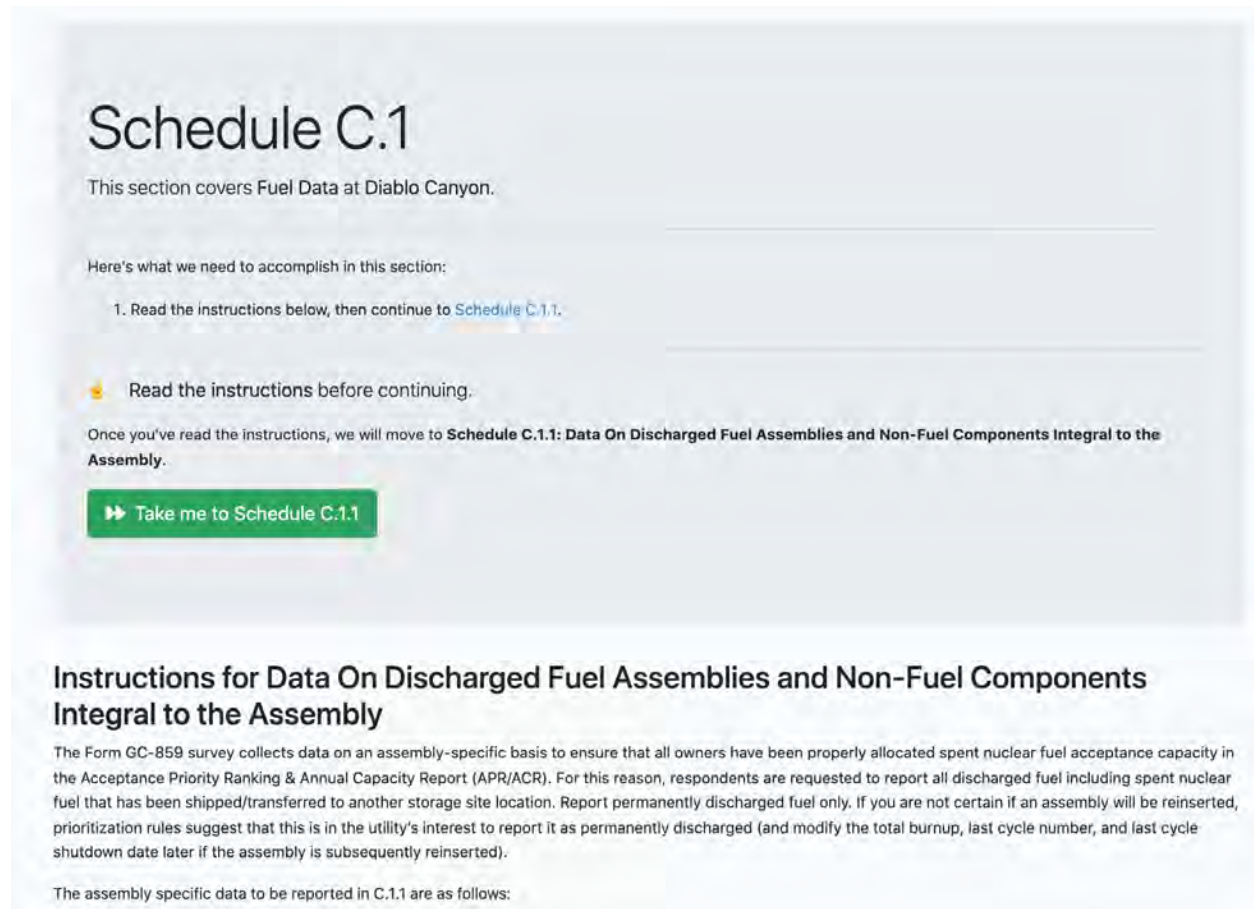

Fig. 3.2: Schedule C.1 Front Screen

3.1 Schedule C.1.1: Data on Discharged Fuel Assemblies

Once the user has read the instructions on the Schedule C.1 page, they can click on the green “Take me to Schedule C.1.1” button to proceed to entering fuel assembly data. The next screen the user will encounter will be similar to Fig. 3.3 below.

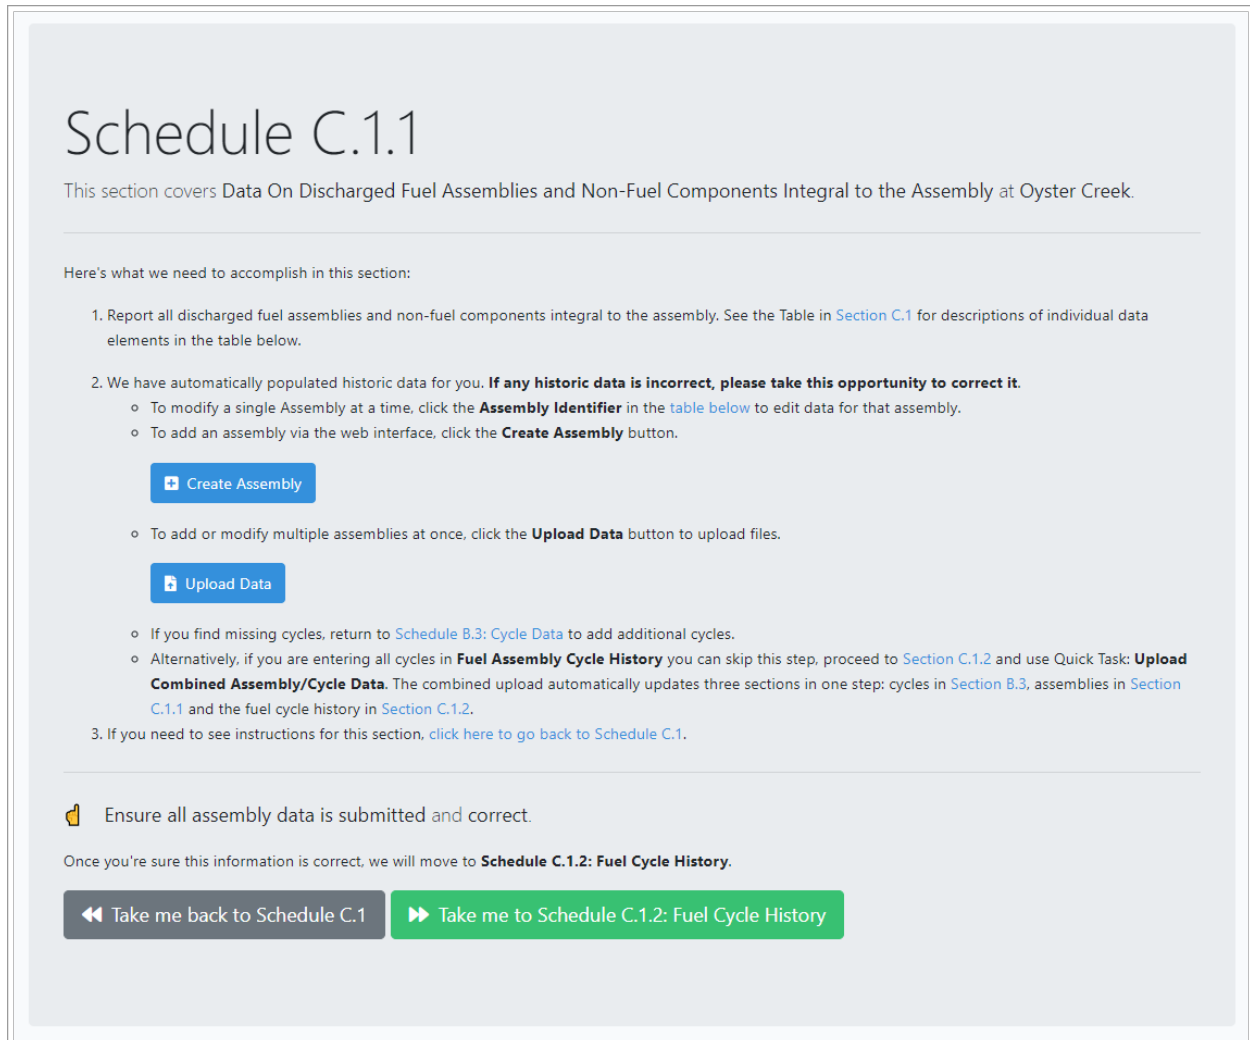

Fig. 3.3: Schedule C.1.1 Front Screen

If the user scrolls below what is shown in Fig. 3.3 on the Schedule C.1.1 form, they will be able to see existing assembly information that has been previously entered. An example of what a user would see is shown below in Fig. 3.4. Items that are blue are hyperlinked. Some of these will take the user to a screen where they can review and modify the data. In addition, user can use a search bar on the right of the screen to search a specific assembly information.

Fig. 3.4: Schedule C.1.1 Data on Discharged Fuel Assemblies and Non-Fuel Components Integral to the Assembly. (Data shown are for example only.)

If the user needs to add new assembly data, they can click on the blue “Create Assembly,” or “Upload Data” buttons shown in the “Create Assembly” form will take the user to a form, shown in Fig. 3.5, where they can enter individual assembly data. Data that is required contains an asterisk (*) next to it. If this data is not entered the user will see an error message before they can proceed.

Fig. 3.5: Schedule C.1.1 Add Individual Assembly

Fig. 3.5 has a drop-down menu of fuel assembly type codes. For a description of the assembly that these codes are associated with, the user can go to Appendix E of the survey form. This can be accessed by clicking the help button at the upper right part of the screen circled in Fig. 3.6 . This will show a drop-down menu and if the user selects “E Fuel Assembly Type Codes,” they will see a screen similar to the screen in Fig. 3.6 .

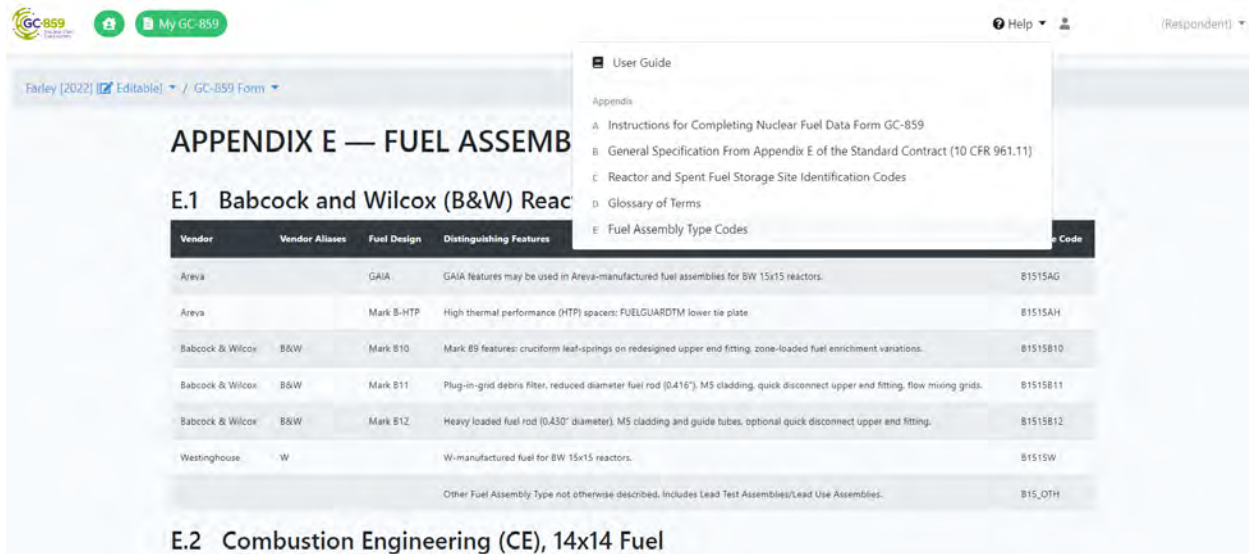

Fig. 3.6: Appendix E of GC-859 from User Guide of Web Application

If the user clicks the “Upload Data” button shown in Fig. 3.3, they will be taken to a screen similar to Fig. 3.7 . This screen has two options for uploading data files for Schedule C.1.1. The option on the left, “Built-In Assembly File,” includes only assembly data. When using this option, the cycle data from Schedule B must be input first. The option on the right of Fig. 3.7 , “Built-in Assembly-Cycle Data File,” is the same format as the file also available from the Schedule B file upload shown in Fig. 2.7 and combines cycle (B.3.0), cycle history (C.1.2) and assembly data specification (C.1.1) into a single file.

Similar to the file upload screen for Schedule B shown in Fig. 2.7 , clicking either of the gray buttons for each file format option, one is circled in red on Fig. 3.7 , will bring up two options for file upload “Download Sample” and “Download Data for Editing.” Similar to the cycle data, clicking on the “Download Sample” option will download a Microsoft Excel (xlsx) file with sample data in the correct format. Clicking on the “Download Data for Editing,” will download a Microsoft Excel (xlsx) file with actual, previously entered data.

Fig. 3.7: Schedule C.1.1 File Upload

An example of the format needed for the assembly only data is shown in Fig. 3.8 . The units for “Initial Uranium” is kilograms and “Initial Enrichment” is in units of weight percent of U-235. Codes for the assembly type can be found in Appendix E of the GC-859 survey as shown in Fig. 3.6 .

Since this data in Fig. 3.8 was generated by clicking on the “Download Sample” option shown in Fig. 3.7 , it is example data used only to provide the proper data format.

Fig. 3.8: Schedule C.1.1 Example Assembly Only Data Format

An example of the format needed for the combined cycle, cycle history, and assembly data is shown in Fig. 3.9 . “initial_uranium” is in units of kilograms, “initial_enrichment” is in units of weight percent U-235 and “max_burnup” is in units of MWd/MTU. This data format accounts for assemblies that have been burned in multiple cycles. For the example data shown in Fig. 3.9 , the first three rows are for the same assembly, but each row represents a different cycle that the assembly was burned in (cycle history as in schedule C1.2). The burnups entered for this data are the cumulative burnup at the end of each cycle. For this assembly, Columns A through O are repeated for the same assembly with the differences in the cycle information shown in Columns P through T. Entering assembly and cycle information using this data format can be done when entering information in Schedule B.3 shown in Fig. 2.7 .

Fig. 3.9: Schedule C.1.1 Example Cycle and Assembly Data Format

Once the user completes the Microsoft Excel (xlsx, or Comma Separated csv, or tab delimited) data file with the data that they wish to add or modify, the user then clicks the green “Get Started” button on the lower left portion of Fig. 3.7 . This will bring the user to a screen in Fig. 3.10 where they will be prompted to upload the file by dragging and dropping the file onto this part of the screen or navigating to the file location by selecting the “choose file” button below the blue drag and drop area. Upon dropping the file, the application will perform consistency checks and ask the user to finish uploading. A user may need to fix issues found in the consistency checks to finish uploading.

Fig. 3.10: File Upload Screen for Data Files

3.2 Schedule C.1.1: Constellation Specific Assembly Data Format

Constellation (formerly Exelon) facilities will have additional options for uploading assembly data using the Cask Loader format. If the user is entering data for an Constellation facility and they click on the blue “Upload Data” button from the main Schedule C.1.1 screen shown in Fig. 3.3, they will be taken to a screen similar to that shown in Fig. 3.11.

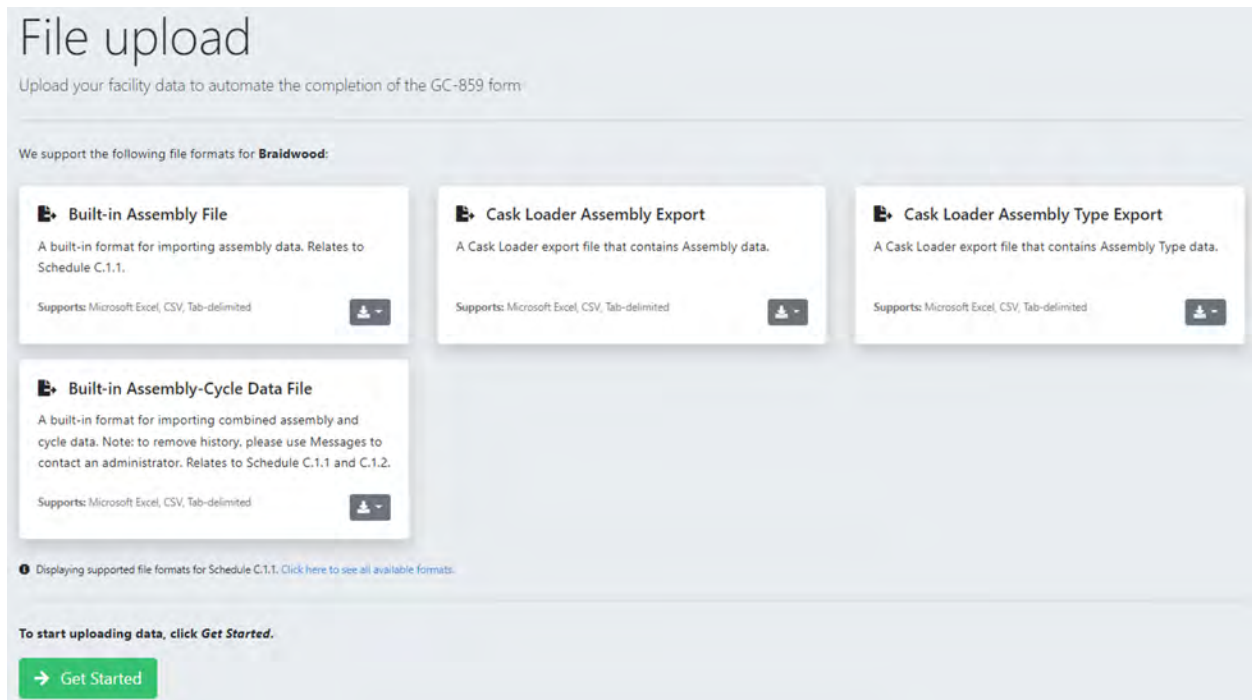

Fig. 3.11: Schedule C.1.1 File Upload for Constellation Facilities

The process for downloading and entering the Microsoft Excel (xlsx) data into the correct format is similar to that previously discussed, however there are two additional data file formats available for Constellation facilities shown in Fig. 3.11. This includes “Cask Loader Assembly Export” and “Cask Loader Assembly Type Export.”

