National Agricultural Pest Information System

National Agricultural Pest Information System (NAPIS)

NAPIS is the database for Cooperative Agricultural Pest Survey and related pest detection surveys. 6.15 million records summarize survey results for 6,465 insects, pathogens, weeds, mollusks and biological control organisms. Pest detection survey observations recorded in NAPIS emphasize exotic pests that may impact exports of U.S. agricultural products or damage agricultural production and natural resources.

Contact capsis@purdue.edu for information.
