c. Describe the purpose of this DoD information system or electronic collection and describe the types of personal information about individuals collected in the system.

Shore Application-- Machine Specific. Public Safety Devices Badge readers and sensors permit access of authorized personnel to controlled areas, relay door status, intrusion detection and alarms to the server. This information is relayed to NMCI computers at manned security points to facilitate real-time electronic monitoring of unmanned access points and buildings. System is monitored around-the-clock to enable immediate response in case of unauthorized access.

System consists of a network of electronic door switches, badge readers, and video cameras which provide input to a central server for processing by the software whose central server is located at the command's server farm at Fleet Readiness Center South East, NAS Jacksonville, FL. The data provided by input devices is then transmitted to NMCI computers at manned security points. Data is also recorded to an internal database; with video input recorded on tape, to be used for statistical information on personnel access to controlled areas, and investigative purposes. The CCURE server is within the command's accreditation boundary and is included in the CCURE ATO package (emass #4446).

PII collected from military and civil service only consist of: Full name, date of birth, photo, citizenship, employment information to include rank/grade, employee's home/ mailing address, home and official duty telephone number(s), emergency contact information, employment information: Supervisor name and work phone number is collected and other information: Spouse information may be collected if applicable for access to controlled FRCSE spaces.