An example of the “Cask Loader Assembly Export” format is shown below in Fig. 3.12.

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P

Fig. 3.12: Schedule C.1.1 Example of Cask Loader Assembly Export Format for Constellation Facilities

The reactor identifier from Cask Loader format will need to be altered to conform to the data recognizable by the GC-859 survey web program. The program will check the data and send the user through automated steps where it will predict the data that conforms to that in the database and ask the user to confirm the predictions. For example Fig. 3.12 shows “reactor_unit_id” as “118”. An example of what a user might see as part of this process is shown in Fig. 3.13. After uploading the file shown partially in Fig. 3.12, the program asks the user if reactor id 118 is associated with a correct reactor unit.

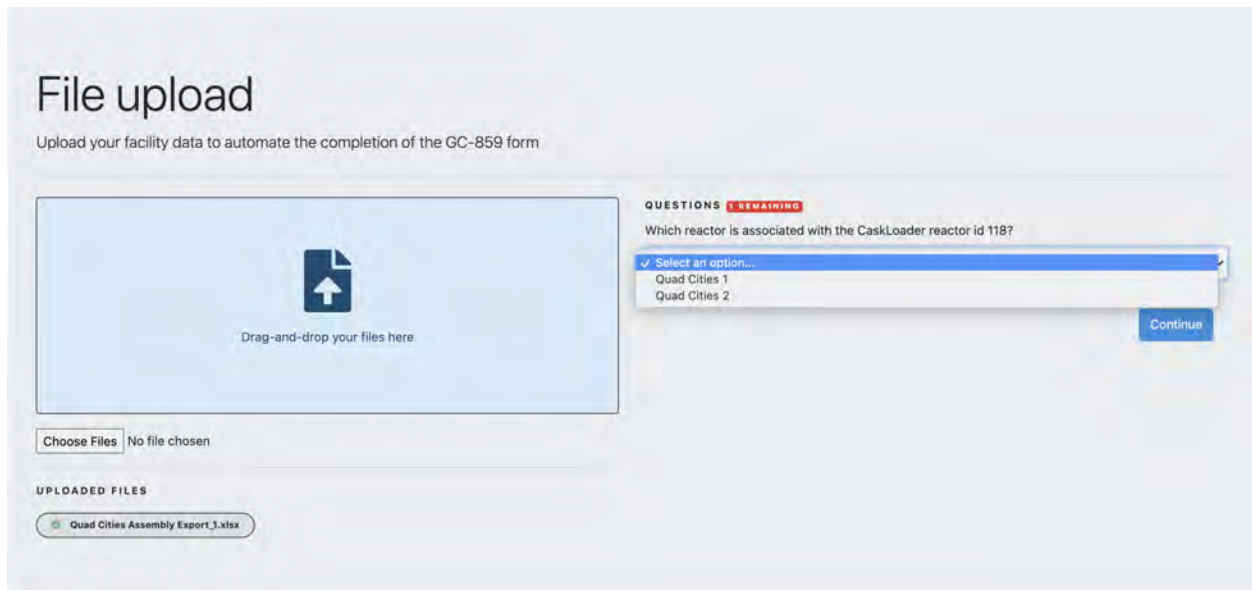

Fig. 3.13: Schedule C.1.1 Constellation Specific Data Questions

Cask Loader assembly types are different from those in the GC-859 survey program, so the user will be asked to upload an Assembly Type export from Cask Loader to provide a translation between the two formats. This is shown in Fig. 3.14, where the web application has identified that there are four assembly types that are not known.

Fig. 3.14: Schedule C.1.1 File Upload for Cask Loader Assembly Type Export for Constellation Facilities

The user can also upload an example of the Cask Loader Assembly Type Export form by clicking on the drop-down menu in the “Cask Loader Assembly Type Export” box shown in Fig. 3.11. Clicking the drop-down will provide a sample file with this file format for the user to modify. An example of this file format is shown in Fig. 3.15.

Fig. 3.15: Schedule C.1.1 Example of Cask Loader Assembly Type Export File for Constellation Facilities

After uploading the Cask Loader Assembly Type Export file in the screen showed in Fig. 3.14, the web application will check the data and will request that the user provide a translation between the assembly types specified in the Cask Loader Assembly Export File and the GC-859 Assembly types. An example of this is shown in Fig. 3.16. The web application uses data from the assembly type export (e.g., product line [column C], vendor [column D], cladding [column M] as shown in Fig. 3.15) to group similar types and asks the user to select a corresponding GC-859 assembly type from a drop down list as shown in Fig. 3.16 that closely corresponds to the group.

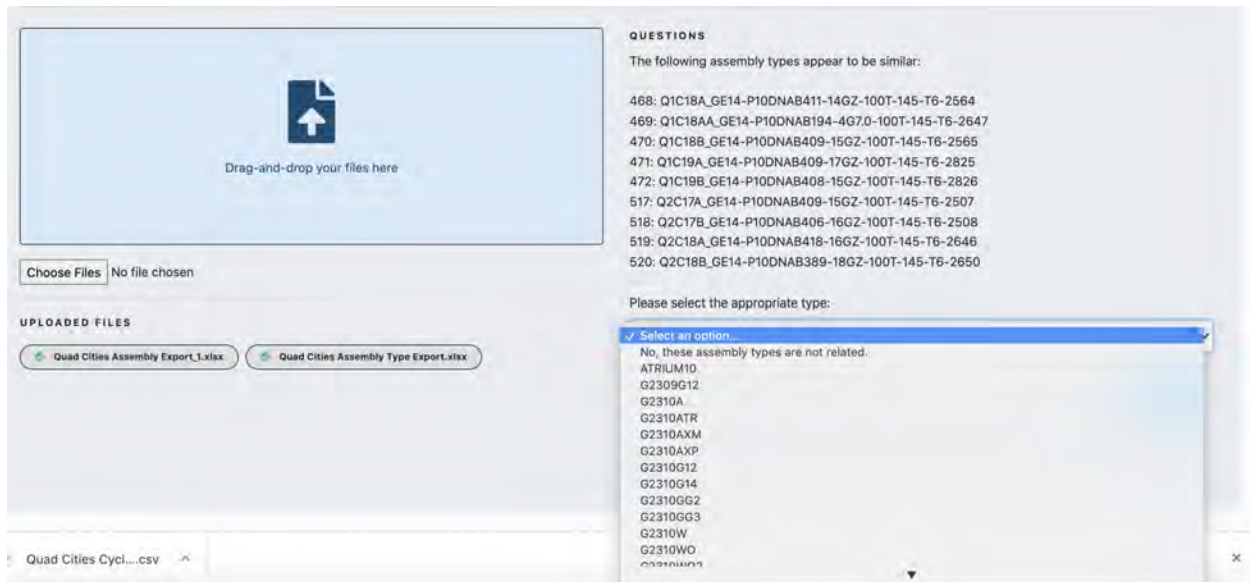

Fig. 3.16: Schedule C.1.1 Cask Loader Specific Assembly Type Questions

3.3 Schedule C.1.1: Southern Nuclear Specific Assembly Data Format

Southern Nuclear facilities will also have an additional option for uploading assembly data using the TracWorks format. If the user is entering data for a Southern Nuclear facility and they click on the blue “Upload Data” button from the main Schedule C.1.1 screen shown in Fig. 3.3, they will be taken to a screen similar to that in Fig. 3.17.

Fig. 3.17: Schedule C.1.1 File Upload for Southern Nuclear Facilities

The process for downloading and entering the *xlsx*/*csv*/*tab* data into the correct format is similar to that previously discussed, however there is an additional data file format available for Southern Nuclear facilities. The files for using this option are accessible by clicking the gray drop-down box in Fig. 3.17 that is within the white box labeled “TracWorks GC-859 C.1.1 Export.” An example of the “TracWorks GC-859 C.1.1 Export” file format is shown below in Fig. 3.18.

A	B	C	D	E	F	G	H	I	J	K	L	M

Fig. 3.18: Schedule C.1.1 Example of TracWorks Export Format for Southern Nuclear Facilities

Some of the data in the TracWorks format will need to be translated in order to be recognizable by the GC-859 survey web program. The program will check the data and send the user through automated steps where it will predict the data that is compatible with the database. The user will then be asked to confirm the predictions. After uploading the data file format shown partially in Fig. 3.18, the program asks the user a series of questions shown in Fig. 3.19. The questions associated with the TracWorks data that the GC-859 web program was unable to recognize in Fig. 3.19 are (1) which reactor does the excel spreadsheet Book4.xlsx from the example case contain data for, (2) what non-fuel component does “FC” describe, and (3) for storage location “2001” in the example case, does this refer to the pool or ISFSI.

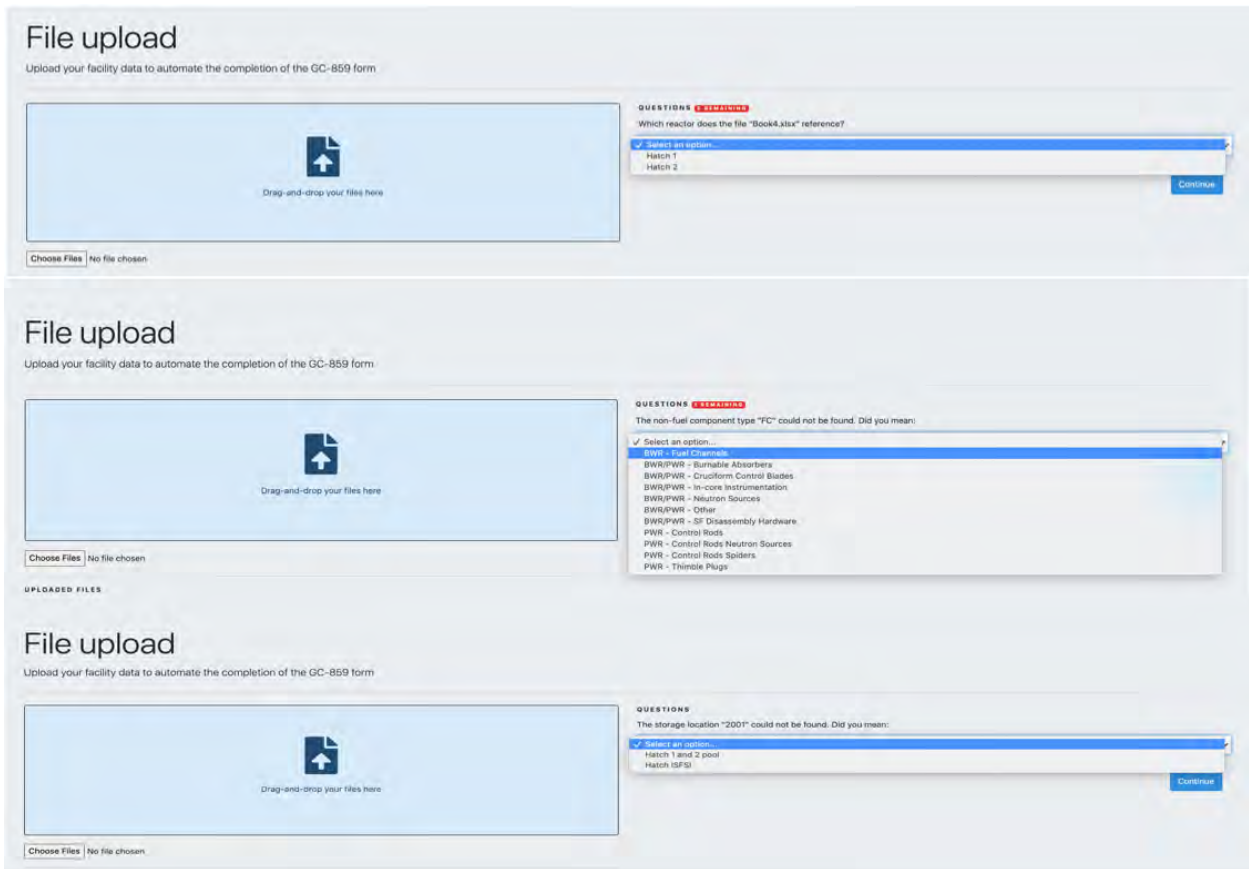

Fig. 3.19: Schedule C.1.1 TracWorks Specific Data Questions

3.4 Schedule C.1.2: Fuel Cycle History

As stated in the GC-859 form, Schedule C.1.2 is voluntary. Cycle data is entered or uploaded in Schedule B.3 and assembly data is entered or uploaded in Schedule C.1.1. The cycle history information can be entered during data entry into B.2 or C1.1 as discussed above. If the history information is entered during data entry to B.3 or C1.1, the information is displayed in Schedule C.1.2, Fuel Cycle History. Schedule C.1.2 can be entered by clicking the green “Take me to Schedule C.1.2: Fuel Cycle History,” shown on the bottom of Fig. 3.3 or navigating to Schedule C.1.2 using other methods previously discussed such as clicking the “My GC-859” button, a user will see a screen similar to the one below in Fig. 3.20.

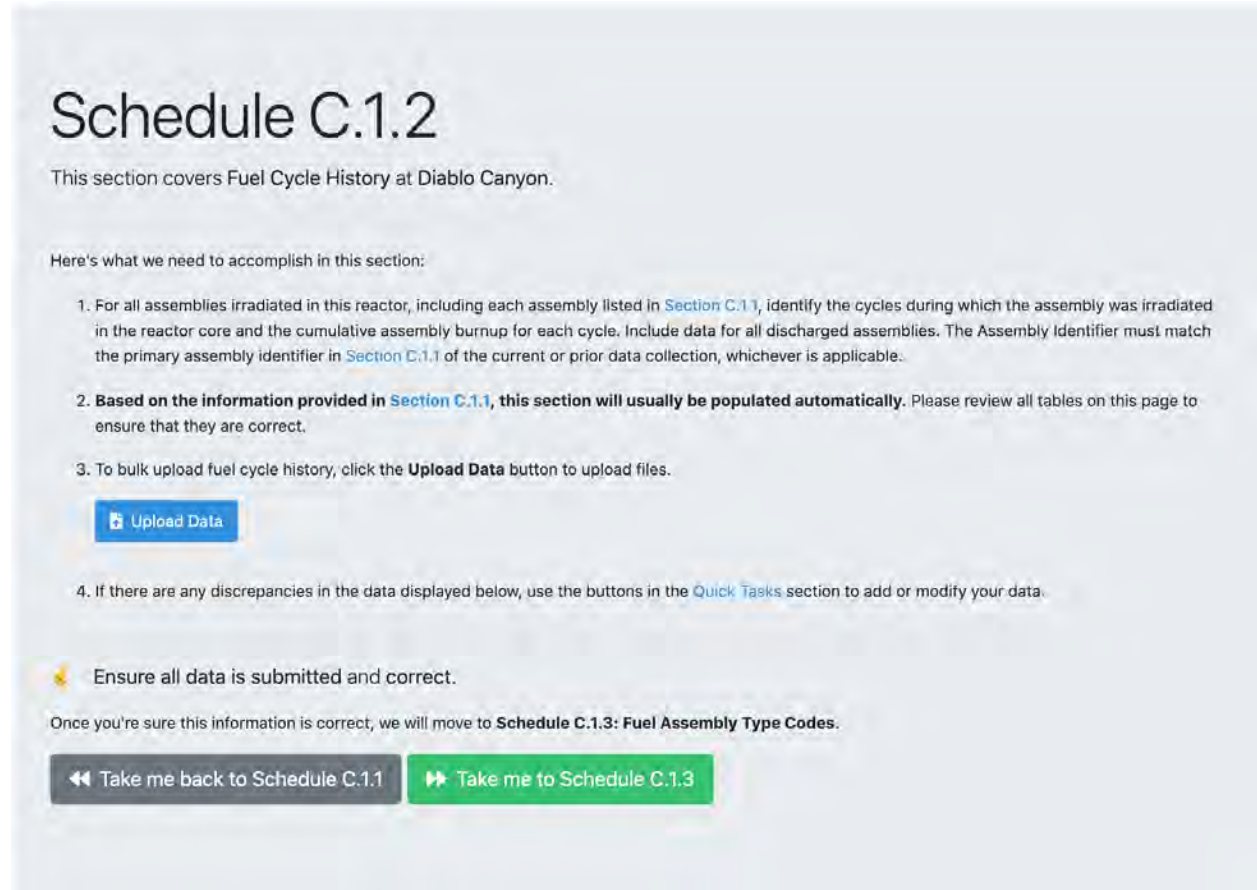

Fig. 3.20: Schedule C.1.2 Fuel Cycle History Front Screen

Scrolling down from the screen shown in [Fig. 3.20](#) a user can review information and continue to modify and add new information from previous schedules if desired. Immediately below the information in [Fig. 3.20](#), a user can scroll down to see information similar to [Fig. 3.21](#). There are options here for uploading assembly and cycle data as discussed in previous schedules. In addition there is an option for exporting the data.

