Last chance to fill out our Fisherman Feedback tool on red snapper. Let us know what you've noticed about the fishery so we can share your perspective with the scientists and managers as they conduct a red snapper stock assessment.

Joey Rodriguez

We have been telling you all for years that Snapper have demolished fishing spots and have taken over rigs and wrecks. They are aggressive and invasive. We can't even target other fish that we used to target. Even in 500' of water. There needs to be a 5 fish per person limit all year long for several years. Even the private party study showed your assessments were off by over 100 million.
