161 new data elements that were not included in the previously reviewed ICR or approved through non-substantive change requests were added for 8 conditions: 4 new disease-specific data elements for Brucellosis, 2 new disease-specific data elements for *Candida auris*, 21 new disease-specific data elements for Carbapenemase-Producing Organisms (CPO), 1 new disease-specific data element for Carbon Monoxide Poisoning, 1 new disease-specific data element for Hepatitis, 7 new disease-specific data elements for Leptospirosis, 21 new disease-specific data elements for Melioidosis, and 104 new disease-specific data elements for Viral Hemorrhagic Fevers. Names, descriptions, value set codes (the answer list for coded data elements from CDC vocabulary server (PHIN VADS) which can be accessed at http://phinvads.cdc.gov), and justification for the addition of these new data elements are below:

| Brucellosis | |
|---|--|
| The impetus/urgency for CDC to add data elements for this condition | To make surveillance more comprehensive and informative for public health actions related to travel To provide more information about risk factors associated with traveling To harmonize collection of travel-related information amongst Message Mapping Guides (MMGs) and facilitate future jurisdiction implementation To help monitor epidemiology |

| Hepatitis | |
|---|--|
| The impetus/urgency for CDC to add data elements for this condition | The data element included in this request will contribute to enhanced surveillance efforts for those jurisdictions funded through PS21-2103 "Integrated Viral Hepatitis Surveillance and Prevention Funding for Health Departments". The data element will improve standardization of data collection for CDC surveillance and improve the overall understanding of the population and factors contributing to viral hepatitis infection. The enhanced surveillance will be more comprehensive and informative for public health actions and will improve guidance on infection control and prevention. |

| Viral Hemorrhagic | | | |
|---|---|-----------------------|-----------------------|
| Fevers | W. 1 10 1 1 CFI 1 | | |
| The impetus/urgency for CDC to add data elements for this condition | With 10 outbreaks of Ebola disease over the last five years, the risk of introduction of the ebolavirus, the group of viruses that cause Ebola disease, into the United States has resulted in the need for national notifiable disease surveillance to assist in understanding the transmission and epidemiology of the disease in U.S. jurisdictions. Due to the most recent outbreak of Sudan virus disease, a disease caused by Sudan virus (species <i>Sudan ebolavirus</i>), in Uganda, public health agencies are monitoring ill travelers returning from Uganda for signs and symptoms compatible with Ebola disease. In the event a case of Ebola disease is detected in the United States, nationwide disease surveillance is necessary to provide consistent case identification and classification, measure the potential burden of illness, characterize the epidemiology of medically attended Ebola disease in the United States, detect community transmission, and inform public health response to clusters of illness and efficacy of population-based non-pharmaceutical | | |