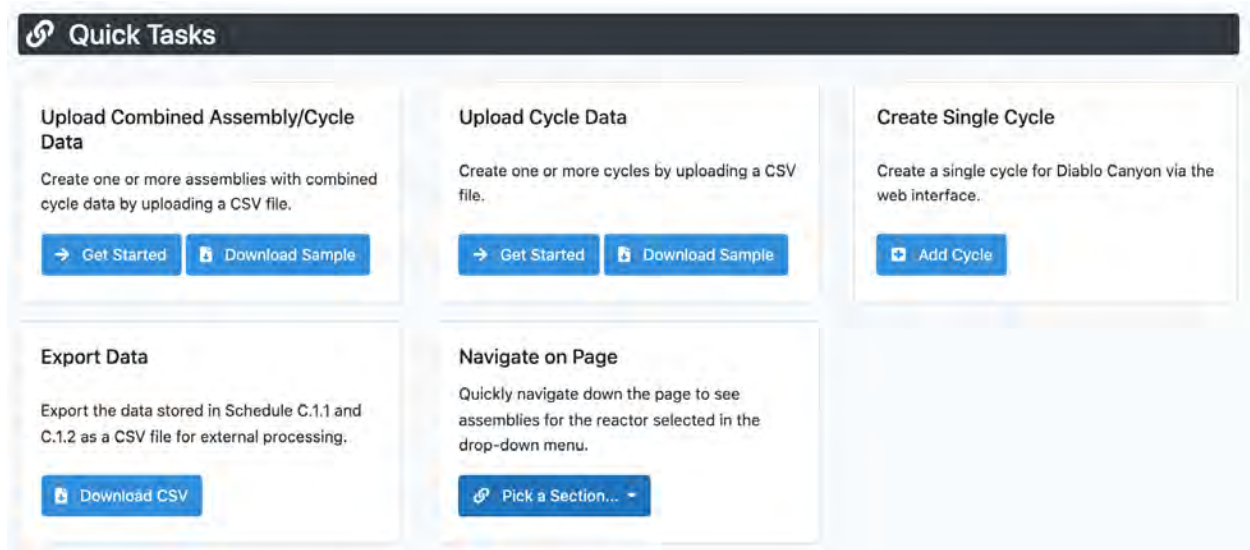

Fig. 3.21: Schedule C.1.2 Quick Tasks

Further down the Schedule C.1.2 page the user can scroll down to see fuel assembly and cycle information similar to that in Fig. 3.22. Blue hyperlinks can be clicked to navigate and review this information.

Cycles for [Diablo Canyon 2 / 3502]

Assembly counts are displayed underneath the cycle number in parenthesis.

Cycle 1 (193)	Cycle 2 (193)	Cycle 3 (193)	Cycle 4 (193)	Cycle 5 (193)	Cycle 6 (193)	Cycle 7 (193)	Cycle 8 (193)	Cycle 9 (193)	Cycle 10 (193)
Cycle 11 (193)	Cycle 12 (193)	Cycle 13 (193)	Cycle 14 (193)	Cycle 15 (193)	Cycle 16 (193)	Cycle 17 (186)	Cycle 18 (169)	Cycle 19 (79)	Cycle 20 (0)
Cycle 21 (0)	Cycle 22 (0)	Cycle 23 (4)	Cycle 24 (2)	Cycle 25 (2)	Cycle 26 (2)

Diablo Canyon 1	A04	1	

Fig. 3.22: Schedule C.1.2 Assembly and Cycle Information

Clicking the “Upload Data” button shown in Fig. 3.20 will show some options for uploading files. There are three available formats for uploading cycle data shown. Two of these data uploading formats have been previously covered in Schedules B.3, and C.1.1, “Built-in Cycle File,” and “Built-in Assembly-Cycle Data File,” respectively. Clicking on the gray boxes similar to those circled in Fig. 2.8 and Fig. 3.7 will bring down the drop-down menus that will have two options, “Download Sample,” will download a Microsoft Excel (xlsx) file in the correct format for uploading, while “Download Data for Editing,” will download a Microsoft Excel (xlsx) file of previously entered data that can be appended or modified.

File upload

Upload your facility data to automate the completion of the GC-859 form.

We support the following file formats for **Diablo Canyon**:

- Built-in Cycle File**
A built-in format for importing cycle data. Relates to Schedule B.3.
Supports: Assembly-Count, Cycle, Tube-assembly
- Built-in Assembly-Cycle Data (Condensed) File**
A built-in format for importing combined assembly and cycle data condensed on a single line. Note: to remove history, please use Messages to contact an administrator. Relates to Schedule C.1.1 and C.1.2.
Supports: Assembly-Count, Cycle, Tube-assembly
- Built-in Assembly-Cycle Data File**
A built-in format for importing combined assembly and cycle data. Note: to remove history, please use Messages to contact an administrator. Relates to Schedule C.1.1 and C.1.2.
Supports: Assembly-Count, Cycle, Tube-assembly

Fig. 3.23: Schedule C.1.2 Cycle Data File Upload

The middle option on Fig. 3.23, “Built-in Assembly-Cycle Data (Condensed) File” is an available format for uploading data onto a single line. To use this data format, the user needs to have created cycle information in Schedule B.3 and assembly information in Schedule C.1.1. The assembly cycle information will be entered in the format shown in below. This differs from the format available in “Built-In Assembly-Cycle Data File” shown in Fig. 3.9 in that each assembly would have its own row in the table rather than being repeated for each cycle it is burned in.

Assembly Identifier	Cycle 1 Reactor	Cycle 1 Number	Cycle 1 Cumulative Exposure	Cycle 2 Reactor	Cycle 2 Number	Cycle 2 Cumulative Exposure	Cycle 3 Reactor	Cycle 3 Number	Cycle 3 Cumulative Exposure	Cycle 4 Reactor	Cycle 4 Number	Cycle 4 Cumulative Exposure	Cycle 5 Reactor	Cycle 5 Number	Cycle 5 Cumulative Exposure

Fig. 3.24: Schedule C.1.2 Assembly-Cycle Data Condensed File

3.5 Schedule C.1.2: Constellation Specific Cycle History Data Format

Constellation plants have specific Constellation Cycle History Report format that can be used. Instead of seeing the screen in Fig. 3.23, Constellation plants will see a screen similar to that in Fig. 3.25, which contains the fourth data format option: “Constellation Cycle History Report.” An example of the format for the Constellation Cycle History Report is shown in Fig. 3.26.

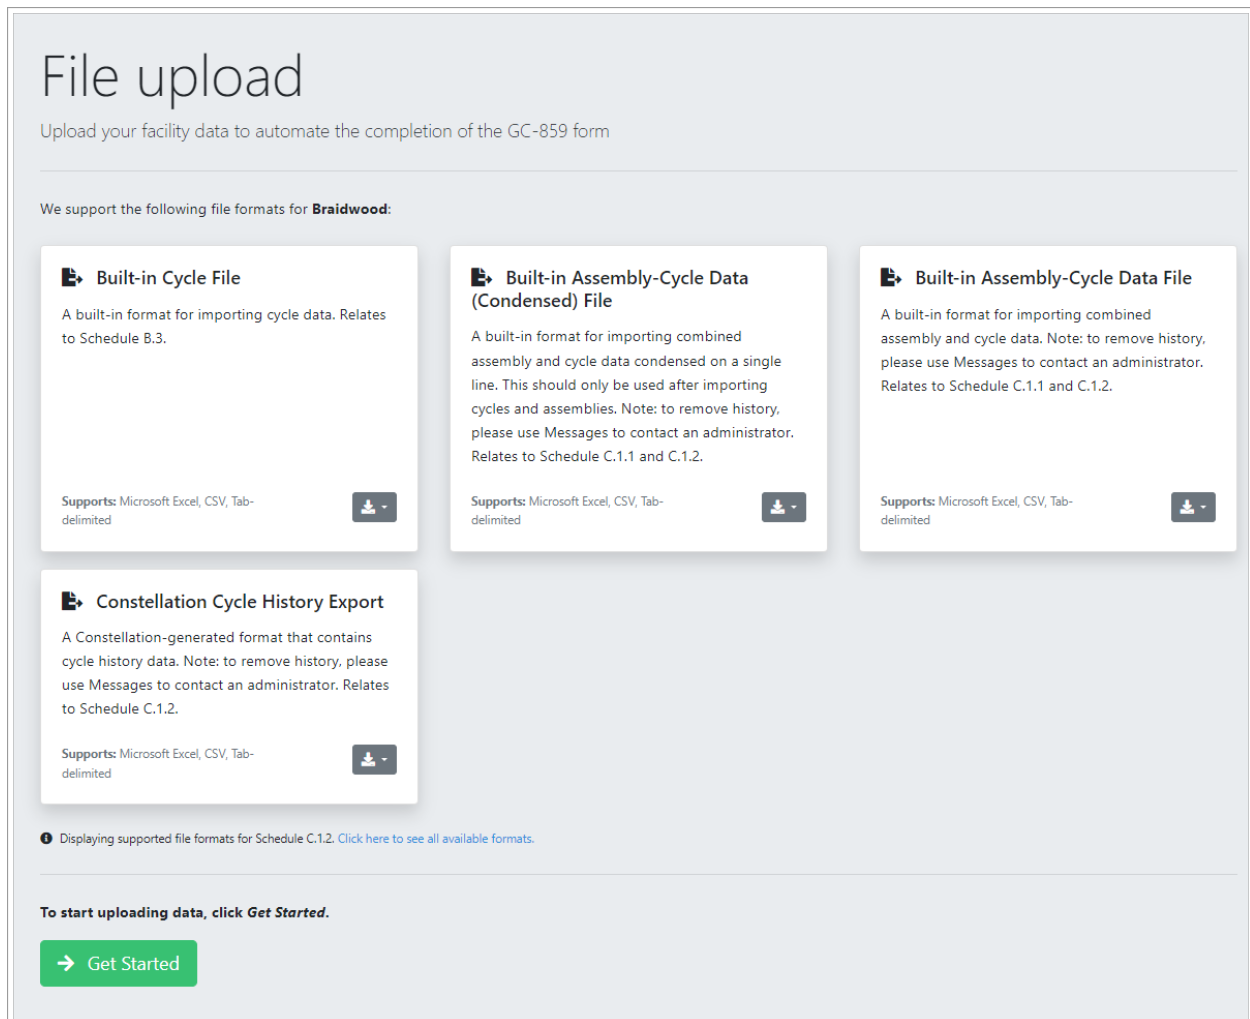

Fig. 3.25: Schedule C.1.2 Constellation Cycle Data File Upload

Assembly	Discharge	Discharge	Cycle 1	Unit	EOC 1 Date	Cycle 1 Expos	Cycle 2	Unit	EOC 2 Date	Cycle 2 Ex	Cycle 3	Unit	EOC 3 Date	Cycle 3 Ex
ABC123	1/1/2021	12345.67	1	Unit 1	1/2/2017	22917.53	2	Unit 1	7/3/2018	44238.33	3	Unit 1	1/2/2020	51074.26
ABC124	1/2/2021	12345.67	1	Unit 2	1/3/2017	32041.08363	2	Unit 2	7/4/2018	48038.31	3	Unit 2	1/3/2020	60916.95
ABC125	1/3/2021	12345.67	1	Unit 1	1/2/2017	25095.81795	2	Unit 1	7/3/2018	44386.6	3	Unit 1	1/2/2020	55098.19
ABC126	1/4/2021	12345.67	1	Unit 2	1/3/2017	32868.26	2	Unit 2	7/4/2018	48737.26	3	Unit 2	1/3/2020	59146.61
ABC127	1/5/2021	12345.67	1	Unit 1	1/2/2017	29123.88774	2	Unit 1	7/3/2018	49298.91	3	Unit 1	1/2/2020	57033.77
ABC128	1/6/2021	12345.67	1	Unit 2	1/3/2017	23639.3097	2	Unit 2	7/4/2018	45664.06	3	Unit 2	1/3/2020	52903.79
ABC129	1/7/2021	12345.67	1	Unit 1	1/2/2017	29370.08836	2	Unit 1	7/3/2018	50086.52	3	Unit 1	1/2/2020	59260.9
ABC130	1/8/2021	12345.67	1	Unit 2	1/3/2017	23393.87752	2	Unit 2	7/4/2018	44446.75	3	Unit 2	1/3/2020	51199.63
ABC131	1/9/2021	12345.67	1	Unit 2	1/3/2017	29689.16329	2	Unit 2	7/4/2018	44959.77	3	Unit 2	1/3/2020	53238.18

Fig. 3.26: Schedule C.1.2 Example Format for Constellation Cycle History Report

Similar to the assembly data loaded using the Cask Loader format for Schedule C.1.1, the reactor identifiers will need to be translated to data recognizable by the GC-859 survey web program. The program will check the data and send the user through automated steps where it will predict what the data is that conforms to that in the database and ask the user to confirm the predictions. For example Fig. 3.26 shows “reactor_unit_id” as “118.” A user would see the same questions in Fig. 3.13 where in this example the program asks the user if reactor id 118 is associated with Quad Cities 1 or 2.

3.6 Schedule C.1.3: Fuel Assembly Type Codes

When Schedule C.1.2 data entry is complete the user can advance to Schedule C.1.3 by clicking the green button “Take me to Schedule C.1.3” shown on the bottom of Fig. 3.20 or by navigating to Schedule C.1.3 using other methods previously discussed such as clicking the “My GC-859” button.

The information in Schedule C.1.3 is only for review and will look similar to that in Fig. 3.27 as this information was previously entered as part of the assembly information in Schedule C.1.1 or C.1.2. If the assembly type information displayed in Schedule C.1.3 needs to be changed, the data in Schedule C.1.1 or C.1.2 will need to be modified. A description of the fuel assembly associated with each code can be found in Appendix E of the GC-859 survey which is accessible through the help menu shown in Fig. 3.6 .

Diablo Canyon 1	
Assembly Type	Assembly Count
C1616WT	2
G2307G2A	2
G4608G4B	2
W1717WL	338
W1717WP	940
W1717WV5	404
XSL16W	2

Total Assembly count for Diablo Canyon 1 = 1690
 Count of Assemblies that already have a Fuel Assembly Type Code assigned = 1690

Diablo Canyon 2	
Assembly Type	Assembly Count
C1414A	1
G4609A2	1
W1717WL	337
W1717WP	932
W1717WV5	341
WST_OTH	1

Fig. 3.27: Schedule C.1.3 Assembly Type Information

3.7 Schedule C.1.4: Shipments/Transfers of Discharged Fuel

Schedule C.1.4 covers shipments/transfers of discharged fuel. If fuel is to be shipped or transferred a user can click on the blue “Create Fuel Transfer” request button shown in Fig. 3.28.

Fig. 3.28: Schedule C.1.4 Front Screen

If the user clicks on the blue “Create Fuel Transfer Request” button shown on Fig. 3.28, this will display a form needed to submit a request to transfer an assembly similar to that shown in Fig. 3.29.

