### Awardee Lead Profile Assessment (ALPA)

Form Approved  
OMB No.: 0920-1215  
Expiration Date:  
03/31/2024

Below is the Centers for Disease Control and Prevention's (CDC) annual assessment for state and local childhood lead poisoning prevention programs (programs).  
You have been asked to take part in this assessment as a state or local public official operating in your official capacity as decision-maker within a program.  
The purpose of the assessment is to identify 1) jurisdictional legal frameworks governing CDC-funded programs in the United States, and 2) strategies for implementing childhood lead poisoning prevention activities in the United States.  
This information collection will allow the CDC Childhood Lead Poisoning Prevention Program (CDC CLPPP) to identify specific factors that may support or hinder the efforts of public health agencies engaged in lead poisoning prevention. The information collection will inform guidance, resource development and technical assistance activities the CDC CLPPP conducts in support of the ultimate goal of lead elimination. Assessment findings will be shared with key stakeholders, placed on CDC's CLPPP website, and used to respond to inquiries by the public, media, and Congress.  
The data will be kept secure throughout the analysis and reporting process.  
This assessment should take no more than 47 minutes to complete. You may stop taking the assessment and finish it at a later time. To re-enter the web survey, the tool will provide you with a unique link and passcode for return access. Please refer to the Awardee Lead Profile Assessment (ALPA) training manual for instructions on answering each question. Each text box has a character limit of 200 characters.  
Please complete the assessment by [INSERT DATE].  
Participation is required for satisfactory performance. No individually identifiable information will be requested. If you have programmatic questions, you can contact CDC CLPPP via your Project Officer.

Please choose one option to continue:

Select ▼

CDC estimates the average public reporting burden for this collection of information as 47 minutes per response, including the time for reviewing instructions, searching existing data/information sources, gathering and maintaining the data/information needed, and completing and reviewing the collection of information. An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing burden to CDC/ATSDR Information Collection Review Office, 1600 Clifton Road NE, MS D-74, Atlanta, Georgia 30333; ATTN: PRA (0920-1215).

### Awardee Lead Profile Assessment (ALPA)

#### Section 5: Primary Prevention Strategy

26. Does your program conduct any of the following primary prevention activities? (Select all that apply)

- Link families with young children at high risk for lead poisoning to housing inspection and environmental intervention resources
- Evaluate lead-safe housing status of community by conducting systematic environmental investigation activities (such as lead dust wipes, visual inspections, paint chip and soil analysis) based on the high-risk status of the housing (i.e. pre-1950 housing in poor condition), compiling those data in an electronic format, and developing an ongoing evaluation component
- Have codified specifications for lead-safe housing treatments
- Lead hazard identification has been incorporated into ongoing housing code or other inspections as a result of partnerships with housing agencies
- Assure that policy changes needed to promote childhood lead poisoning prevention and lead-safe environments are recommended and supported with data
- Collaborate with other agencies and organizations and incorporate lead poisoning educational information into other health, housing, and community services that reach high-risk families
- Conduct family and community education that support primary prevention activities
- Conduct professional health education, risk communication, and/or training activities to increase lead poisoning prevention awareness
- When a child is identified with lead poisoning, require that environmental testing of adjacent units is conducted
- Require that housing units identified previously as sources for lead exposure for children are prioritized for remediation
- Lead-safe training sessions occur at least quarterly
- Provide resources to help families reduce lead hazards in their home
- Require that all lead abatement contractors are certified and that all renovation and other contractors who work in pre-1978 housing are trained in lead-safe work practices
- Replace lead service lines
- Replace drinking water fountains
- None of the above
