

As part of the COVID-19 Public Education Campaign market research efforts, the Current Events Tracker (CET) is a flexible survey vehicle designed for easy addition or removal of questions as applicable to the current environment. In this round, last week's additional questions are removed; non-substantive additions include questions previously fielded regarding COVID diagnosis/experience with COVID and perceived threat of COVID. Additionally, we are asking questions for the first time regarding mRNA vaccines as a potential cause of heart inflammation and questions regarding the Delta variant and if its existence is convincing unvaccinated people to vaccinate.