Fig. 3.29: Schedule C.1.4 Request Assembly Transfer Form

After the user fills out the form shown in Fig. 3.29 and clicks the blue “Submit” button, it will send an email to the receiving plant contact to verify that the assembly was transferred there. An email will also be sent to the system administrator. This email will contain a notification that there is a fuel transfer request and it can be viewed by clicking on the link within the message. The message will look similar to Fig. 3.30.

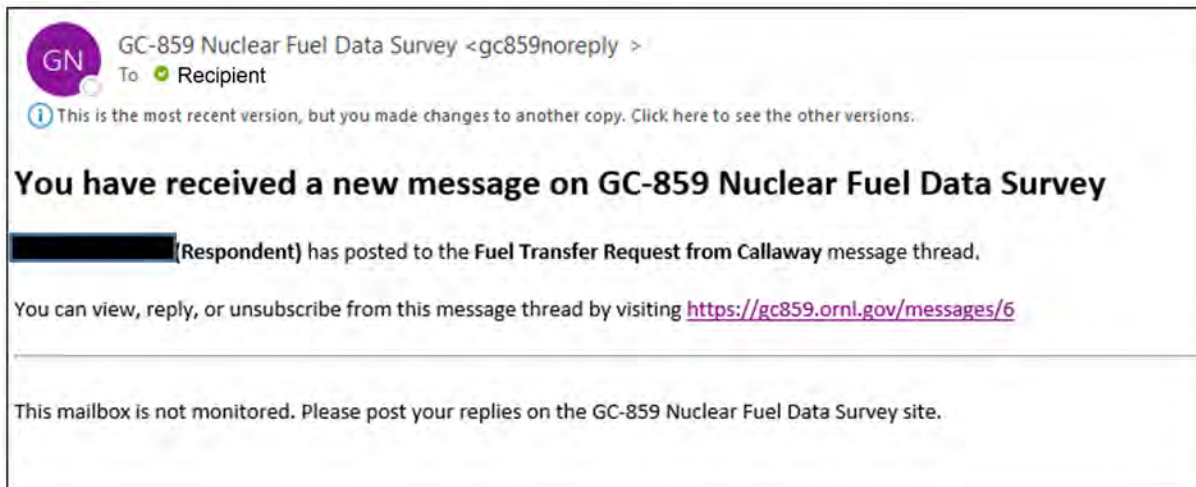

Fig. 3.30: Schedule C.1.4 Example Email Sent for Requesting Fuel Transfer

The recipient of the email can either click on the link to view the message or navigate to their messages from within the web application by clicking on their name in the upper right-hand corner of the screen which will reveal a drop-down menu where they can click on the “Messages” shown in to see their messages.

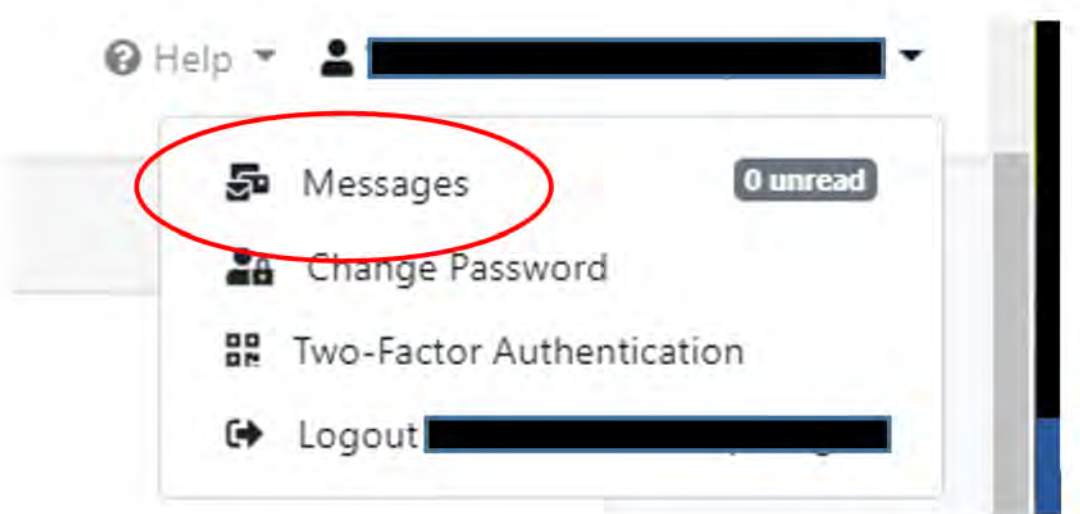

Fig. 3.31: Accessing Messages

3.8 Schedule C.2: Projected Assembly Discharges

Since Schedule C.2 was removed from the GC-859 survey, navigating to this section does not provide any opportunity to view, change or input data.

3.9 Schedule C.3: Special Fuel Forms

The next schedule where a user can provide data is Schedule C.3 for special fuel forms. If a user needs to enter information about a single assembly canister they can click on the blue “yes” button shown in Fig. 3.32.

Fig. 3.32: Schedule C.3 Front Screen

If a user selects the “yes” button on Fig. 3.32 they will be taken to a screen similar to that in Fig. 3.33.

3.10 C.3.1 Special Fuel Form - Canisters

Schedules C.3.1.1, C.3.1.2, & C.3.1.3

This section covers Single Assembly Canisters at Braidwood.

A canister is defined as any single assembly canister designed to confine contents that may be delivered to a DOE facility. Within this schedule, canistered material may include damaged assemblies, reconstituted assemblies, fuel rods that have been removed from an assembly, and miscellaneous fuel. Empty canisters should not be reported.

Here's what we need to accomplish in this section:

1. Add **single assembly canisters** for **Braidwood**:
 - Upload one or more single assembly canisters by clicking the **Upload Data** button.

 - Add single assembly canisters one-by-one by clicking the **Create Single Assembly Canister** button.

2. Review that the information specified in the tables below are correct.

 Ensure all data is submitted and correct.

Once you're sure this information is correct, we will move to **Schedule C.3.2: Uncanistered Fuel Rods/Pieces**.

 Take me back to Schedule C.3

 Take me to Schedule C.3.2

Fig. 3.33: Schedules C.3.1.1, C.3.1.2 and C.3.1.3 Single Assembly Canisters

If the user scrolls down from the screen shown in Fig. 3.33, they will be able to see all previously entered information within Schedules C.3.1.1, C.3.1.2 and C.3.1.3 similar to what is shown in Fig. 3.34. Clicking on the blue hyperlinks under “Canister ID” will allow the user to open up a form for editing information for each entry.

C.3.1.1 Single Assembly Canisters Description						
Canister ID	Canister Shape	Canister Dimensions (to the nearest 0.1 inch)			Load Weight (nearest lb)	Storage ID
		Length	Diameter/Width	Depth		
12	cuboid	1	1	1	1	Shedwood 1 and 2 pool

C.3.1.2 Qualitative Single Assembly Canister Contents						
For each canister identified in Schedule C.3.1.1, provide a qualitative description of the contents and identify the method used to close the canister. Also indicate whether the canister may be handled as a standard fuel assembly.						
Canister ID	Assembly with failed fuel	Reconstituted/reconstructed fuel assembly	Fuel rods	Fuel debris (rod pieces, fuel pellets, etc.).	Canister Closure	Is Canister Handled as a Standard Fuel Assembly
12	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	bolted	<input type="checkbox"/>

C.3.1.3 Detailed Single Assembly Canister Contents				
For each canister identified in Schedule C.3.1.1, provide a detailed description of the contents.				
Canister ID	Source Assembly Identifier	Number of Fuel Rod Equivalents from Assembly	Initial Heavy Metal Content (Initial kgU)	Discharge Burnup (MWDt/MTU)
12	A0	5	1	1
12	A0 W-edited	2	1	1

Fig. 3.34: Schedule C.3 Data

The user can navigate to the form for filling out information on a new single assembly canister by clicking on the “add single assembly canister” button shown on the bottom of Fig. 3.33. This will bring up a form similar to that in Fig. 3.35. Required parameters are shown with asterisks (*), if these are not entered an error message saying “please fill out this field” will be displayed upon submission of the data form.

+ **Create Single Assembly Canister** *for Braidwood*

Fig. 3.35: Schedule C.3 Form to Add Single Assembly Canister

Similar to entering assembly and cycle data, a Microsoft Excel (xlsx) file with this information can be uploaded by clicking on the blue “upload data” button. This will take the user to a screen where they can download the right format (order and names of columns, data format) for uploading the tabulated information. This process is the same as that which has been described for cycle and assembly data.

3.11 C.3.2 Special Fuel Form - Uncanistered Fuel Rods/Pieces

Proceeding next on the wizard will take a user to reporting of Uncanistered Fuel Rods and Fuel Rod Pieces. The landing page for schedule C.3.2 is again divided into two parts. The instructions are in the top part of the page as shown in Fig. 3.36.

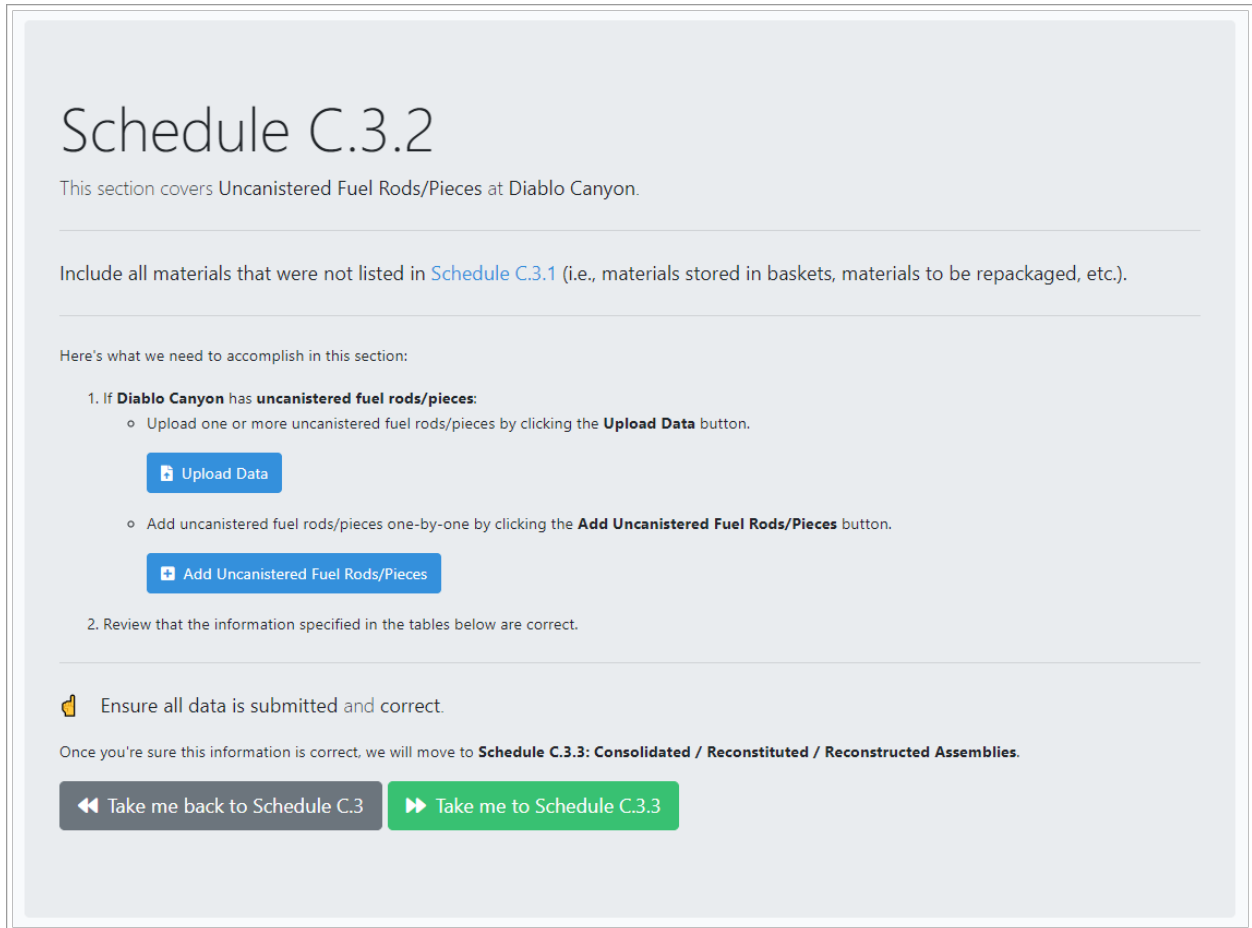

Fig. 3.36: Instructions for Schedule C.3.2

The bottom page provides the summary of current inventory as shown in Fig. 3.37.

C.3.2 Special Fuel Form - Uncanistered Fuel Rods/Pieces					
Assembly Source ID	Number of Uncanistered Fuel Rods or Pieces from Assembly	Initial Heavy Metal Content (Initial kgU)	Discharge burnup (MWDt/MTU)	Comments	Actions
A07	9	11.2	59800		Remove Designation
A13	2	3	50200		Remove Designation
A17	3	5	42200	Estimated Weight	Remove Designation
A27	7	10.8	65000		Remove Designation

Fig. 3.37: Inventory Summary for Schedule C.3.2

Users can enter data by uploading a list of inventory using the “Upload Data” button. Alternatively, users can add rods and pieces individually through a web form. The web form outlines the required data to be provided for each fuel rod or fuel rod piece as shown in Fig. 3.38.

+ Add Uncanistered Fuel Rod Pieces *for Diablo Canyon*

Assembly ID/Name *

Fuel Rod Count *

Initial Heavy Metal Content * initial kgU
The Initial Heavy Metal Content is calculated as the weight of only the number of fuel rod equivalents from assembly.

Discharge Burnup * MWd/MTU
Discharge Burnup of Source Assembly Identifier.

Comments

Fig. 3.38: Form to Enter a Single Fuel Rod or Fuel Rod Piece into Schedule C.3.2

For the “Data Upload” function, users need to prepare a Microsoft Excel (xlsx), or Comma Separated (csv), or tab separated (tab) file with the data from the form entered on one line per each fuel rod or each fuel rod piece as shown in Fig. 3.39. After that, the file upload function is similar to what was shown in Fig. 3.7 and Fig. 3.10. After a successful

upload, the system returns a message on how many entries were imported. Users can compare this number with a number of expected imported pieces or lines in the import file.

Fig. 3.39: Example Upload Form for Schedule C.3.2

3.12 C.3.3 Special Fuel Form - Consolidated/Reconstituted/Reconstructed Assemblies; Dimensionally or Other Than LWR Non-Standard Assemblies and Failed Fuel

Next, users will be asked if they have to report any Consolidated, Reconstituted, or Reconstructed Assemblies. This will take users to a landing page for schedule C.3.3.1 in Fig. 3.40.

Subsection C.3.3.1

This section covers Consolidated/Reconstituted/Reconstructed Assemblies at Diablo Canyon.

Here's what we need to accomplish in this section:

1. Add all **Consolidated / Reconstituted / Reconstructed Assemblies** for **Diablo Canyon** by clicking the **Add Assembly** or **Upload Data** button.

+ Add Assembly
📄 Upload Data

2. Ensure that the contents of the table below contain the correct information.

👉 Ensure all data is correct.

Once you're sure this information is correct, we will move to **Schedule C.3.3.2: Dimensionally or Other Than LWR Non-Standard Assemblies**.

⏪ Take me back to Schedule C.3.3
▶▶ Take me to Schedule C.3.3.2

Type	Current Location (Assembly ID)	Source Assembly ID	Number of Rods from Source Assembly (or other location)	Initial Heavy Metal Content (kgU)	Description of Assembly	Comments	Actions
Consolidated	EXAMPLE2	GG10	5	40.8	Description 3	<input style="width: 100%; height: 20px;" type="text"/>	🗑 Remove Designation
Reconstituted	EXAMPLE0	JJ79	9	41.9	Description 1	<input style="width: 100%; height: 20px;" type="text"/>	🗑 Remove Designation

Fig. 3.40: Landing page for schedule C.3.3.1

Users can enter data by uploading a list of inventory using the “Upload Data” button. Alternatively, users assemblies individually through a web form. The web form outlines the required data to be provided for assembly as shown in Fig. 3.41.

+ **Add Consolidated/Reconstituted/Reconstructed Assembly** for Diablo Canyon

Type *

Current Location Assembly Identifier and Source Assembly Identifier may only match if Type is Reconstructed.

Current Location Assembly Identifier *

Source Assembly Identifier *

Source Assembly Identifier must match the primary assembly identifier in Section C.1.1 of the current or prior data collection, whichever is applicable. If source assembly is not used (i.e. reconstituted with new rods), input type of rod used. Typical examples are Stainless Steel, Natural U-235, Enriched U-235, Inert Rod, or Water Rod.

Number of Rods from Source Assembly (or other location) *

Initial Heavy Metal Content * Initial kgU

The Initial Heavy Metal Content is calculated as the weight of only the number of fuel rods from source assembly.

