CAIRS
Computerized Accident/Incident Reporting System

The **Computerized Accident/Incident Reporting System** is a database used to collect and analyze DOE and DOE contractor reports of injuries, illnesses, and other accidents that occur during DOE operations.

The Office of Environment, Health, Safety and Security (AU) establishes expectations for occupational injury and illness recordkeeping and reporting through the development of directives and guidance. Through the Office of ES&H Reporting and Analysis, within AU, the Office provides customer-oriented assistance to help maintain consistent and accurate data recording and reporting throughout the Department.

Injury and Illness Reporting Guide - The Injury and Illness Reporting Guide provides supplemental information on recording and reporting occupational injuries and illness occurring during DOE operations.

DOE Summary Statistics - The CAIRS database is constantly being updated or revised, The Summary Statistics represent a snapshot of the information and may change. The most current information can be obtained by accessing the CAIRS database.

DOE Policies/Regulations and other Federal Regulations - Departmental memos/policies and regulatory requirements to help maintain consistent recording and reporting.
