Abstract: Sections 504 and 508 of the Rehabilitation Act of 1973, require equivalent access for persons with disabilities to public facilities, learning materials, and other types of information resources. Traditionally, National Park Service brochures combine text, illustrations, photographs, and maps to provide an overview of the park's history and significance. Nearly 80% of park visitors report looking at the park's printed brochure as the most common activity at any NPS site. The industry and academic research about the quality and modalities used to develop and deliver audio descriptions are limited. More than often the techniques focus on video and live performance, versus static material such as print brochures or two-dimensional exhibits. The NPS is working in partnership with the UniDescription research project at the University of Hawaii to conduct focus groups and user evaluations of digital content, web tools, and mobile apps designed to address and develop alternate formats that will make equivalent experiences and information in print materials accessible. Audio Descriptions will be created and designed to make information in print materials accessible to people who are blind, have low vision or have a print disability.