Description of Assembly

Storage Location

Comments

Cancel
Submit

Fig. 3.41: Form to Assemblies into Schedule C.3.3.1

For the “Data Upload” function, users need to prepare a data file (xlsx, csv or tab) with the data from the form entered on one line per each assembly as shown in Fig. 3.42. After that, the file upload function is similar to what was shown in Fig. 3.7 and Fig. 3.10. After a successful upload, the system returns a message on how many entries were imported. Users can compare this number with a number of expected imported assemblies or lines in the import file.

Consolidated Type	Current Location Assembly Identifier	Source Assembly Identifier	Source Assembly Contributing Reactor	Number of Rods from Source Assembly (or other location)	Initial Heavy Metal Content (kgU)	Description of Assembly	Storage Location	Comments
Reconstituted	EXAMPLE0	JJ79	Diablo Canyon 1	9	41.9	Description 1	Diablo Canyon 2 pool	
Reconstructed	EXAMPLE1	V88H	Diablo Canyon 2	10	58.9	Description 2	Diablo Canyon ISFSI	
Consolidated	EXAMPLE2	GG10	Diablo Canyon 1	5	40.8	Description 3	Diablo Canyon ISFSI	
Reconstituted	EXAMPLE3	Z36	Diablo Canyon 2	7	42.7	Description 4	Diablo Canyon ISFSI	
Consolidated	EXAMPLE4	T25	Diablo Canyon 2	5	16.6	Description 5	Diablo Canyon 1 pool	

Fig. 3.42: Example Upload Form for Schedule C.3.3.1

Dimensionally or Other Than LWR Non-Standard Assemblies are covered in schedule C.3.3.2. The approach to add and review non-standard assemblies is similar to description in schedule C.3.3.1. A single assembly form entry has three entries: Assembly Identifier, Contributing Reactor and a Description field. Similarly if users opt for the “Upload Data” approach, the xls/csv/tab import file must have three columns with the same headings. Each line of xls/csv/tab file will contain information for a single assembly. The file upload function is similar to what was shown in Fig. 3.7 and Fig. 3.10. After a successful upload, the system returns a message on how many entries were imported. Users can compare this number with a number of expected imported assemblies or with the number of lines in the import file.

3.13 Schedule C.4: Potential High-Level Waste

Schedule C.4 covers potential high-level waste. If the user completes Section C.3 or navigates to Section C.4 using other means, they will see a screen similar to that in Fig. 3.43. This figure shows what the screen would look like once the user clicks on the “yes” button which will reveal the blue buttons at the bottom of the screen. These are the “Add High Level Waste” and “Upload Data.” Clicking the “Add High Level Waste” button will take the user to a form for entering the data. Clicking the “Upload Data” button will take the user to a screen where the user can download a Microsoft Excel (xlsx) file with the format acceptable for uploading this data. After completing the Microsoft Excel (xlsx/csv/tab) file they can click the green “Get Started” button which will take them to the page where the xls/csv/tab file can be uploaded.

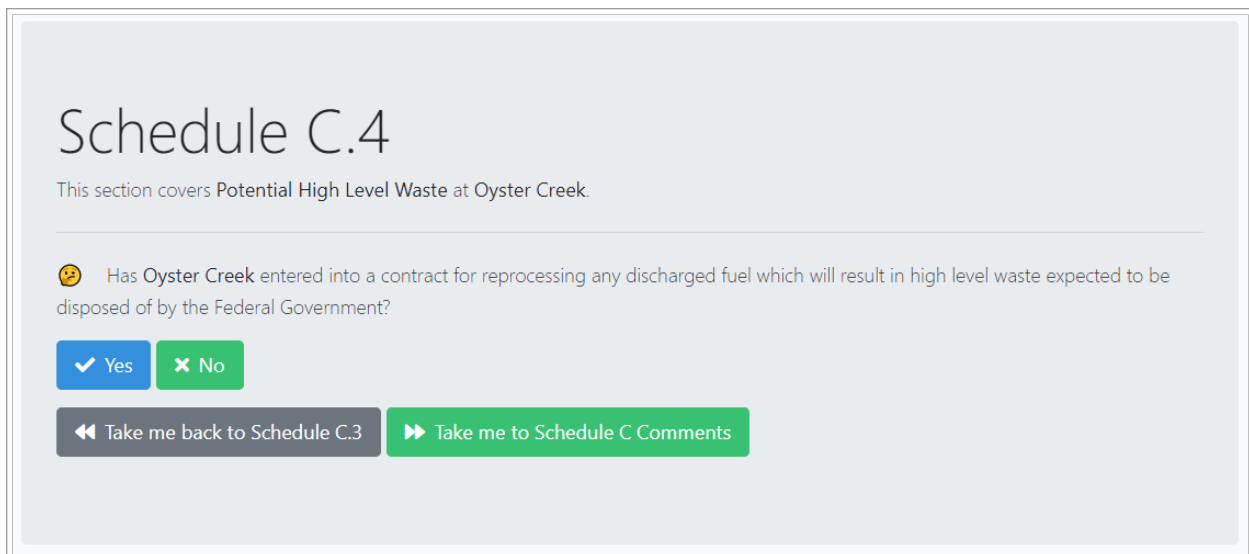

Fig. 3.43: Schedule C.4 Potential High-Level Waste

3.14 Schedule C Comments

Finally, user can proceed to the comment section using the button “Take me to Schedule C Comments” shown above in Fig. 3.43. Users provide any comments concerning Fuel Data (Section C.1 through C.4) and should label comments by the Schedule and Item Number to which they refer. To enter and edit comments, users click the “Edit Comments” button in Fig. 3.44. After completing comments proceed to Schedule D.

Fig. 3.44: Schedule C Comments

SCHEDULE D: STORAGE FACILITY DATA

When Schedule C is complete or the user navigates to Schedule D, they will see a screen similar to that in Fig. 4.1. The information at the bottom of Fig. 4.1 shows the number of canisters added for the survey year. If the user clicks on the “Take me to Schedule D.1.0” in Fig. 4.1 they will be asked to review and verify points of contact. This information was entered in Schedule A.

Schedule D

This section covers Storage Facility Data at Callaway.

The counters below show a high-level summary of what's included in the base data, and how much information you've provided.

Next, we will move to **Schedule D.1: Point of Contact**.

◀ Take me back to Schedule C Comments ▶ Take me to Schedule D.1

ISFSI	Canisters added for 2023 survey year [D.3.2]	Canisters from base data	Total
Callaway ISFSI		6	6
Total	0	6	6

Fig. 4.1: Schedule D Storage Facility Data Front Screen

4.1 Schedule D.2 Storage Facility Information Pool Storage

When the user has completed Schedule D.1 or has navigated to Schedule D.2 using other means such as clicking on the green “My GC-859” button at the top of the screen (see Fig. 1), they will see a screen similar to that in Fig. 4.2 that will them to enter pool storage information.

Schedule D.2 (D.2.1, D.2.2, & D.2.3)

This section covers the Storage Facility Information (Pool Storage) at Callaway.

Here's what we need to accomplish in this section:

1. Section D.2.1: **Storage Site Identifier** should be **pre-filled** based on historic data. **You must verify that this information is still correct.** If you find incorrect data, you need to contact an administrator to modify your facility's base data.
2. Section D.2.2: **Storage Capacity** should be **pre-filled** based on historic data. **You must verify that this information is still correct.** If you find incorrect data, you can change the storage the licensed capacity by clicking on the appropriate button below.
 - [Edit Storage Capacity for Callaway pool](#)
3. Section D.2.3: **Storage Inventory** should be **pre-filled** based on data provided in [Schedule C](#).

This section is auto-generated based on historic data and should be reviewed for consistency.

Once you're sure this information is correct, we will move to **D.3: Storage Facility Information (Dry Storage)**.

[◀ Take me back to Schedule D.1](#) [▶ Take me to Schedule D.3](#)

Fig. 4.2: Schedule D.2 Storage Facility Information Pool Storage

Hyperlinks in blue text in Sections 1 and 2 of Fig. 4.2 will scroll the user to the summary information located at the bottom of the page. Summary information in Schedule D.2 includes the storage capacity of each pool at the facility and the number of assemblies stored in each pool. An example is shown in Fig. 4.3. Information in Section 2 can be changed by clicking on the hyperlinks “Edit Storage Capacity .” The information in Section 3 of Fig. 4.2 is pool storage inventory and is pre-generated based on the information entered in Schedule C. If the user wishes to modify the data in Section 3, they will have to go back to the data entry for Schedule C.

D.2.1 Storage Site Identifier				
Storage Site Identifier	EIA Number			
Diablo Canyon 1 pool	3501			
Diablo Canyon 2 pool	3502

Current Installed Storage Capacity	Diablo Canyon 1 pool	0	132	<input type="text"/>
Current NRC Licensed Storage Capacity	Diablo Canyon 2 pool	0	1324	<input type="text"/>
Current Installed Storage Capacity	Diablo Canyon 2 pool	0	132	<input type="text"/>

D.2.3 Storage Inventory		
Contributing Reactor Name	Pool	Number of Assemblies
Diablo Canyon 1	Diablo Canyon 1 pool	88
Diablo Canyon 2	Diablo Canyon 2 pool	84
Diablo Canyon 1	Diablo Canyon 2 pool	
Total Storage Site Inventory		172

Fig. 4.3: Schedule D.2 Data

4.2 Schedule D.3 Storage Facility Information Dry Storage

When the user has completed reviewing the information in Schedule D.2 they can click on the green “take me to Schedule D.3” button to continue on to Schedule D.3 or navigate to Schedule D.3 using other means previously mentioned. When beginning Schedule D.3 the user will see a screen similar to the one in Fig. 4.4. The Schedule D.3 form allows the user to enter information related to dry storage canisters located at a facility. The form in Fig. 4.4 allows users to perform the following actions:

1. Add canister models and input the coordinate system that provides the orientation of fuel assemblies loaded in the canister relative to the drain tube. This function is designed aid the user when importing canister loading maps in Schedule D.3.3.

2. Add data for individual canisters.
3. Add reference PDFs canister loading maps that can be associated with canisters.

Since last reporting data, many facilities have begun loading new canisters designs. To check the designs that have been reported in previous surveys and add new ones the user can click the blue “Manage Canister Models” button at the top of the form shown in Fig. 4.4 or click the “See Canister Models” button under the Quick Tasks section of the form. Selecting either of these options will take user to a screen similar to Fig. 4.5. Once in this form the user has the option to add new canister designs by clicking the “Add Unlisted Canister” in the upper left corner or modify the coordinate system of canister designs by clicking the “Edit Position Labels” button in the bottom right corner.

If the user adds a canister design, they will be taken to a menu to select available designs. If a design is not available, the user should contact the admin using the message app and the admin can add the new design using administrative tools. If the user elects to modify the canister coordinate system to match the scheme used at their site, they will be taken to a screen similar to Fig. 4.6. These position labels will need to be consistent with those that are entered in the cask loading map data file shown in Fig. 4.16 under the Schedule D.3.3 form. The orientation of the loading map can be determined based on the location of the drain tube. It was observed that few utilities previously provided both drain tube and a north-south direction indicator. User can rotate a canister to indicate proper orientation and also adjust the north-south direction as needed to indicate the direction of the drain tube or a cell position on the storage pad. The numbering scheme, orientation, and directions are site specific and need to be specified for each site if different. These features are optional.

Schedule D.3 (D.3.1 & D.3.2)

This section covers the Storage Facility Information (Dry Storage) and Multi-Assembly Canisters/Casks at Diablo Canyon.

Here's what we need to accomplish in this section:

1. Section D.3.1: **Storage Site Identifier** should be **pre-filled** based on historic data. **You must verify that this information is still correct.** If you find incorrect data, you need to contact an administrator to modify your facility's base data.
2. Section D.3.2: **Multi-Assembly Canisters/Casks Inventory (Dry Storage)** should be **pre-filled** with historic data. **You must verify the existing data, and add new data since the last survey collection.**
3. **Tell us about your canister loading map numbering scheme.** Click the **Manage Canister Models** button to ensure your position numbering scheme matches what you use in your facility.

For each canister model used at Diablo Canyon listed on the **Manage Canister Models** page, click the **Edit Position Labels** button to provide your position labels.

[→ Manage Canister Models](#)

4. **For each canister/cask model,** provide and/or reference a loading map that clearly indicates identifiers for basket cell locations relative to fixed drain and vent port locations. For systems stored horizontally, map should indicate which direction is "up" when placed in horizontal storage module. Map reference should cite page number and figure number from either the Certificate of Compliance (CoC), a completed plant procedure, or Final Safety Analysis Report (FSAR). Provided maps should be in the form of a pdf file.

Use the **Quick Tasks** section below to **add or update your data.**

- You can prepare a CSV file (or, in some cases, upload your native formats) to upload multiple canisters at once. Click the **Upload Data** button to import your data.

[Upload Data](#)

- To add canisters one-by-one via the web interface, see the **Create Single Canister** quick task.
- Upload your PDF files by using the **Upload Canister Loading Maps** quick task. A gray area will appear where you can drag-and-drop your PDF files, or you can click inside the gray **Upload Canister Map PDF** area to browse for files on your computer.

5. After uploading your data, use the **Canister Loading Maps** section to **associate canisters with loading maps.**

 **Ensure all data is correct.**

Once you're sure this information is correct, we will move to **Schedule D.3.3: Assemblies in Dry Storage.**

[◀ Take me back to Schedule D.2](#) [▶▶ Take me to Schedule D.3.3](#)

Fig. 4.5: Schedule D.3 Canister Models

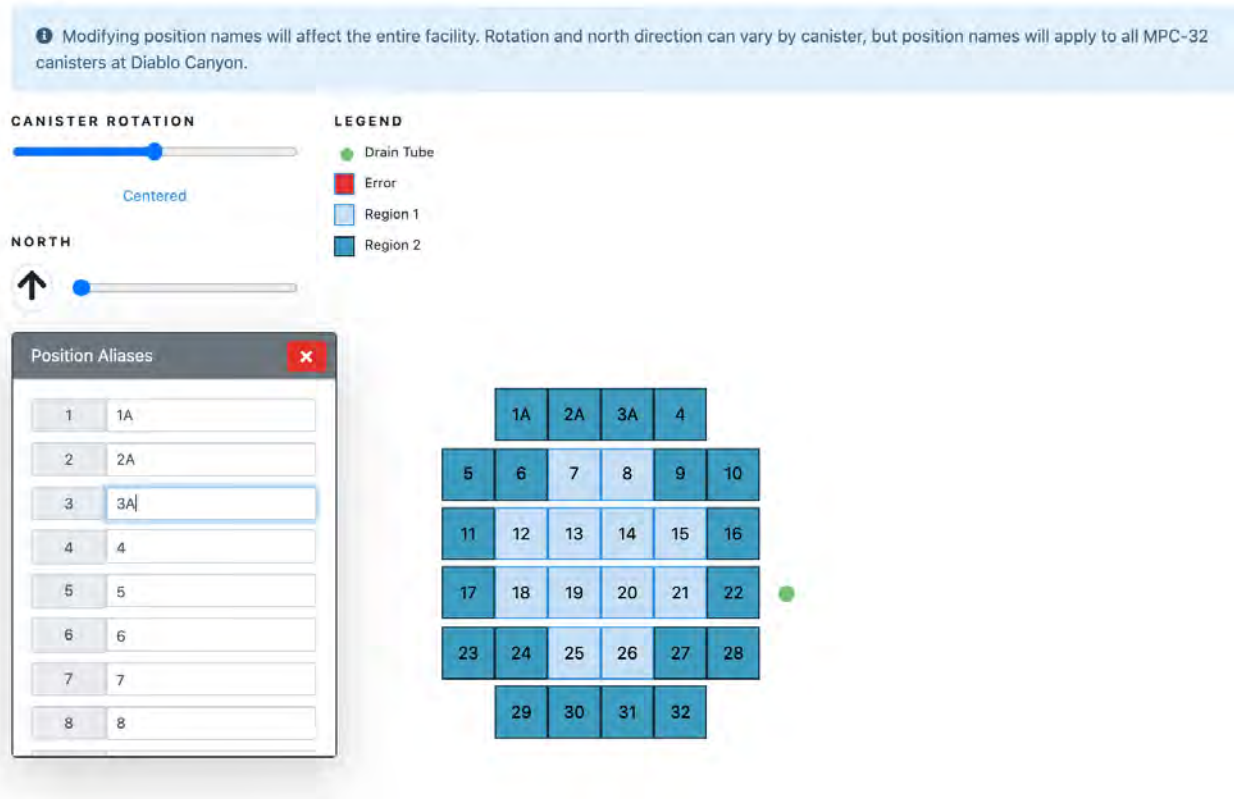

Fig. 4.6: Schedule D.3 Assign Positions to Canister Models

The user has two options for adding new canisters, adding a single canister in a web form or uploading a Microsoft Excel (xlsx), or Comma Separated (csv), or tab separated (tab) file with one or more canisters. If the user would like to upload data for a single new canister, they can click on the blue “Add Dry Storage Container” button located under the “Create Single Canister” section of the “Quick Tasks” section shown in Fig. 4.4. This will open up a form similar Fig. 4.7. Once in the canister addition form, the “Vendor/Model Number” of the cask from the drop-down menu will display a graphic of the canister below the data form for some cask models. Not all cask models will have a corresponding loading map graphic shown in Fig. 4.6 that appears below the form in Fig. 4.7. If a user is adding a new canister and there is no layout available and they wish to have one added, they need to contact an administrator.

