## PURPOSE AND USE OF THIS DOCUMENT

This document contains data field definitions and elements for Emergency Department Visit datasets under the Tracking Program’s Nationally Consistent Data and Measure (NCDM) standards.

### Environmental Public Health Tracking, Emergency Department (Ed) Visits Data

Characteristic	Description
Data Source	State and Local Data Systems
Purpose	This data set will be used to calculate incidence measures for emergency department (ED) visits related to asthma, unintentional CO poisoning, heat stress illness, and chronic obstructive pulmonary disease as described in the Part 1 package, for use on the national public portal.
Geographic Level	The smallest geographic unit to be represented in this data set is the <b><u>census tract</u></b> .
Restrictions	<p><b>This is a restricted access data set.</b></p> <p>Data will be displayed via the national public portal only when sufficient conditions have been met to protect data privacy.</p> <p>Only registered users will have direct access to this data set via the national secure portal.</p>

**NOTE:** When preparing the data file, the sequence of data elements (i.e., field names) in the data file can be found in the schema for each health outcome.
