

As part of the COVID-19 Public Education Campaign market research efforts, the Current Events Tracker (CET) is a flexible survey vehicle designed for easy addition or removal of questions as applicable to the current environment. This wave re-fields trust in CDC and HHS, pediatrician conversations, parents likelihood to vaccinate children, reasons for being likely/unlikely to vaccinate children under 5, child vaccination locations, and updated booster readiness. New or modified questions include those on chronic health conditions, perceptions of reformulated (i.e., updated) boosters, and booster message reactions.