As an alternative to entering data for each storage system with the web form, users may upload a Microsoft Excel (xlsx), or Comma Separated (csv), or tab separated (tab) file, which may be more convenient if there are multiple canisters that need to be entered. One way to begin the process of uploading a file with canisters is to click on the blue “Get Started” button in the Upload Canister Data section of the “Quick Tasks” section of the screen shown in Fig. 4.4. This will take the user to the upload screen that will be similar to Fig. 4.8. Once at the file upload screen, the user has the option of downloading Microsoft Excel (xlsx) files with either sample data or previous facility data, by clicking the gray drop-down menu. An example of the Microsoft Excel (xlsx) file format provided is shown in Fig. 4.9. Clicking the “Download Data for Editing” will download a Microsoft Excel (xlsx) file that can be modified or appended to make changes to existing data or add new data. After adding new data users can proceed to the upload screen by clicking “Get Started.”

Fig. 4.9: Schedule D.3 Upload Canister Data Format

After clicking on the “Get Started” button shown in the user will be able to upload a file by either dragging the file into the window or navigating to the file location by clicking on the “choose file” button below the blue “drag-and-drop your files here” space. The system does some data checking and if canister or overpack models are not recognized will show the message on the right in Fig. 4.10 giving the user the option to select from known canister or overpack models. If the file has been uploaded correctly and all data checking has been completed and corrected, the user will receive a message showing that the file has been successfully uploaded similar to that in Fig. 4.11.

Fig. 4.10: Schedule D.3 File Upload and Data Checking

Fig. 4.11: Schedule D.3 Successful File Upload

A third function of the Schedule D.3 form is to permit users to upload loading map PDFs that can be referenced in other Schedule D forms. To upload the reference PDFs the user should click on the “Show/Hide PDF Upload” button in the “Upload Canister Loading Map Reference” section under Quick Tasks in the main D.3 form (Fig. 4.4). Selecting this option will expand this form to allow the user to drag and drop files or open a navigation window to select them. These reference PDFs can be selected from “Map Filename” portion of the single canister form (Fig. 4.7) and portions of the document can be referred to in the “Map Reference” field in Fig. 4.7 or in Column E in of the multiple canister upload file shown in Fig. 4.9. This “map reference” can be used to state a specific page and figure number when a single file is used to describe loading maps for multiple canisters. An example of this is shown in Column E of Fig. 4.9 that states the page and a figure number. This file may be used to describe loading maps for multiple canisters and can be used as a reference for data in Schedule D.3.3.

Clicking on the blue “Show/Hide PDF Upload” button on the main Schedule D.3 page as shown on the right of Fig. 4.4 will navigate user to the lower part of the Schedule D.3 page where they have access to canister loading map files by clicking on the hyperlinks. As shown in Fig. 4.12, clicking on the file name shows a drop-down menu with options to view and download the loading map files, as well as show and modify linked canisters.

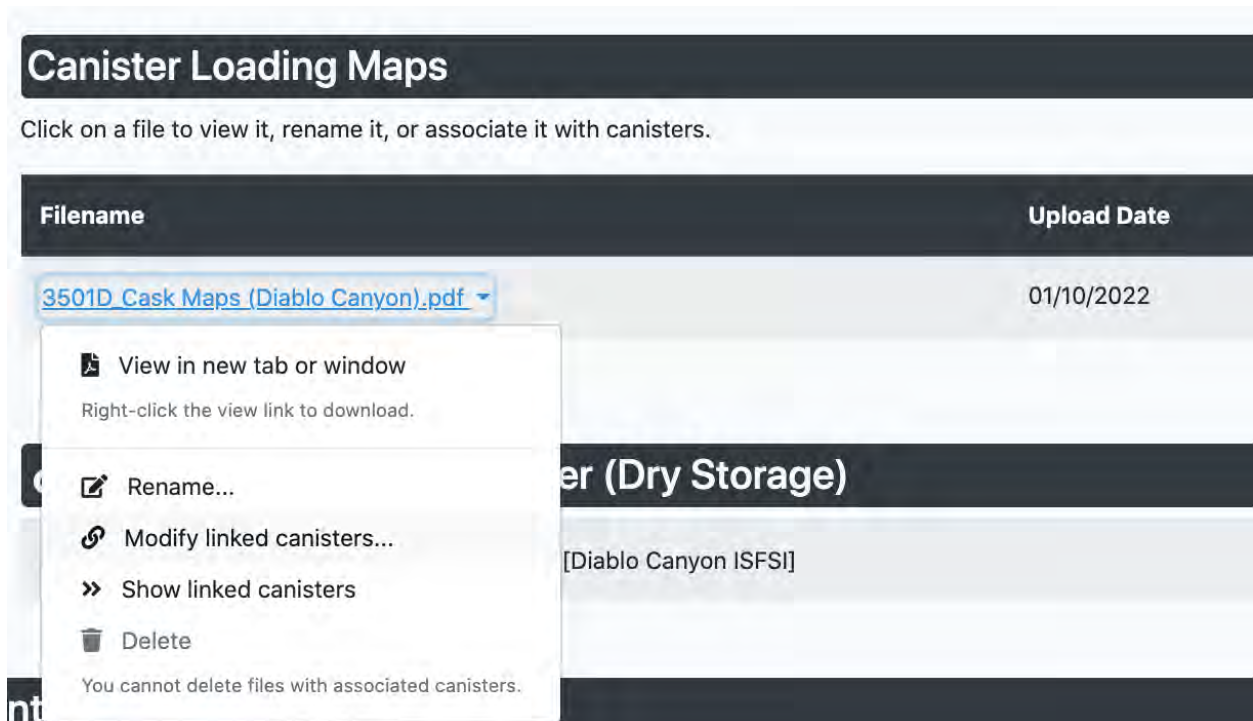

Fig. 4.12: Schedule D.3 Canister Loading Map File Options

Once the user has completed uploading canister information, canister loading information may be reported in Schedule D.3.3. Schedule D.3.3 can be accessed by clicking on the “Take me to Schedule D.3.3” which will be a green button on the screen shown in Fig. 4.4 or by navigating to Schedule D.3.3 using other means. The screen for Schedule D.3.3 will look similar to that in Fig. 4.13.

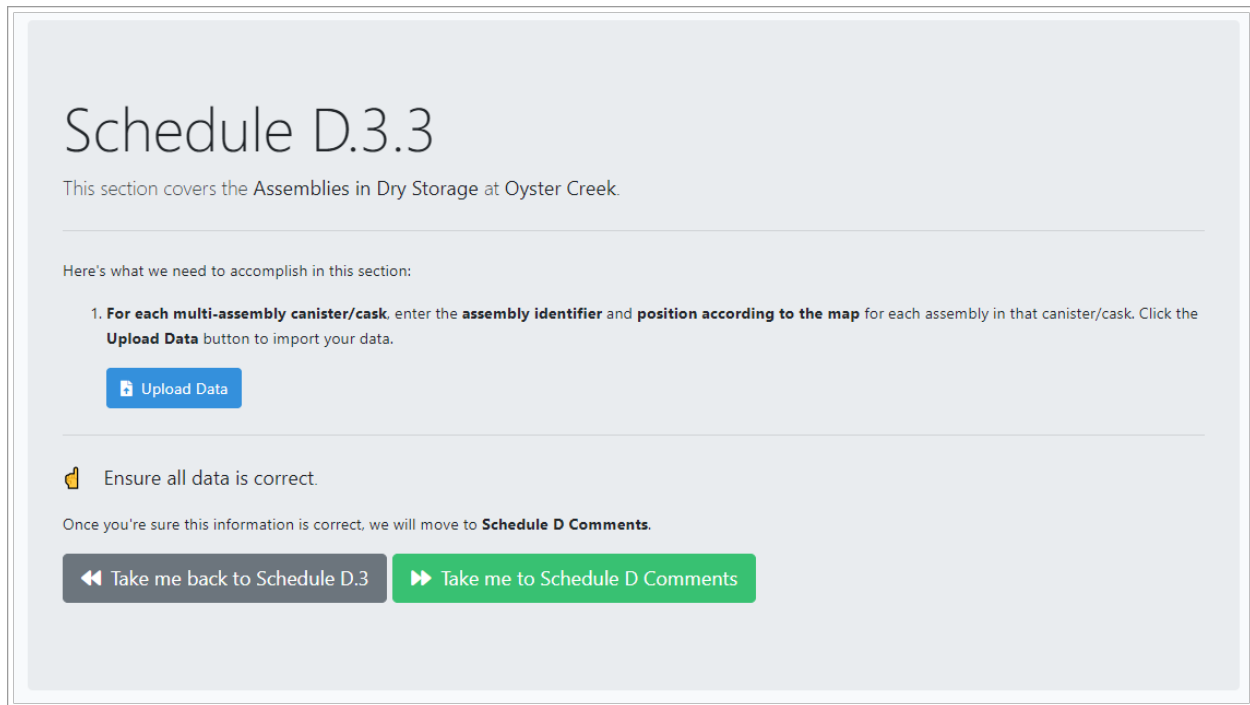

Fig. 4.13: Schedule D.3.3 Front Screen

If the user scrolls down from the screen shown in Fig. 4.13 they will see all previously uploaded canister maps with positions and assemblies assigned to these positions similar to Fig. 4.14. The assembly identifiers are hyperlinked to the assembly information provided in Schedule C and the canister identifiers are also hyperlinked to the canister information provided in Schedule D 3.2. To create new canister assignments for assemblies the user can click on the blue “Upload Data” shown in Fig. 4.13. This will take the user to a file upload screen shown in Fig. 4.15.

Canister loading map data will be uploaded from an input data file. The format for the input file can be downloaded by clicking the gray button with an arrow shown on Fig. 4.15 which will result in a drop-down menu with two options. If the user clicks on “Download Sample,” they will download a file that shows the acceptable format of the upload data file in a Microsoft Excel (xlsx) file format. The data in this file is only used to provide an example of the format. If the user clicks on “Download Data for Editing,” they will get previously entered data that they can edit or append. An example of this format is shown in Fig. 4.16. Once the user has created the upload file with the canister loading map they wish to upload they can access the file upload screen by clicking on the green “Get Started” button at the bottom of Fig. 4.15. After a file has been uploaded the user will see a screen similar to that in Fig. 4.17. The successfully uploaded file will appear under “uploaded files,” on the lower left of Fig. 4.17. In this example, the name of the file was “Diablo Canyon Canister Map Data Example - 2022.xlsx”. Additional files can be uploaded by repeating the process of either dragging and dropping the files into the space shown in Fig. 4.17, or by navigating to the file location and selecting the file the user wishes to upload. When all files have been uploaded the user can click the “Finished Uploading” button and this will take them to the screen shown in Fig. 4.18. Besides a Microsoft Excel (xlsx) file format, users can use Comma Separated (csv) or tab separated (tab) file formats for data upload. The downloaded examples are always in Microsoft Excel (xlsx) file format.

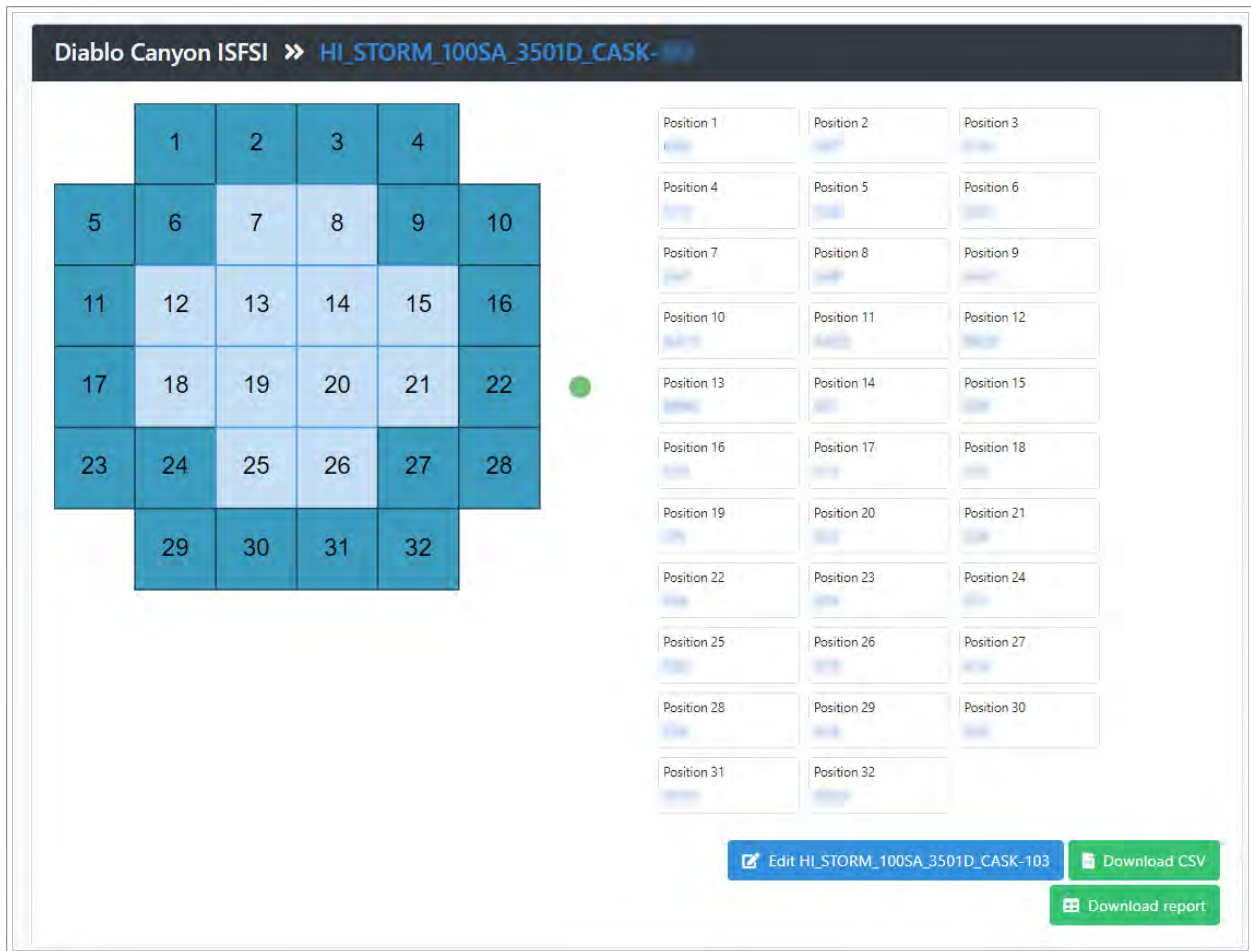

Fig. 4.14: Schedule D.3.3 Example of Canister Loading Maps

File upload

Upload your facility data to automate the completion of the GC-859 form

We support the following file formats for **Diablo Canyon**:

 **Built-in Canister Loading Map File**

A built-in format for importing the loading map of multi-assembly canisters. Relates to Schedule D.3.3.

Supports: Microsoft Excel, CSV, Tab-delimited

To start uploading data, click *Get Started*.

Fig. 4.19: Schedule D.3.3 File Upload for Constellation Facilities

The process for downloading and entering the data into the correct format is similar to that previously discussed, however there is an additional data file format available for Southern Nuclear and Constellation facilities. The files for using this option are accessible by clicking the gray drop-down box “Download Sample” shown in Fig. 4.19. In Fig. 4.20 an example of the file format is shown for Southern Nuclear Facilities. The file format has three columns: a unique canister name, a unique assembly identifier from Schedule C.1.1 and a position where the assembly is located in the

spent fuel basket.

Unique Canister/Cask Identifier	Assembly Identifier	Position According to Map

Fig. 4.21: Schedule D.3.3 Example of TracWorks File Format Constellation Facilities

Some of the data in the TracWorks format will need to be translated in order to be recognizable by the GC-859 survey web program. The program will check the data and send the user through automated steps where it will predict the data that is compatible with the database. The user will then be asked to confirm the predictions. After uploading the data file, the program asks the user a series of question to link the unknown columns to data in the GC-859 database. This process is similar to discussion under Fig. 3.19.

4.4 Schedule D Comments

Finally, user can proceed to the comment section using the button “Take me to Schedule D Comments” shown above in Fig. 4.13. Users provide any comments concerning Storage Facility Data (Section D.1 through D.3) and should label comments by the Schedule and Item Number to which they refer. To enter and edit comments, users click the “Edit Comments” button in Fig. 4.22. After completing comments proceed to Schedule E.

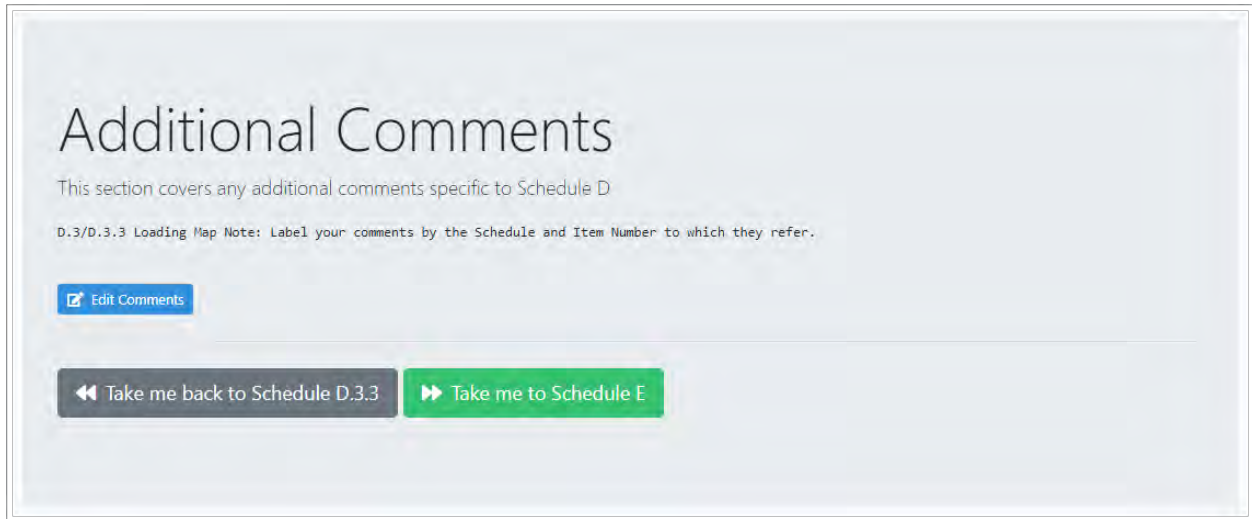

Fig. 4.22: Schedule D Comments

SCHEDULE E: NON-FUEL DATA

After clicking on the “Take Me to Schedule E” or navigating to Schedule E using other means, users will be directed to a screen similar to Fig. 5.1. To proceed, click on the green “Take me to Schedule E.2” button displayed in Fig. 5.1. This will lead users to the screen shown in Fig. 5.2.

Schedule E

This section covers Non-Fuel Data for Haddam Neck.

Non-fuel components are defined in the Standard Contract, as including, but not limited to, burnable poison rod assemblies, control rod elements, thimble plugs, fission chambers, and primary and secondary neutron sources, that are contained within the fuel assembly, or BWR channels that are an integral part of the fuel assembly, which do not require special handling and may be included as part of the spent nuclear fuel. Note: Fuel that does not meet these specifications shall be classified as non-standard fuel.

☺ Does Haddam Neck have any non-fuel components that may be delivered to a DOE facility?

- All materials not listed in [Schedule C.3](#), Special Fuel Forms, should be included here. Non-fuel components may be integral to an assembly (enter data in [Schedule C.1.1](#)), canistered (enter data in [Schedule E.3](#)), or separate from an assembly and uncanistered in the storage pool (enter data in [Schedule E.4](#)).

✓ Yes ✗ No

Fig. 5.1: Schedule E Non-Fuel Data Front Screen

Schedule E.2 serves as a placeholder for consistency with prior surveys. This data is reported in C.1.1 (Fig. 3.3) columns 10, 11, and 12. For non-fuel components (NFCs) which have been moved during the current reporting period to or from an assembly identified as being discharged in a previous reporting period, NFC-related information for the affected assembly or assemblies can be updated in schedule C.1.1 using an edit window similar to Fig. 3.5 or upload feature in Fig. 3.7.

Schedule E.2

This section covers Non-fuel Components - Integral to an Assembly for Beaver Valley.

i This data is now merged with [Schedule C.1.1](#).

- This data is reported in [C.1.1](#) columns 10, 11, and 12. E.2 is no longer used, and is kept as a place holder for consistency with prior surveys. If reporting this data in [C.1.1](#) instead of E.2 is a large burden to the respondent, please contact PNNL.
- For non-fuel components (NFCs) which have been moved during the current reporting period to or from an assembly identified as being discharged in a previous reporting period, NFC-related information for the affected assembly or assemblies can be updated in [schedule C.1.1](#). Please contact PNNL for any assistance.

Next, we will move to **E.3: Non-fuel Components - Canistered**.

[◀ Take me back to Schedule E](#) [▶ Take me to Schedule E.3](#)

Fig. 5.2: Schedule E.2 Non-Fuel Components Integral to an Assembly

Clicking on the green “Take me to Schedule E.3” button shown in [Fig. 5.2](#) will lead the user to Schedule E.3 which is shown in [Fig. 5.3](#). Schedule E.3 is where the user can report canistered non-fuel components. If the user has canistered non-fuel components to enter, they will click on the blue “Yes” button shown below in [Fig. 5.3](#) and the bottom of the screen containing the two blue buttons, “Add Canistered Non-fuel Component,” and “Upload Data” will be displayed.

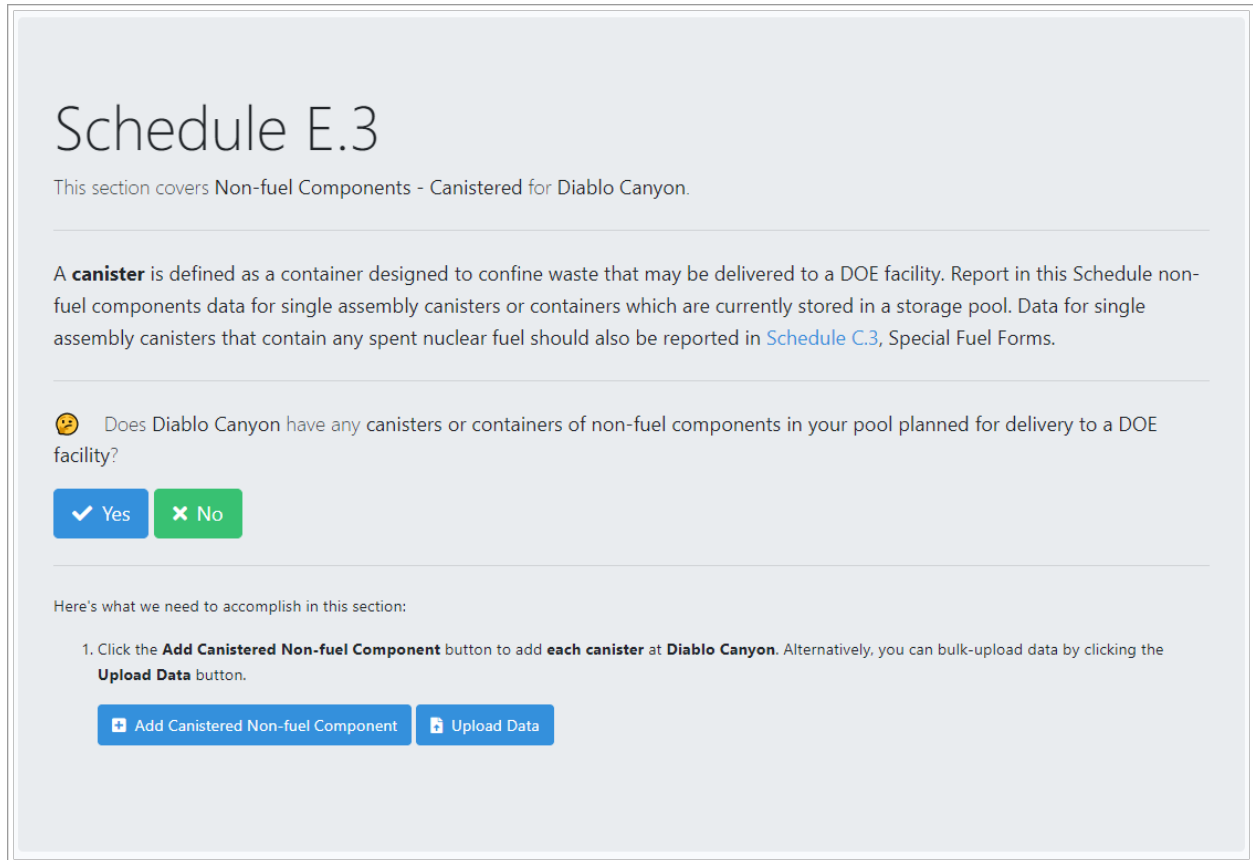

Fig. 5.3: Schedule E.3 Canistered Non-Fuel Components Front Screen

Clicking on the “Add Canistered Non-fuel Component” button shown in Fig. 5.3 will take the user to a form shown in Fig. 5.4 that can be filled out to enter information about the canistered non-fuel component.

Fig. 5.4: Schedule E.3 Canistered Non-fuel Component Entry Form

After the user completes the form and hits the blue “submit” button at the bottom of the form shown in Fig. 5.4 they will be taken back to the Schedule E.3 screen shown in Fig. 5.3.

If the user wishes to use the file data import format, they can click the blue “Upload Data” button shown on the bottom of Fig. 5.3. This will take the user to a file upload screen shown in Fig. 5.5. Clicking on the gray down arrow button will open a drop-down menu provides two options, “Download Sample,” and “Download Data for Editing” and similar to that process, clicking on “Download Sample” will download a Microsoft Excel (xlsx) file that has example data with the correct format, while “Download Data for Editing” will bring up a Microsoft Excel (xlsx) file that has previously entered data so that new data will need to be appended, and previously entered data can be modified if errors are found.

Once the user has completed the file with the correct format for uploading, they can click on the green “get started” button shown at the bottom of Fig. 5.5. The user can upload files by either dragging and dropping the files onto the “Drag-and-drop your files here” space shown on the file upload screen or by clicking the “choose files” button and navigating to the file location and selecting the file the user wishes to upload. Note that the upload also supports a Comma Separated (csv) or a tab separated (tab) file in addition to Excel files.

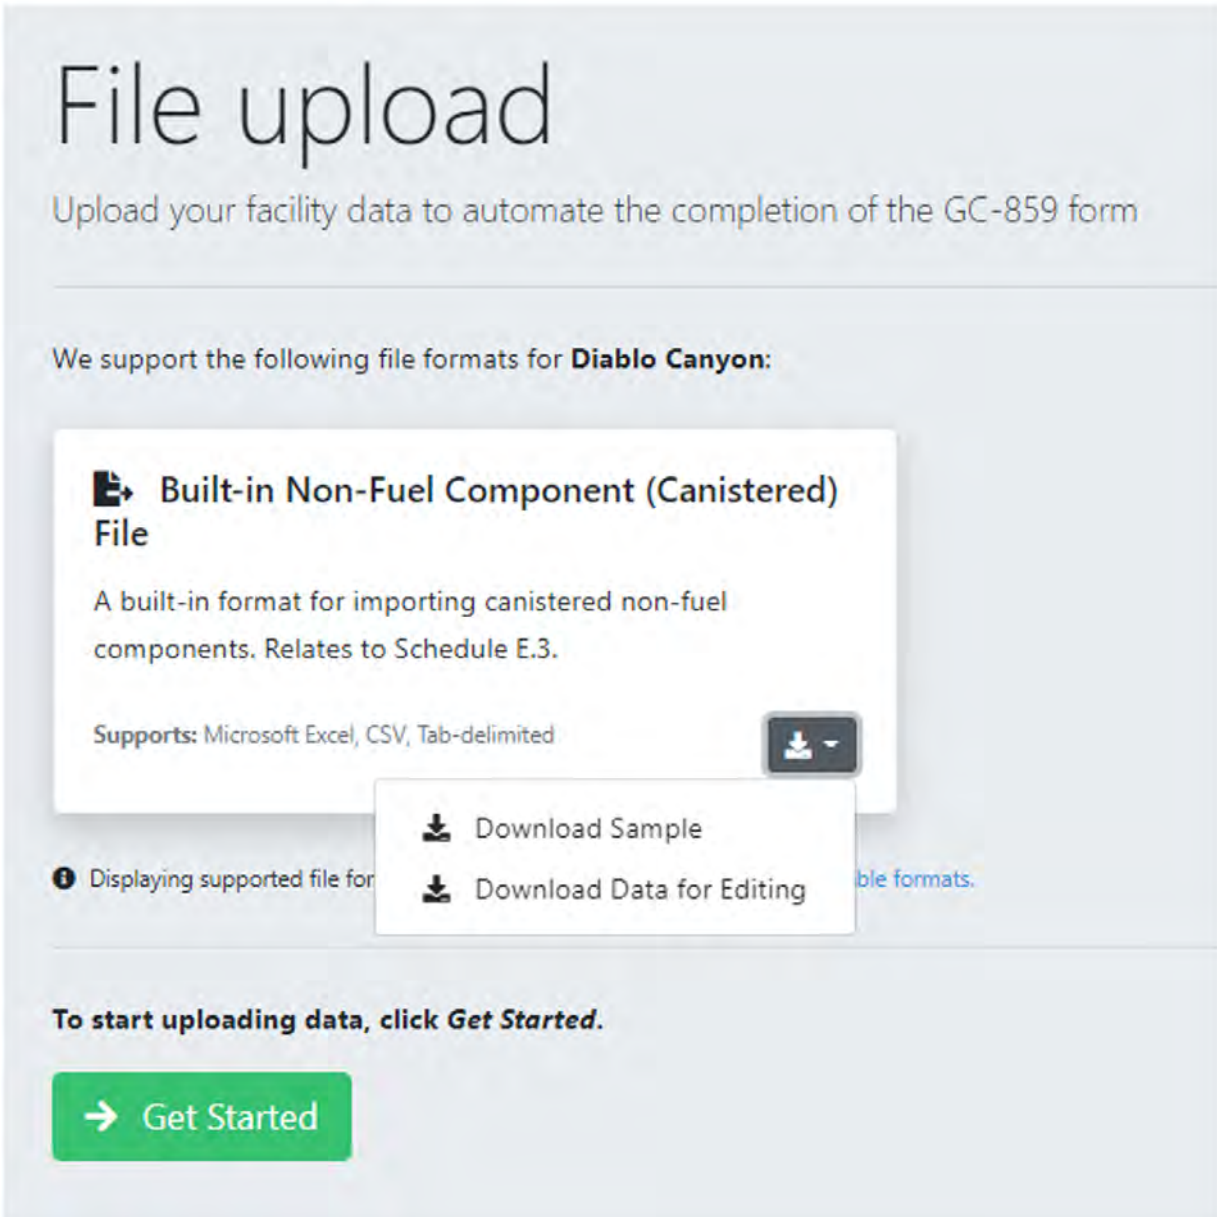

Fig. 5.5: Schedule E.3 File Upload for Canistered Non-fuel Components

Once the user has entered the canistered non-fuel components and returned to the screen shown in Fig. 5.3, they will be able to scroll down from this screen and see all the canistered non-fuel components that have been entered and can verify any new data that has just been entered.

When the user has finished entering all canistered non-fuel data and has returned to the screen shown in Fig. 5.3, they can enter Schedule E.4 by clicking on the green “Take me to Schedule E.4” button. This is not shown in Fig. 5.3 but would be below what is shown there. Alternatively, they can navigate to Schedule E.4 using other means such as clicking the green “My GC-859” button at the top of the screen (see Fig. 1).

Schedule E.4 is for non-fuel components separated from an assembly and uncanistered. Upon entering Schedule E.4 the user will see a screen similar to that shown in Fig. 5.6.

If the user needs to enter information into Schedule E.4 there are two methods for doing so, they can click on the blue

“Add Uncanistered Non-fuel Component” button shown on the left in Fig. 5.6 which will bring up a form to fill out or they can click on the blue “Upload Data” button on the right in Fig. 5.6 which will navigate the user to a file upload page where they can download a a Microsoft Excel (xlsx) file file that contains the allowable format as well as a link for uploading the a Microsoft Excel (xlsx)file file once it’s complete.

Schedule E.4

This section covers Non-fuel Components - Separate from an Assembly and Uncanistered for Diablo Canyon.

Here's what we need to accomplish in this section:

1. Click the **Add Uncanistered Non-fuel Component** button to add **each uncanistered non-fuel component** at **Diablo Canyon**. Alternatively, you can bulk-upload data by clicking the **Upload Data** button.

+ Add Uncanistered Non-fuel Component
📄 Upload Data

2. Review that the information specified in the tables below are correct.

👉 Ensure all data is correct.

Once you're sure this information is correct, we will move to **Schedule E Comments**.

⏪ Take me back to Schedule E.3
▶▶ Take me to Schedule E Comments

Fig. 5.6: Schedule E.4 Non-Fuel Components Separate from a Fuel Assembly and Uncanistered Front Screen

5.1 Schedule E Comments

Finally, user will be directed to the comment section for Schedule E. Users provide any comments concerning Non-Fuel Data (Section E.1 through E.4). Users should label comments by the Schedule and Item Number to which they refer. To enter and edit comments, users click the “Edit Comments” button in Fig. 5.7. After completing comments proceed to Schedule F.

Fig. 5.7: Schedule E Comments

SCHEDULE F GREATER-THAN-CLASS C WASTE DATA

When the user has completed entering data into Schedule E, they can navigate to Schedule F by clicking on the green “Take me to Schedule F” button shown in Fig. 5.7 or by navigating to Schedule F using other means such as clicking on the green “My GC-859” button near the top of the page (see Fig. 1). Upon entering Schedule F the user will see a page similar to Fig. 6.1. If the reactor does not have any previously entered Schedule F data the user may see a screen similar to Fig. 6.2.

Schedule F
This section covers Greater-Than-Class-C Waste Data for Diablo Canyon.

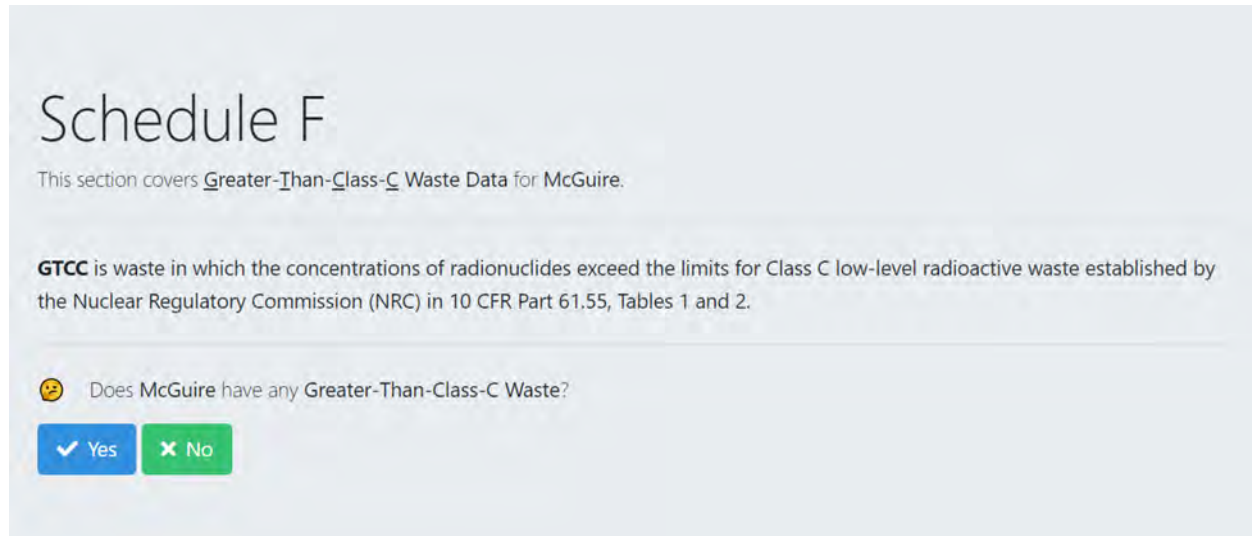

GTCC is waste in which the concentrations of radionuclides exceed the limits for Class C low-level radioactive waste established by the Nuclear Regulatory Commission (NRC) in 10 CFR Part 61.55, Tables 1 and 2.

[▶ Take me to Schedule F.1](#)

Reactor	Activated Metals [F.2.1]
Diablo Canyon 1	0
Diablo Canyon 2	0

Storage Location	Process Waste/Other Waste [F.2.2]	Projected Activated Metals [F.3.1]	Projected Process Waste/Other Waste [F.3.2]
Diablo Canyon 1 pool	0	0	1
Diablo Canyon 2 pool	0	0	3
Diablo Canyon ISFSI	0	0	1

Fig. 6.1: Schedule F Greater-than-Class-C Waste Data Front Screen

Schedule F

This section covers Greater-Than-Class-C Waste Data for McGuire.

GTCC is waste in which the concentrations of radionuclides exceed the limits for Class C low-level radioactive waste established by the Nuclear Regulatory Commission (NRC) in 10 CFR Part 61.55, Tables 1 and 2.

☺ Does McGuire have any Greater-Than-Class-C Waste?

✓ Yes ✗ No

Fig. 6.2: Schedule F Greater-than-Class-C Waste Data Alternate Front Screen

Navigating to Schedule F.1 will take the user to a screen to verify the point of contact information for GTCC waste. The user can get to Schedule F.2 by either clicking on the green “Take me to Schedule F.2” button from the Schedule F.1 screen (not shown) or navigating directly to Schedule F.2 using other methods. Once they get to Schedule F.2.1 they will see a screen similar to that in Fig. 6.3. If there are activated metals that were previously entered, the user can scroll down to see a summary of what was entered. The screen in Fig. 6.3 shows an example of a Schedule F section where no data has previously been entered. If the user has data that needs to be reported, the user can click on the blue “Yes” button, which will expand the screen to include the information shown below these buttons in Fig. 6.3 giving two options for reporting activated metals. Clicking the left “Add Activated Metals” button shown on the left in bottom left of Fig. 6.3 will bring up a form to fill out or clicking on the blue “Upload Data” button on the bottom right in Fig. 6.3 will navigate the user to a file upload page where they can download a a Microsoft Excel (xlsx)file that contains the allowable format as well as a link for uploading the file once it’s complete. Note that the upload also supports a Comma Separated (csv) or a tab separated (tab) file in addition to Excel files.

Fig. 6.3: Schedule F.2.1 Stored GTCC Activated Metals Front Screen

All data for other F Schedules, Schedule F.2.2 Stored Process Waste/Other Waste, Schedule F.3.1 Projected GTCC Activated Metals, and Schedule F.3.2 Projected GTCC Process Waste/Other Waste, have the same process for entering data as that shown for Schedule F.2.1.

6.1 Schedule F Comments

Finally, user will be directed to the comment section for Schedule F. Users provide any comments concerning GTCC Waste (Section F.1 through F.3). Users should label comments by the Schedule and Item Number to which they refer. To enter and edit comments, users click the “Edit Comments”, similar to button in Fig. 5.7 shown in previous chapter. After completing the comments, proceed to data certification.

RESET TO BASE DATA

A user can revert all changes by using the “Reset to Base Data” function. This will erase all changes that were entered since the initial data status for the current survey period. The purpose of this function is to delete all changes made as a practice or for training purposes or to correct a mistake or series of mistakes during data entry. To access this menu, a user clicks on the green “My GC-859” button at the upper left-hand part of the screen, circled in Fig. 7.1 in red (1). The user then clicks on “Reset to Base Data” circled below in red circle (2).

Fig. 7.1: Access the Reset to Base Data Function

To prevent an accidental loss of data, the user is asked twice to confirm the data reset. In the first window, shown in figure Fig. 7.2, click “Proceed” to continue restoring to base data.

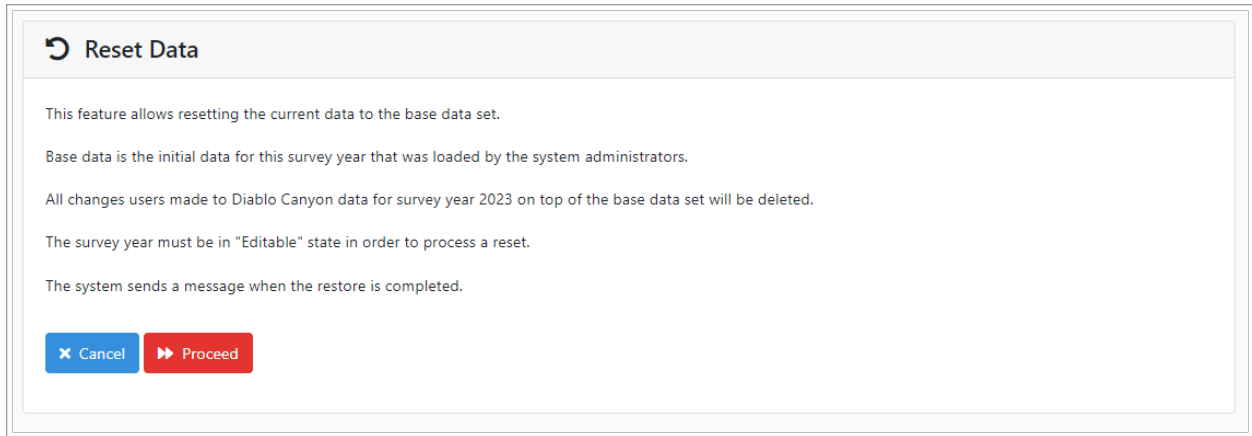

Fig. 7.2: Reset Data Screen

After clicking “Proceed”, a pop-up window Fig. 7.3 will show up, asking for an additional confirmation.

Fig. 7.3: Reset Data Po-pup Screen

After clicking “OK”, a final window in Fig. 7.4 initiates the reset process by putting system into a maintenance mode. Press Home to return to main dashboard.

Fig. 7.4: Reset Data Confirmation Window

This process should only take few minutes. *Please refrain from making changes to the system at this time.* Check email address associated with your user name for a message stating that system was reverted back from Maintenance mode to Editable mode. Example of the email is in Fig. 7.5. This step completes the reset process.

Fig. 7.5: Reset Data Confirmation Email

To abandon data restoration process, click “Cancel” in figure Fig. 7.2 which returns the user to the main dashboard. Or click “Cancel” in the pop menu in Fig. 7.3 and then “Cancel” in the reset data screen in Fig. 7.2.

Note: *Using the data reset function after transferring the fuel in schedule C.1.4 may result in loss of data. Coordinate with the site administrator on this specific case.*

REQUIRED ENTRIES

On the input form some of the entries are required and some maybe optional. The required entries are marked either by an asterisk next to the header or described below the text field. A detailed contextual description of the required field can be shown by hovering the cursor over the asterisk. Alternatively, a description of the required field is shown below the input field. Examples of required fields are highlighted red in Fig. 8.1.

The screenshot shows a form titled "Create Contact for Palo Verde". It contains five input fields: "First Name", "Last Name", "Contact Title", "Contact Phone", and "Contact Email". The "First Name" and "Last Name" fields are marked with an asterisk (*). A tooltip is visible over the "Last Name" asterisk, displaying the text "Last Name (required)". Below the "Contact Phone" field, there is a red bracketed note: "This field is required if you do not specify an email address." Below the "Contact Email" field, there is another red bracketed note: "This field is required if you do not specify a phone number." The "First Name" and "Last Name" fields are highlighted with a red border.

Fig. 8.1: Example of Required Fields

If the required field is not filled, an error message will be show upon submitting the form to the system. The system will not proceed until the required entries are provided. The following two figures Fig. 8.2 and Fig. 8.3 present the errors returned upon submitting an empty required field.

The screenshot shows the same "Create Contact" form. The "First Name" field is filled with "Peter". The "Last Name" field is empty. A red oval highlights an error message box that appears over the "Last Name" field, containing an exclamation mark icon and the text "Please fill out this field." The "Contact Title" field is also visible and empty.

FAST TRACK SUBMISSION - NO NEW DATA TO REPORT

In cases with no new data to report for example for plants that were shutdown for an extended period of time, a fast track submission is available. The respondent is required to review and update Schedule A. If there have been no changes to data in Schedules B through F since the last survey, the respondent can proceed to the Data Certification page using the button circled in red in [Fig. 9.1](#). This case may apply to plants shutdown for extended period of time or when since the last survey:

- No spent nuclear fuel (SNF) or high level waste (HLW) was discharged from the reactor to the spent fuel pool (Schedule B, C);
- No SNF and HLW transferred from wet storage to dry storage (Schedule D);
- There were no changes the capacities wet and dry storage (Schedule D);
- No SNF, HLW, or dry storage canisters were transferred off-site (Schedule C, D);
- No changes were made to non-fuel data (Schedule E);
- And no changes have been made to stored or projected GTCC waste (Schedule F).

Schedule A

This section covers Site Operator Data at Palo Verde.

Here's what we need to accomplish in this section:

1. Most information in this schedule **should be pre-filled** based on historic data. **Review sections A.1.1, A.1.2, and A.1.3 for incorrect information.** If something's wrong, we'll need an administrator to fix your facility's base data.
2. To make changes to the Site Operator data, click the **Manage Contacts** button.

3. You have already specified a site contact in [A.2.0](#). You can modify/correct pre-filled data if needed.

 It looks like you've completed this section!

Once you're sure this information is correct, we will move to **Schedule B: Reactor Data**.

 **No New Data to Report**

If there are no changes to data in *Schedules B through F* since the last survey proceed to Data Certification. This case may apply to plants shutdown for extended period of time and where:

- no spent nuclear fuel (SNF) or high level waste (HLW) was discharged from the reactor to the spent fuel pool (Schedule B, C),
- no SNF and HLW transferred from wet storage to dry storage (Schedule D),
- capacities of wet and dry storage were not changed (Schedule D),
- no SNF, HLW or dry storage canisters were transferred off-site (Schedule C, D),
- no changes were made to non-fuel data (Schedule E),
- and no changes were made to stored or projectd GTCC waste (Schedule F).

On the certification page confirm that no data are Modified or Added in Summary data table.

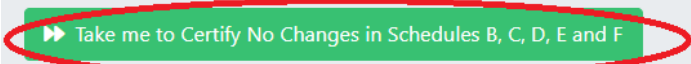

Fig. 9.1: Fast Track Submission - No New Data to Report

Note that the button in Fig. 9.1 will only display if the contacts are entered correctly in the contact management page. If the contacts are entered and there are no changes to report in Schedules B through F, proceed to the data certification page. On the certification page, confirm that no data has been Modified or Added in the Summary data table (all 0 in both columns) as shown in Fig. 9.2 below.

🔍 Certify My Data

Summary

Schedule	Base Data	Modified	Added	Total
B.3: Cycle Data	17	0	0	17
C.1.1: Assembly Data	1243	0	0	1243
D.3.2: Multi-Assembly Canisters	39	0	0	39
D.3.3: Assemblies in Dry Storage	1243	0	0	1243
E.2: Non-Fuel Component Integrals	608	0	0	608
E.3: Non-Fuel Components (Canned)	0	0	0	0
E.4: Non-Fuel Components (Uncanned)	0	0	0	0
F.2.1: GTCC Activated Metals	1	0	0	1
F.2.2: Process Waste/Other Waste	0	0	0	0
F.3.1: Projected GTCC Activated Metals	0	0	0	0
F.3.2: Projected Process Waste/Other Waste	0	0	0	0

No data added or modified

NOTICES

Legislative Authority

Data on this mandatory form are collected under authority of the Federal Energy Administration Act of 1974 (15 USC Schedule 761 et seq.), and the Nuclear Waste Policy Act of 1982, as amended (42 USC 10101 et seq.). Failure to file after receiving Energy Information Administration (EIA) notification may result in criminal fines, civil penalties and other sanctions as provided by the law. Data being collected on this form are not considered to be confidential.

Title 18 U.S.C. 1001 makes it a criminal offense for any person knowingly and willingly to make to any Agency or Department of the United States any false, fictitious, or fraudulent statements as to any matter within its jurisdiction.

Public Reporting Burden

The public reporting burden for this collection of information is estimated to average 90 hours per response. The estimate by respondent category is 100 hours per response for operating nuclear reactors, 60 hours per response for permanently shutdown nuclear reactors, and 40 hours per response for storage facilities and research/test reactors. The estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to the Energy Information Administration, Office of Survey Development and Statistical Integration, EI-21, 1000 Independence Avenue, S.W., Washington, DC 20585, and to the Office of Information and Regulatory Affairs, Office of Management and Budget, 735 17th Street, N.W., Washington, DC 20503.

Unsolicited and Prohibited Data

Information regarding security measures or material control and accounting procedures is not solicited; inclusion of such information in this data is specifically prohibited.
